Besides the price of our product is also reasonable, no matter the students or the employees can afford it. Free update and pass guarantee and money back guarantee is available of our product. Choose us we will help you pass your next Certification PAM-DEF Exam fast.

CyberArk Defender - PAM Sample Questions (Q49-Q54):

NEW QUESTION # 49

A Simple Mail Transfer Protocol (SMTP) integration is critical for monitoring Vault activity and facilitating workflow processes, such as Dual Control.

- A. False
- **B. True**

Answer: B

Explanation:

Explanation

According to the web search results, a Simple Mail Transfer Protocol (SMTP) integration is critical for monitoring Vault activity and facilitating workflow processes, such as Dual Control. SMTP is a protocol that enables the sending and receiving of email messages. By integrating SMTP with CyberArk Defender PAM, the Event Notification Engine (ENE) can automatically send email notifications about PAM activities to predefined users¹. For example, the ENE can notify users about password requests, password confirmations, password changes, password verifications, password reconciliations, password access, password usage, password expiration, and password violations¹. The ENE can also notify users about system events, such as Vault backup, Vault restore, Vault shutdown, Vault startup, and Vault license expiration¹. These notifications help to monitor the Vault activity and ensure compliance with the security policies.

SMTP integration is also essential for facilitating workflow processes, such as Dual Control. Dual Control is a feature that enables authorized Safe owners to either grant or deny requests to access accounts. This feature adds an additional measure of protection, in that it enables you to see who wants to access the information in the Safe, when, and for what purpose. The Master Policy enables organizations to ensure that passwords can only be retrieved after permission or 'confirmation' has been granted from an authorized Safe Owner(s). This is known as Dual Control². SMTP integration enables the ENE to send email notifications to the requesters and the confirmers about the status of the password requests. The ENE can also send reminders to the confirmers if they have not responded to the requests within a specified time period². These notifications help to streamline the workflow process and ensure timely and secure access to the accounts.

NEW QUESTION # 50

Match the built-in Vault User with the correct definition.

This user appears on the highest level of the User hierarchy and has all the possible permissions. As such, it can create and manage other Users on any level on the User hierarchy.	Drag answer here	Administrator
This user is the Identity Security Company hierarchy, enabling it to view all the Users in the Safe. The user can produce reports of Safe activities and User activities, which enables it to keep track of activity in the Safe and User requirements.	Drag answer here	Batch
This user is an internal user that cannot be logged onto and carries out internal tasks, such as automatically clearing expired user and Safe history.	Drag answer here	Master
This user has all available Safe member authorizations except Authorize password requests. This user has complete system control, manages a full recovery when necessary and cannot be removed from any Safe.	Drag answer here	Auditor

Answer:

Explanation:

This user appears on the highest level of the User hierarchy and has all the possible permissions. As such, it can create and manage other Users on any level on the Users' hierarchy.	This user appears on the highest level of the User hierarchy and has all the possible permissions. As such, it can create and manage other Users on any level on the Users' hierarchy.	Administrator
This user appears at the top of the User hierarchy, enabling it to view all the Users in the Safe. The user can produce reports of Safe activities and User activities, which enables it to keep track of activity in the Safe and User requirements.	This user is an internal user that cannot be logged onto and carries out internal tasks, such as automatically clearing expired user and Safe history.	Batch
This user is an internal user that cannot be logged onto and carries out internal tasks, such as automatically clearing expired user and Safe history.	This user has all available Safe member authorizations except Authorize password requests. This user has complete system control, manages a full recovery when necessary and cannot be removed from any Safe.	Master

NEW QUESTION # 51

You need to recover an account localadmin02 for target server 10.0.123.73 stored in Safe Team1. What do you need to recover and decrypt the object? (Choose three.)

- A. Master Password
- B. Recover.exe

- C. Recovery Private Key
- D. Vault data
- E. Server Key
- F. Recovery Public Key

Answer: B,C,D

Explanation:

Explanation

To recover and decrypt an account that is stored in a Safe, you need the following items:

* Recovery Private Key: This is a key that is used to decrypt the data stored in the Vault. It is located on the Master CD, which is a physical CD that contains the Private Recovery Key, a file named RecPrv.key.

* Recover.exe: This is a utility that is used to recover information from a Safe's external files in case of loss or corruption of that Safe. The files are decrypted and saved as readable files. The utility can be run from the command line or the graphical user interface.

* Vault data: This is the data that is stored in the Vault, such as accounts, safes, platforms, policies, users, groups, and audit records. The Vault data is encrypted using the Recovery Public Key, which is a key that is used to encrypt the data stored in the Vault. The Vault data can be recovered from the Vault server disk drive or from a backup file.
