

100% Pass Quiz 2025 Professional-Cloud-Network-Engineer: Google Cloud Certified - Professional Cloud Network Engineer Accurate Trustworthy Exam Torrent

P.S. Free & New Professional-Cloud-Network-Engineer dumps are available on Google Drive shared by Real4dumps:
<https://drive.google.com/open?id=1z12I54UZTXJUC2QQRhlb7bP9msN3Bz99>

If you study on our test engine, your preparation time of the Professional-Cloud-Network-Engineer guide braindumps will be greatly shortened. Firstly, the important knowledge has been picked out by our professional experts. You just need to spend about twenty to thirty hours before taking the Real Professional-Cloud-Network-Engineer Exam. In addition, the relevant knowledge will be easy to memorize. Learning our Professional-Cloud-Network-Engineer study quiz can also be a pleasant process. The saved time can be used to go sightseeing or have a rest.

The marketplace is competitive, especially for securing a well-paid job. Moving your career one step ahead with Professional-Cloud-Network-Engineer certification will be a necessary and important thing. How to get the Professional-Cloud-Network-Engineer exam dumps with 100% pass is also important. Google Professional-Cloud-Network-Engineer training topics will ensure you pass at first time. The experts who involved in the edition of Professional-Cloud-Network-Engineer questions & answers all have rich hands-on experience, which guarantee you the high quality and high pass rate.

Updated Professional-Cloud-Network-Engineer Trustworthy Exam Torrent Spend Your Little Time and Energy to Clear Google Professional-Cloud-Network-Engineer: Google Cloud Certified - Professional Cloud Network Engineer exam

The 24/7 support team is just an e-mail away for our customers so that they can contact us anytime. Our team will solve all of their issues as quickly as possible. Free demos and up to 1 year of free updates of our Sitecore Exams are also available at Real4dumps. Buy updated and Real Professional-Cloud-Network-Engineer Exam Questions now and earn your dream Professional-Cloud-Network-Engineer certification with Real4dumps!

Google Cloud Certified - Professional Cloud Network Engineer Sample Questions (Q228-Q233):

NEW QUESTION # 228

You are designing a new global application using Compute Engine instances that will be exposed by a global HTTP(S) load balancer. You need to secure your application from distributed denial-of-service and application layer (layer 7) attacks. What should you do?

- A. Configure VPC firewall rules to protect the Compute Engine instances against distributed denial-of-service attacks.
- B. Configure VPC Service Controls and create a secure perimeter. Define fine-grained perimeter controls and enforce that security posture across your Google Cloud services and projects.
- C. Configure a Google Cloud Armor security policy in your project, and attach it to the backend service to secure the application.
- D. Configure hierarchical firewall rules for the global HTTP(S) load balancer public IP address at the organization level.

Answer: A

NEW QUESTION # 229

You are increasing your usage of Cloud VPN between on-premises and GCP, and you want to support more traffic than a single tunnel can handle. You want to increase the available bandwidth using Cloud VPN. What should you do?

- A. Double the MTU on your on-premises VPN gateway from 1460 bytes to 2920 bytes.
- B. Create two VPN tunnels on the same Cloud VPN gateway that point to the same destination VPN gateway IP address.
- C. Add a second on-premises VPN gateway with a different public IP address. Create a second tunnel on the existing Cloud VPN gateway that forwards the same IP range, but points at the new on-premises gateway IP.
- D. Add a second Cloud VPN gateway in a different region than the existing VPN gateway. Create a new tunnel on the second Cloud VPN gateway that forwards the same IP range, but points to the existing on-premises VPN gateway IP address.

Answer: C

Explanation:

NEW QUESTION # 230

Your on-premises data center has 2 routers connected to your GCP through a VPN on each router. All applications are working correctly; however, all of the traffic is passing across a single VPN instead of being load-balanced across the 2 connections as desired.

During troubleshooting you find:

- * Each on-premises router is configured with the same ASN.
- * Each on-premises router is configured with the same routes and priorities.
- * Both on-premises routers are configured with a VPN connected to a single Cloud Router.
- * The VPN logs have no-proposal-chosen lines when the VPNs are connecting.
- * BGP session is not established between one on-premises router and the Cloud Router.

What is the most likely cause of this problem?

- A. A firewall is blocking the traffic across the second VPN connection.
- B. You do not have a load balancer to load-balance the network traffic.
- C. BGP sessions are not established between both on-premises routers and the Cloud Router.
- D. One of the VPN sessions is configured incorrectly.

Answer: B

NEW QUESTION # 231

You want to configure load balancing for an internet-facing, standard voice-over-IP (VOIP) application. Which type of load balancer should you use?

- A. TCP/SSL proxy load balancer
- B. Internal TCP/UDP load balancer
- **C. Network load balancer**
- D. HTTP(S) load balancer

Answer: C

NEW QUESTION # 232

Question:

Your organization has a hub and spoke architecture with VPC Network Peering, and hybrid connectivity is centralized at the hub. The Cloud Router in the hub VPC is advertising subnet routes, but the on-premises router does not appear to be receiving any subnet routes from the VPC spokes. You need to resolve this issue.

What should you do?

- A. Create custom routes at the Cloud Router in the hub to advertise the subnets of the VPC spokes.
- B. Create a BGP route policy at the Cloud Router, and ensure the subnets of the VPC spokes are being announced towards the on-premises environment.
- **C. Create custom learned routes at the Cloud Router in the hub to advertise the subnets of the VPC spokes.**
- D. Create custom routes at the Cloud Router in the spokes to advertise the subnets of the VPC spokes.

Answer: C

Explanation:

Creating custom learned routes at the hub's Cloud Router is required for advertising VPC spokes' subnets to the on-premises environment. This centralizes route configuration and ensures that all spoke subnet routes are propagated to the hybrid network.
