Pass your ADA-C01 exam in 2025 Smoothly!

If you are a positive and optimistic person and want to improve your personal skills, especially for the IT technology, congratulate you, you have found the right place. Snowflake exam certification as an important IT certification has attracted many IT candidates. While itPass4sure ADA-C01 real test dumps can help you get your goals. The aim of the itPass4sure is to help all of you pass your test and get your certification. When you visit our website, you will find that we have three different versions for the dumps. Then focusing on the ADA-C01 free demo, you can free download it for a try. The questions of the free demo are part of the ADA-C01 complete exam dumps, so if you want the complete one, you will pay for it. What's more, the ADA-C01 questions are selected and compiled by our professional team with accurate answers which can ensure you 100% pass.

Snowflake SnowPro Advanced Administrator Sample Questions (Q18-Q23):

NEW QUESTION # 18

When a role is dropped, which role inherits ownership of objects owned by the dropped role?

- A. The role above the dropped role in the RBAC hierarchy
- B. The SYSADMIN role
- C. The SECURITYADMIN role
- D. The role executing the command

Answer: A

Explanation:

According to the Snowflake documentation¹, when a role is dropped, ownership of all objects owned by the dropped role is transferred to the role that is directly above the dropped role in the role hierarchy. This is to ensure that there is always a single owner for each object in the system.

1: Drop Role | Snowflake Documentation

NEW QUESTION # 19

The following commands were executed:

Grant usage on database PROD to role PROD_ANALYST;

Grant usage on database PROD to role PROD_SUPERVISOR;

Grant ALL PRIVILEGES on schema PROD. WORKING to role PROD_ANALYST;

Grant ALL PRIVILEGES on schema PROD. WORKING to role PROD_SUPERVISOR;

Grant role PROD_ANALYST to user A;

Grant role PROD_SUPERVISOR to user B;

What authority does each user have on the WORKING schema?

- A. All existing tables in schema PROD. WORKING will be visible to both users.
- B. Tables created by either user A or user B will be visible to both users.
- C. Only user B can create tables, because all privileges were transferred to PROD_SUPERVISOR.
- D. Both user A and user B can create tables in the PROD. WORKING schema.

Answer: D

NEW QUESTION # 20

For Snowflake network policies, what will occur when the account_level and user_level network policies are both defined?

- A. The account_level policy will override the user_level policy.
- **B. The user_level policy will override the account_level policy.**
- C. A network policy error will be generated with no definitions provided.
- D. The user_level network policies will not be supported.

Answer: B

Explanation:

According to the Network Policies documentation, a network policy can be applied to an account, a security integration, or a user. If there are network policies applied to more than one of these, the most specific network policy overrides more general network policies. The following summarizes the order of precedence:

* Account: Network policies applied to an account are the most general network policies. They are overridden by network policies applied to a security integration or user.

* Security Integration: Network policies applied to a security integration override network policies applied to the account, but are overridden by a network policy applied to a user.

* User: Network policies applied to a user are the most specific network policies. They override both accounts and security integrations.

Therefore, if both the account_level and user_level network policies are defined, the user_level policy will take effect and the account_level policy will be ignored. The other options are incorrect because:

* The account_level policy will not override the user_level policy, as explained above.

* The user_level network policies will be supported, as they are part of the network policy feature.

* A network policy error will not be generated, as there is no conflict between the account_level and user_level network policies.

NEW QUESTION # 21

Which statement allows this user to access this Snowflake account from a specific IP address (192.168.1.100) while blocking their access from anywhere else?

- **A. CREATE NETWORK POLICY ADMIN_POLICY
ALLOWED_IP_LIST = ('192.168.1.100')
BLOCKED_IP_LIST = ('0.0.0.0/0');
ALTER USER ABC SET NETWORK_POLICY = 'ADMIN_POLICY';**
- B. CREATE NETWORK POLICY ADMIN_POLICY
ALLOWED_IP_LIST = ('192.168.1.100');
ALTER ROLE ACCOUNTADMIN SET NETWORK_POLICY = 'ADMIN_POLICY';
- C. CREATE OR REPLACE NETWORK POLICY ADMIN_POLICY
ALLOWED_IP_LIST = ('192.168. 1. 100/0') ;
ALTER USER ABC SET NETWORK_POLICY = 'ADMIN_POLICY';
- D. CREATE NETWORK POLICY ADMIN_POLICY
ALLOWED_IP_LIST = ('192.168.1.100');
ALTER USER ABC SET NETWORK_POLICY = 'ADMIN_POLICY';
User ABC is the only user with an ACCOUNTADMIN role.

Answer: A

Explanation:

Explanation

Option C creates a network policy that allows only the IP address 192.168.1.100 and blocks all other IP addresses using the CIDR notation 0.0.0.0/1. It then applies the network policy to the user ABC, who has the ACCOUNTADMIN role. This ensures that only this user can access the Snowflake account from the specified IP address, while blocking their access from anywhere else.

Option A does not block any other IP addresses, option B applies the network policy to the role instead of the user, and option D uses an invalid CIDR notation.

NEW QUESTION # 22

A user has enrolled in Multi-factor Authentication (MFA) for connecting to Snowflake. The user informs the Snowflake Administrator that they lost their mobile phone the previous evening.

Which step should the Administrator take to allow the user to log in to the system, without revoking their MFA enrollment?

- **A. Alter the user and set MINS TO BYPASS MFA to a value that will disable MFA long enough for the user to log in.**
- B. Alter the user and set DISABLE_MFA to true, which will suspend the MFA requirement for 24 hours.

- C. Instruct the user to append the normal URL with `?mode=mfa_bypass&code=` to log on.
- D. Instruct the user to connect to Snowflake using SnowSQL, which does not support MFA authentication.

Answer: A

Explanation:

Explanation

The `MINS_TO_BYPASS_MFA` property allows the account administrator to temporarily disable MFA for a user who has lost their phone or changed their phone number¹. The user can log in without MFA for the specified number of minutes, and then re-enroll in MFA using their new phone¹. This does not revoke their MFA enrollment, unlike the `DISABLE_MFA` property, which cancels their enrollment and requires them to re-enroll from scratch¹. The other options are not valid ways to bypass MFA, as SnowSQL does support MFA authentication², and there is no such URL parameter as `?mode=mfa_bypass&code=` for Snowflake³.

NEW QUESTION # 23

.....

Our content and design of the ADA-C01 exam questions have laid a good reputation for us. Our users are willing to volunteer for us. You can imagine this is a great set of ADA-C01 learning guide! Next, I will introduce you to the most representative advantages of ADA-C01 Real Exam. You can think about whether these advantages are what you need! First, we have high pass rate as 98% to 100% which is unique in the market. Secondly, the price of the ADA-C01 study materials is favourable.
