Free PDF 2025 Newest Splunk SPLK-1002: Splunk Core Certified Power User Exam Vce Torrent

For candidates who need to practice the SPLK-1002 exam dumps for the exam, know the new changes of the exam center is quite necessary, it will provide you the references for the exam. We will provide you free update for 365 days after purchasing the product of us, so you will know the latest version of SPLK-1002 Exam Dumps. What's more, our system will send the latest version to your email box automatically. You just need to receive the version.

Splunk Core Certified Power User Exam Sample Questions (Q129-Q134):

NEW QUESTION # 129

What does the following search do?

```
index=corndog type=mysterymeat action=eaten | stats count as corndog_count by user
```

- A. Creates a table that groups the total number of users by vegetarian corndogs.
- B. Creates a table of the total count of users and split by corndogs.
- C. Creates a table of the total count of mysterymeat corndogs split by user.
- D. Creates a table with the count of all types of corndogs eaten split by user.

Answer: D

NEW QUESTION # 130

Which of the following knowledge objects can reference field aliases?

- A. Calculated fields and tags only.
- B. Calculated fields and event types only.
- **C. Calculated fields, lookups, event types, and tags.**
- D. Calculated fields, lookups, event types, and extracted fields.

Answer: C

Explanation:

Field aliases in Splunk are alternate names assigned to fields. These can be particularly useful for normalizing data from different sources or simply for making field names more intuitive. Once an alias is created for a field, it can be used across various Splunk knowledge objects, enhancing their flexibility and utility.

A: Calculated fields, lookups, event types, and tags: This is the correct answer. Field aliases can indeed be referenced in calculated fields, lookups, event types, and tags within Splunk. When you create an alias for a field, that alias can then be used in these knowledge objects just like any standard field name.

* Calculated fields: These are expressions that can create new field values based on existing data. You can use an alias in a calculated field expression to refer to the original field.

* Lookups: These are used to enrich your event data by referencing external data sources. If you've created an alias for a field that matches a field in your lookup table, you can use that alias in your lookup configurations.

* Event types: These are classifications for events that meet certain search criteria. You can use field aliases in the search criteria for defining an event type.

* Tags: These allow you to assign meaningful labels to data, making it easier to search and report on. You can use field aliases in the search criteria that you tag.

NEW QUESTION # 131

Which field will be used to populate the field if the productName and productid fields have values for a given event?

```
| eval productINFO=coalesce(productName,productid)
```

- A. Neither field value will be used and the field will be assigned a NULL value for the given event.
- B. The value for the field because it appears second.
- C. Both field values will be used and the product INFO field will become a multivalue field for the given event.
- **D. The value for the productName field because it appears first.**

Answer: D

Explanation:

The correct answer is B. The value for the productName field because it appears first.

The coalesce function is an eval function that takes an arbitrary number of arguments and returns the first value that is not null. A null value means that the field has no value at all, while an empty value means that the field has a value, but it is "" or zero-length1.

The coalesce function can be used to combine fields that have different names but represent the same data, such as IP address or user name. The coalesce function can also be used to rename fields for clarity or convenience2.

The syntax for the coalesce function is:

```
coalesce(<field1>,<field2>,...)
```

The coalesce function will return the value of the first field that is not null in the argument list. If all fields are null, the coalesce function will return null.

For example, if you have a set of events where the IP address is extracted to either clientip or ipaddress, you can use the coalesce function to define a new field called ip, that takes the value of either clientip or ipaddress, depending on which is not null:

```
| eval ip=coalesce(clientip,ipaddress)
```

In your example, you have a set of events where the product name is extracted to either productName or productid, and you use the coalesce function to define a new field called productINFO, that takes the value of either productName or productid, depending on which is not null:

```
| eval productINFO=coalesce(productName,productid)
```

If both productName and productid fields have values for a given event, the coalesce function will return the value of the productName field because it appears first in the argument list. The productid field will be ignored by the coalesce function.

Therefore, the value for the productName field will be used to populate the productINFO field if both fields have values for a given event.

- * USAGE OF SPLUNK EVAL FUNCTION : COALESCE

NEW QUESTION # 132

When multiple event types with different color values are assigned to the same event, what determines the color displayed for the event?

- A. Precedence
- B. Weight
- C. Rank
- **D. Priority**

Answer: D

Explanation:

Explanation/Reference: <https://docs.splunk.com/Documentation/SplunkCloud/8.0.2003/Knowledge/Defineeventtypes>

NEW QUESTION # 133

Which of the following statements would help a user choose between the transaction and stats commands?

- **A. The transaction command is faster and more efficient.**
- B. There is a 1000 event limitation with the transaction command.
- C. Use state when the events need to be viewed as a single event.
- D. state can only group events using IP addresses.

Answer: A

NEW QUESTION # 134

.....

If you are not aware of your problem, please take a good look at the friends around you! Now getting an international SPLK-1002 certificate has become a trend. If you do not hurry to seize the opportunity, you will be far behind others! Now the time cost is so high, choosing SPLK-1002 Exam Prep will be your most efficient choice. You can pass the SPLK-1002 exam in the shortest possible time to improve your strength.
