Latest OGA-031 Test Preparation & Exam OGA-031 Questions Pdf

The contents of OGA-031 study guide are selected by experts which are appropriate for your practice in day-to-day life. It is especially advantageous for busy workers who lack of sufficient time to use for passing the OGA-031 preparation materials. I guess no person can know the OGA-031 Exam Questions better than our experts. And we are ready to help you pass OGA-031 exam with our high-efficient exam materials by your first attempt.

The Open Group ArchiMate 3 Part 1 Exam Sample Questions (Q51-Q56):

NEW QUESTION # 51

What concept would you use to define a point of access where an application service is made available to a user?

- A. Application interface
- B. Application interaction
- C. Application function
- D. Application service

Answer: A

Explanation:

Based on the ArchiMate 3 documents or objectives, an application interface represents a point of access where an application service is made available to a user, another application component, or a node. An application interface specifies how the functionality of a component can be accessed by other elements. The notation for an application interface is a square with a small circle attached to it.

NEW QUESTION # 52

Consider the diagram:

(A diagram showing "Acquire Insurance Product" decomposed into Develop Products, Market and Sell Products, Manage Policies and Claims, and Serve Customers.) Which of the following describes the diagram?

- A. A decomposition of the course of action for acquiring insurance products.
- B. A value stream for acquiring insurance products.
- C. A sequence of capabilities for acquiring insurance products.
- D. A set of processes for acquiring insurance products.

Answer: B

Explanation:

Comprehensive and Detailed In-Depth Explanation:

This diagram represents a value stream, which is a key concept in ArchiMate 3.2. A value stream describes how value is created and delivered across a sequence of activities. It is used to represent high-level business activities that contribute to the value creation for a stakeholder or customer.

* The Acquire Insurance Product at the top level represents an end-to-end flow.

* The sub-elements (Develop Products, Market and Sell Products, Manage Policies and Claims, and Serve Customers) depict how value is progressively built through different stages.

* The dashed arrows indicate a flow of value from one stage to the next, typical in value streams.

Analysis of Answer Choices:

#A. A set of processes for acquiring insurance products##Incorrect.

* Processes are typically lower-level activities depicted using process modeling, such as BPMN or a process flow diagram.

* ArchiMate 3.2 Specification, Section 6.3.2, differentiates business processes from value streams.

#B. A sequence of capabilities for acquiring insurance products##Incorrect.

* Capabilities represent the organization's abilities rather than sequential activities.

* In ArchiMate, capabilities are more static, focusing on what the organization can do, rather than how value is delivered over time.

* ArchiMate 3.2 Specification, Section 7.3, explains the distinction between capabilities and value streams.

#C. A value stream for acquiring insurance products##Correct Answer

* A value stream represents a series of high-level activities that create value for a customer or stakeholder.

* ArchiMate 3.2 Specification, Section 8.2.4, defines value streams as sequences that deliver value incrementally.

* This exact pattern (top-level action decomposed into a structured sequence of stages) is a value stream.

#D. A decomposition of the course of action for acquiring insurance products##Incorrect.

* Course of action is a concept in Strategy Layer of ArchiMate, referring to guidelines, policies, or directions rather than a flow of activities.

* This is not a strategic breakdown, but rather a flow of value creation.

* ArchiMate 3.2 Specification, Section 7.5, states that course of action is different from a structured value creation sequence.

#C. A value stream for acquiring insurance products.

References:

- * ArchiMate 3.2 Specification: Sections 6.3.2 (Business Process), 7.3 (Capabilities), 8.2.4 (Value Streams), and 7.5 (Course of Action).
- * Archi User Guide: Value Stream modeling and decomposition principles.

NEW QUESTION # 53

Within the context of Enterprise Architecture, what are the layers that can be modeled with the ArchiMate language?

- A. Infrastructure, Operations, and Security
- **B. Business, Application, and Technology**
- C. Strategy, Portfolio, and Segment
- D. Data, Information, and Technology

Answer: B

Explanation:

Comprehensive and Detailed in Depth Explanation: The ArchiMate framework consists of three core layers:

- * Business Layer: Represents business processes, services, roles, and actors.
- * Application Layer: Describes software applications and their interactions.
- * Technology Layer: Represents infrastructure elements like servers, networks, and storage.

The ArchiMate 3.2 Specification defines these three core layers as the primary structure of Enterprise Architecture modeling.

- * Archi User Guide
- * ArchiMate 3.2 Specification

NEW QUESTION # 54

Relationships are classified in a number of categories as shown below. What are A, B and C?

- A. Passive, Behavior, Active
- B. Derived, Internal, External
- **C. Structural, dependency, dynamic**
- D. Aggregation, assignment, realization

Answer: C

Explanation:

This is because the diagram shows the three main categories of relationships in ArchiMate: structural relationships, which model the static construction or composition of concepts; dependency relationships, which model how elements depend on or use other elements; and dynamic relationships, which model the temporal or causal connections between elements.

NEW QUESTION # 55

Consider the following diagram showing a small part of ArchiSurance's Digital Customer Intimacy strategy

Which of the following describes this diagram?

- A. The Digital customer management strategy relates to the principle of Excellent online customer interaction
- **B. The Digital customer management capability realizes the outcome Excellent online customer interaction_**
- C. The Digital customer management capability achieves the goal of Excellent online customer interaction.
- D. The Digital customer management outcome is influenced by the requirement for Excellent online customer interaction.

Answer: B

Explanation:

Based on the ArchiMate 3 documents or objectives, a capability represents an ability that an active structure element, such as an organization, person, or system, possesses. An outcome represents an end result that has been achieved. A realization relationship indicates that an entity plays a critical role in the creation, achievement, sustenance, or operation of a more abstract entity. The diagram uses a realization relationship from the Digital customer management capability to the Excellent online customer interaction outcome to indicate that the capability realizes the outcome.
