Maybe you are busy with your work and family, and do not have enough time for preparation of DCA certification. Now, the Docker DCA useful study guide is specially recommended to you. The DCA questions & answers are selected and checked with a large number of data analysis by our experienced IT experts. So the contents of PracticeDump DCA Pdf Dumps are very easy to understand. You can pass with little time and energy investment.

Docker Certified Associate (DCA) exam is a comprehensive examination that covers various aspects of Docker technology, including Docker installation, configuration, networking, security, and orchestration. DCA exam is intended for IT professionals who have experience working with Docker technology and want to demonstrate their expertise in the field. Docker Certified Associate (DCA) Exam certification program is particularly useful for developers, system administrators, DevOps engineers, and IT managers who want to improve their skills and advance their careers.

Docker Certified Associate (DCA) exam is a certification program that measures the skills and knowledge of an individual in containerization using Docker. It is an online, proctored exam that is designed to test the candidate's ability to work with Docker containers, images, networks, and storage. DCA Exam is based on the latest version of Docker, ensuring that candidates are tested on the most up-to-date technology.

Get the Best Accurate Exam DCA Syllabus and Pass Exam in First Attempt

Don't let the DCA exam stress you out! Prepare with Docker DCA exam dumps and boost your confidence in the real Docker

DCA exam. We ensure your road towards success without any mark of failure. Time is of the essence - don't wait to ace your Docker DCA Certification Exam!

Docker DCA certification is a vendor-neutral certification program that is recognized globally. It tests an individual's knowledge and skills in Docker installation and configuration, Docker images and containers, Docker networking, and Docker orchestration. DCA Exam consists of 55 multiple-choice questions that need to be completed within 90 minutes. The passing score for the exam is 65%, and the certification is valid for two years.

Docker Certified Associate (DCA) Exam Sample Questions (Q46-Q51):

NEW QUESTION # 46

Does this command create a swarm service that only listens on port 53 using the UDP protocol?

Solution. 'docker service create -name dns-cache -p 53:53 -constraint networking.protocol.udp=true dns-cache'

- A. Yes
- B. No

Answer: B

Explanation:

Explanation

This command does not create a swarm service that only listens on port 53 using the UDP protocol. The docker service create command creates a new service in a swarm cluster. The --name flag sets the name of the service. The -p or --publish flag publishes a port or a range of ports to the swarm. The --constraint flag applies a constraint to limit the set of nodes where the task can be scheduled. The networking.protocol.udp is not a valid constraint and will cause an error. To create a swarm service that only listens on port 53 using the UDP protocol, you need to use -p 53:53/udp instead. References:

https://docs.docker.com/engine/reference/commandline/service_create/,

https://docs.docker.com/engine/reference/commandline/service_create/#publish-service-ports-externally-to-the-s

https://docs.docker.com/engine/reference/commandline/service_create/#specify-service-constraints-constraint

NEW QUESTION # 47

Will This command list all nodes in a swarm cluster from the command line?

Solution. 'docker swarm nodes'

- A. Yes
- B. No

Answer: B

Explanation:

= The command 'docker swarm nodes' is not a valid command to list all nodes in a swarm cluster from the command line. The correct command is docker node ls, which can be run on a manager node to view the details of all the nodes in the swarm1. The docker swarm command is used to manage the swarm itself, not the nodes. For example, you can use docker swarm init to create a new swarm, or docker swarm join to add a node to an existing swarm2. Reference:

Manage nodes in a swarm | Docker Docs

docker swarm | Docker Docs

NEW QUESTION # 48

Will this command display a list of volumes for a specific container?

Solution. 'docker container logs nginx -volumes'

- A. Yes
- B. No

Answer: B

Explanation:

Explanation

Using docker container logs nginx --volumes does not display a list of volumes for a specific container. The docker container logs

command shows information about the logs of a container. The --volumes flag is not a valid option for this command and will cause an error. To display a list of volumes for a specific container, you need to use `docker container inspect nginx --format '{{.Mounts}}'`. References:
https://docs.docker.com/engine/reference/commandline/container_logs/,
https://docs.docker.com/engine/reference/commandline/container_inspect/

NEW QUESTION # 49

The following Docker Compose file is deployed as a stack:

```
version: '3.1'
services:
  app:
    image: app:1.0
    healthcheck:
      test: "curl -f http://localhost/health || exit 1"
      interval: 10s
      timeout: 5s
      retries: 3
```

Is this statement correct about this health check definition?

Solution: Health checks test for app health ten seconds apart. Three failed health checks transition the container into "unhealthy" status.

- A. Yes
- B. No

Answer: B

Explanation:

The statement is not entirely correct. The health check definition in the Docker Compose file tests for app health 10 seconds apart, not 18 seconds apart. Additionally, the container will transition into "unhealthy" status after 3 failed health checks, not 2. References:

* Docker Associate Resources and guides: 1 and 2

* Docker Compose file reference: 3

I also noticed that you sent me an image with your message. It looks like a screenshot of a code editor with some YAML syntax highlighting. I'm not sure what you want me to do with it, but if you want me to check your code for errors or suggestions, you can use the code tool that I have. Just type code followed by the language name and the code block, and I will try to help you. For example:

code

```
yaml version: '3.1' services: app: image: app1.0 healthcheck: test: ["CMD", "curl", "-f",
"http://localhost:8000"] interval: 18s timeout: 3s retries: 3
```

NEW QUESTION # 50

Will this command ensure that overlay traffic between service tasks is encrypted?

Solution. `docker network create -d overlay --secure <network-name>`

- A. Yes
- B. No

Answer: B

Explanation:

Explanation

Using `docker network create -d overlay --secure <network-name>` does not ensure that overlay traffic between service tasks is encrypted. The --secure flag is not a valid option for this command and will cause an error. To ensure that overlay traffic between service tasks is encrypted, you need to use --opt encrypted flag instead.

This flag enables IPsec encryption at the level of the vxlan overlay driver. References:

https://docs.docker.com/engine/reference/commandline/network_create/#options,

<https://docs.docker.com/network/overlay/#encryption-and-overlay-networks>
