NEW QUESTION # 135
Which of the following is a Bluetooth network an example of?

- A. PAN
- B. WAN
- C. SAN
- D. LAN

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Bluetooth is a wireless technology designed for short-range communication between devices. It is a classic example of a Personal Area Network (PAN), which supports communication between devices like smartphones, headsets, keyboards, and mice within a few meters. PANs are smaller in scope compared to LANs or WANs.

NEW QUESTION # 136
A customer is able to print most documents with their USB inkjet printer, but the system is unresponsive when printing a certain report from a custom application. Nothing will print until the computer is restarted and the printer is power cycled. A technician remotes into the PC and confirms that the spooler stops working when this report is sent. After cleaning the spooler and reinstalling the drivers from the manufacturer's website, the issue persists. No other sites using the application report similar issues. Which of the following is most likely causing the issue?

- A. The application has a bug that the developer needs to address.
- B. The system is using the PostScript language instead of the PCL.
- C. The manufacturer is curating content before it reaches the device to preserve ink.
- D. Personal preferences have changed and documents with graphics are now online-only

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
If a print spooler crashes specifically with one application and no issue occurs on other systems, the most likely root cause is a bug within that specific application. Restarting the spooler and reinstalling drivers resolves system-wide or hardware-related issues-not app-specific failures. This indicates the application may be sending malformed print data.
