But if you get the XK0-006 certification, your working abilities will be proved and you will find an ideal job. We provide you with XK0-006 Exam Materials of high quality which can help you pass the XK0-006 exam easily. It also saves your much time and energy that you only need little time to learn and prepare for XK0-006 exam.

CompTIA Linux+ Certification Exam Sample Questions (Q11-Q16):

NEW QUESTION # 11

An administrator receives the following output while attempting to unmount a filesystem:
umount /data1: target is busy.

Which of the following commands should the administrator run next to determine why the filesystem is busy?

- A. `top -d /data1`
- B. `ps -f /data1`
- C. `lsdf | grep /data1`
- D. `du -sh /data1`

Answer: C

Explanation:

The `lsdf` command lists open files and the processes using them. Running `lsdf | grep /data1` will show which processes are keeping the `/data1` filesystem busy, preventing it from being unmounted.

NEW QUESTION # 12

A Linux administrator needs to analyze a compromised disk for traces of malware. To complete the analysis, the administrator wants to make an exact, block-level copy of the disk. Which of the following commands accomplishes this task?

- A. `cp -rp /dev/sdc/* /tmp/image`
- B. `cpio -i /dev/sdc -ov /tmp/image`
- C. `tar cvzf /tmp/image /dev/sdc`
- D. `dd if=/dev/sdc of=/tmp/image bs=8192`

Answer: D

Explanation:

The `dd` command performs a low-level, block-by-block copy of a device. Using `if=/dev/sdc` (input file) and `of=/tmp/image` (output file) with a block size (`bs`) ensures an exact replica of the disk, suitable for forensic analysis.

NEW QUESTION # 13

A systems administrator changed the file permissions on the `myfile` file:

```
$ sudo chmod g+w myfile
```

```
$ ls -l myfile
```

```
-rwxrwxr-x 1 admin editors C 2022-10-13 10:45 myfile
```

Then the administrator added an existing user `test` to the `editors` group:

```
$ sudo usermod -aG editors test
```

However, the user `test` is still unable to edit the file. Which of the following solutions will fix this issue?

- A. The file is only writable by the root user, and the user `test` needs root permissions.
- B. The group for the user `test` needs to be reloaded by running `sudo source /etc/group`.
- C. The user `test` needs to log out and log back in before editing the `myfile` file.
- D. In order to edit the file, additional permissions are required that the user `test` does not have.

Answer: C

Explanation:

Group membership is only applied at login time. Having added "`test`" to the `editors` group, they must log out and log back in before the new group permissions take effect.

NEW QUESTION # 14

A Linux systems administrator is resolving a privileged access issue for users who are members of an `admin` group. Which of the following configuration files should the administrator update so the users in the `admin` group will have root privileged access to the Linux system?

- A. `/etc/login.defs`
- B. `/etc/shadow`
- C. `/etc/group`
- D. `/etc/sudoers`

Answer: D

Explanation:

The /etc/sudoersfile controls which users and groups can elevate privileges via sudo. By adding a line such as %admin ALL=(ALL) ALL to /etc/sudoers, members of the admin group gain root-level access.

NEW QUESTION # 15

Users cannot access a server after it has been restarted. At the server console, the administrator runs the following commands:

```
$ ss -lnt
State Recv-Send-
      Q      Q      LocalAddress:PortPeerAddress:PortProcess
LISTEN  0      32      0.0.0.0:53      0.0.0.0:*
LISTEN  0     128      0.0.0.0:22      0.0.0.0:*
LISTEN  0    1024      0.0.0.0:443      0.0.0.0:*
LISTEN  0   4096      0.0.0.0:5355      0.0.0.0:*
LISTEN  0     5127.0.0.1:4711  0.0.0.0:*

$ sudo firewall-cmd --list-all
FedoraServer (active)
  target: default
  icmp-block-inversion: no
  interfaces: enp3s0
  sources:
  services: cockpit dhcp dhcpv6-client dns dns-over-tls https
  [...]

$ uptime
14:52:35 up 1 day, 3:08, 1 user, load average: 0.05, 0.07, 0.07

$ ping server1 -c 5
PING server1 (192.168.0.2) 56(84) bytes of data.
64 bytes from server1 (192.168.0.2): icmp_seq=1 ttl=64 time=0.436 ms
64 bytes from server1 (192.168.0.2): icmp_seq=2 ttl=64 time=0.644 ms
...

--- server1 ping statistics ---
5 packets transmitted, 5 received, 0% packet loss, time 4004ms
rtt min/avg/max/mdev = 0.436/0.560/0.644/0.086 ms

$ dig server1
[...]
;; QUESTION SECTION:
;server1. IN A
;; ANSWER SECTION:
server1. 0 IN A 192.168.0.2
[...]
```

Which of the following is the cause of the issue?

- A. The wrong protocol is being used to connect to the web server.
- B. The DNS entry does not have a valid IP address.
- C. The SSH service has not been allowed on the firewall.
- D. The server load average is too high.

Answer: C

CompTIA®

Explanation:

The server is running and responding to pings, and DNS resolves correctly (dig server1 → 192.168.0.2). The ss -lnt output shows SSH (port 22) is listening, but the firewall (firewall-cmd --list-all) does not list SSH among the allowed services. Therefore, external users cannot connect because the firewall is blocking SSH.

NEW QUESTION # 16

.....

Another significant challenge of undertaking a CompTIA XK0-006 exam is defining clear goals. Many students get bogged down by the volume of material they need to learn and lose sight of their goals. Thus, our CompTIA XK0-006 Real Exam Questions in three formats provide you with the clear cut XK0-006 preparation materials and defined goals to comprehensively prepare in the shortest possible time.
