Pass4suresVCE's providing learning materials can not only help you 100% pass the exam, but also provide you a free one-year update service.

## EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q58-Q63):

### NEW QUESTION # 58

Question:

What describes an incident in a storage infrastructure?

- A. Any event that prevents corrections of known errors
- **B. Unknown root cause of one or more disruptions to service**
- C. Any action that may impact the functionality of the system
- D. Support request to help access an IT resource

Answer: B

Explanation:

An incident is an unplanned disruption of a service or a reduction in its quality, often with an unknown root cause.

Incidents require immediate action to restore service.

Example: SAN switch port down, unexpected storage latency.

\* Support requests are typically service requests, not incidents.

\* Impact actions are more about changes, not incidents.

\* Events preventing corrections might be problems, not incidents.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Incident Management Processes.

### NEW QUESTION # 59

Question:

What is the first step in the machine learning process?

- A. Collecting the datasets
- B. Training the model
- C. Selecting the type of learning
- D. Analyzing the data

Answer: A

Explanation:

The first step in any ML project is to collect the datasets that will be used to train and validate the model.

This data collection step ensures you have enough representative examples.

After this, data is analyzed, learning type is chosen, and the model is trained.

### NEW QUESTION # 60

Question:

What is the role of the storage node in a backup architecture?

- A. To organize and write data to the backup device
- B. To perform data deduplication and compression
- C. To monitor the health of the backup infrastructure
- D. To manage the backup

Answer: A

Explanation:

A storage node is a component in a backup architecture that handles the actual data movement during the backup process:

It organizes the backup data stream.

It writes the data to the backup target (disk, tape, or cloud).

It does not manage policies or schedules (that's the role of the backup server or management console).

\* Option A: Monitoring is done by the backup server or management tools.

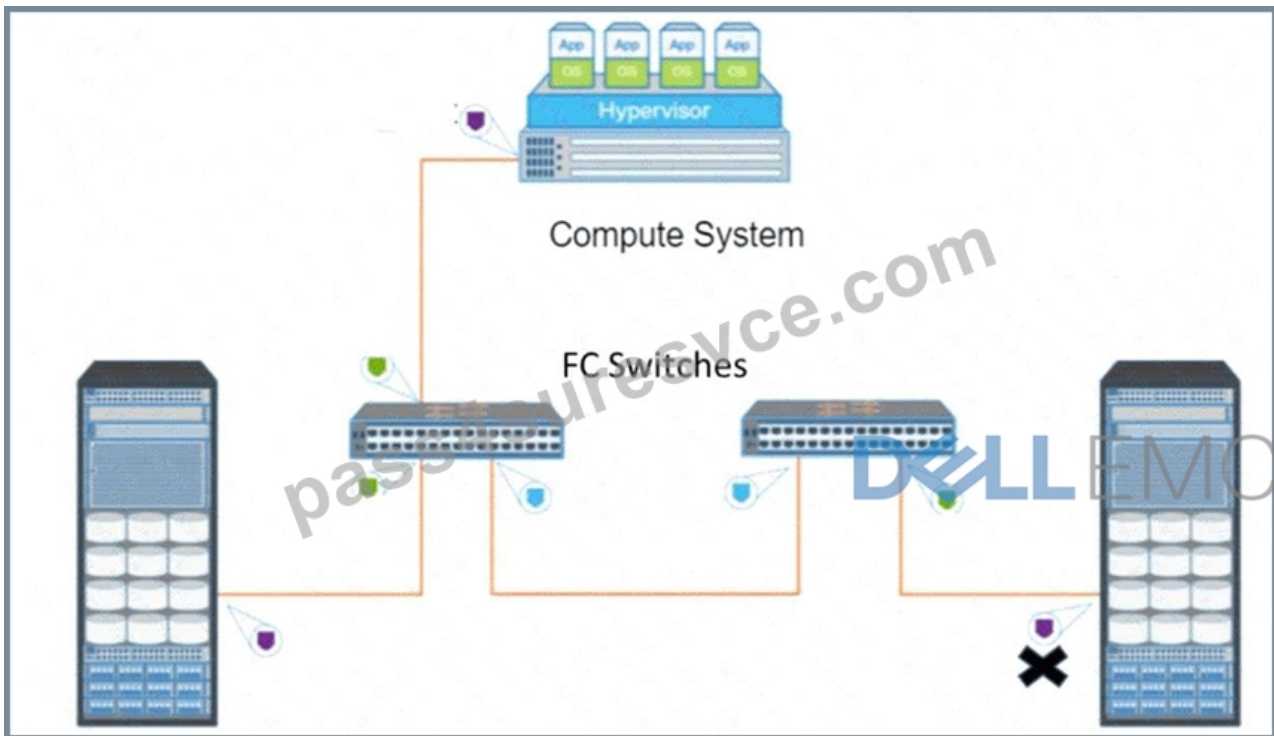

\* Option C: Backup management (scheduling, policies) is also handled by the backup server.

\* Option D: Deduplication may be part of the process but is not the primary role of a storage node.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Backup Architecture - Components.

### NEW QUESTION # 61

Question:

Refer to the Exhibit (Port marked "X"): What type of FC port does the "X" represent?

- A. N port
- **B. E\_port**
- C. NL port
- D. F\_port

**Answer: B**

Explanation:

The exhibit shows a Fibre Channel (FC) switch connected to another FC switch. The port "X" is used for inter-switch link (ISL) connectivity, which is characteristic of an E\_port (Expansion Port).

\* F\_port (Fabric port): Connects an N\_port (host or storage device) to a switch.

\* N\_port (Node port): End device port in FC networks (like HBA in hosts or storage).

\* NL\_port (Node Loop port): Used for Arbitrated Loop topologies.

\* E\_port: Connects two FC switches together for ISL, which is exactly what's shown in the exhibit.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: FC SAN Components and Topologies.

## NEW QUESTION # 62

Question:

An organization needs to adhere to compliance and lower the cost of the primary storage. What process should they implement?

- A. Data backup
- B. Data compression
- C. Data encryption
- **D. Data archiving**

**Answer: D**

Explanation:

Data archiving involves moving infrequently accessed data to a separate storage system, freeing up space on primary storage and reducing costs. It also aids in compliance by retaining data for specified periods, as required by various regulations.

\* Data backup: Creates copies of data for recovery purposes but doesn't necessarily reduce primary storage usage.

\* Data archiving: Moves less frequently accessed data to cost-effective storage, aiding compliance and reducing primary storage costs.

\* Data encryption: Secures data but doesn't impact storage costs or compliance retention.

\* Data compression: Reduces data size but may not meet compliance requirements for data retention.
