Are you tired of feeling overwhelmed and unsure about how to prepare for the ACP-120 exam? Are you ready to take control of your future and get the Jira Cloud Administrator (ACP-120) certification you need to accelerate your career? If so, it's time to visit ITexamReview and download real ATlassian ACP-120 Exam Dumps. Our team of experts has designed a ACP-120 Exam study material that has already helped thousands of students just like you achieve their goals. We offer a comprehensive Jira Cloud Administrator (ACP-120) practice exam material that is according to the content of the ACP-120 test.

The ACP-120 certification is recognized by Atlassian, the creator of Jira Cloud. Jira Cloud Administrator certification demonstrates that an individual has the skills and knowledge required to manage Jira Cloud instances effectively. Jira Cloud Administrator certification is valid for two years, after which candidates need to renew their certification by taking the ACP-120 exam again.

ATLASSIAN ACP-120 certification exam is recommended for individuals who have experience with Jira Cloud and want to demonstrate their expertise in administering Jira Cloud instances. ACP-120 exam covers a wide range of topics, including user management, project management, issue management, workflows, and customizations. ACP-120 exam also tests the candidates' ability to configure Jira Cloud for different use cases, such as software development, IT service management, and project management.

To take the exam, candidates should have a good understanding of Jira Cloud, including its features, functionalities, and workflows. They should also be proficient in managing users, groups, and permissions, as well as in customizing Jira Cloud to meet the specific

needs of their organization. ACP-120 Exam is divided into multiple choice questions and practical exercises, and candidates are given a limited time to complete it. Successful candidates will receive an ACP-120 certification, which demonstrates their expertise in Jira Cloud administration and enhances their professional credentials.

Are you still worried about not passing the ACP-120 exam? Do you want to give up because of difficulties and pressure when reviewing? You may have experienced a lot of difficulties in preparing for the exam, but fortunately, you saw this message today because our well-developed ACP-120 Exam Questions will help you tide over all the difficulties. As a multinational company, our ACP-120 training quiz serves candidates from all over the world.

ATLASSIAN Jira Cloud Administrator Sample Questions (Q14-Q19):

NEW QUESTION # 14

You have two issue types in your HR project: Hire and Fire.

Which two requirements can be met through changes only to field configurations? (Choose two.)

- A. For the Hire issue type, the field description for the Due Date field should read "First day of work".
- B. For both issue types, the Resolution should be set once the issues are being resolved.
- C. For both issue types, the Assignee field should be hidden when creating but not when viewing an issue.
- D. For the Fire issue type, the default value for the Priority field should be Blocker.
- E. For the Fire issue type, the Description field should have a default value of "Termination".
- F. For both issue types, the Employee Name custom field must be required upon creation and must never be blank.

Answer: B,C

NEW QUESTION # 15

Two projects were created as follows:

* OPS1: Created from the Procurement project template.

* OPS2: Created from the Process Control project template. You need to create project OPS3. You want it to have the same components as OPS1 but the same schemes as OPS2. How should OPS3 be created?

- A. With a shared configuration with OPS1 from the Process Control project template
- B. With a shared configuration with OPS2 from the Procurement project template

Answer: B

Explanation:

Requirements for OPS3:

* Same Components as OPS1: Components are configurations within a project, not typically part of the shared scheme setup during creation.

* Same Schemes as OPS2: Schemes (Workflow Scheme, Issue Type Scheme, Screen Schemes, Field Configuration Scheme, Permission Scheme, etc.) define the core configuration and behavior of a project.

How Project Creation Options Work:

* Creating from a Template: Sets up a project with a new set of schemes and configurations based on the chosen template. The new project does not initially share schemes with any other project.

* Creating with Shared Configuration: When you create a project and choose "Share settings with an existing project" (e.g., share with OPS2), the new project (OPS3) uses the exact same scheme objects as the existing project (OPS2). Changes to these schemes will affect both projects. This is the mechanism to ensure OPS3 has the same schemes as OPS2.

Analyzing the Options:

* with a shared configuration with OPS1 from the Process Control project template

* Shared configuration with OPS1: This would give OPS3 the same schemes as OPS1. This contradicts Requirement 2 (needs schemes from OPS2).

* from the Process Control project template: Choosing a template is generally an alternative to sharing configuration. If you share configuration, the template choice is irrelevant for the schemes. This part makes the option confusing, but the core action (sharing with OPS1) is incorrect based on the scheme requirement.

* with a shared configuration with OPS2 from the Procurement project template

* Shared configuration with OPS2: This would give OPS3 the same schemes as OPS2. This satisfies Requirement 2.

* from the Procurement project template: As above, the template choice is confusing when sharing configuration. However, the critical action (sharing schemes with OPS2) aligns with the requirement.

Addressing the Component Requirement:

Neither "creating from a template" nor "creating with shared configuration" will automatically copy the Components from OPS1 to OPS3. Components need to be set up manually within the OPS3 project after it has been created.

Conclusion:

To meet the requirement of having the same schemes as OPS2, you must create OPS3 using the "Share settings with an existing project" option and select OPS2. Option B correctly specifies sharing the configuration with OPS2.

The mention of the template in Option B is likely extraneous or indicates a slightly flawed understanding in the question's options, but the core part "shared configuration with OPS2" is the correct action to satisfy the scheme requirement. The component requirement must be handled separately after project creation.

Therefore, the correct approach described in the options is:

with a shared configuration with OPS2 from the Procurement project template

NEW QUESTION # 16

Which configurations do NOT have any impact on user notifications? (Choose one)

- A. Personal profile settings
- B. Permission schemes
- C. Custom events
- D. Workflow post functions
- E. Gadget configurations

Answer: E

NEW QUESTION # 17

Your project has three issue types that share a common workflow.

Which reason would make you recommend the implementation of separate workflows for each issue type?

- A. The issue types need different sets of resolutions.
- B. Each issue type uses a different issue security level.
- C. One of the issue types needs a new status.
- D. Different project roles are working on the issue types.
- E. The issue types need different sets of priorities.

Answer: B

NEW QUESTION # 18

Your marketing company wants to evaluate Jira and purchased a 10-user license. A frequently changing group of key stakeholders - both internal employees and external customers - will participate in the evaluation.

If the evaluation is successful the company wants all 50 employees to start working with the tool.

You have to manage the frequently changing group of stakeholders and need to make sure only the intended users participate in the evaluation.

How should you meet these requirements?

- A. Create and manage the users for stakeholders manually in the internal directory.
- B. Disable public signup and grant all project permissions to Group Anyone.
- C. Enable public signup and CAPTCHA but limit account creation to stakeholders.
- D. Connect Jira to your internal LDAP directory and whitelist the IPs of stakeholders.

Answer: B
