What is Axis ANVE Certification Exam

Axis ANVE certification exam is for individuals who are interested in pursuing a career in TV distribution, network video networking, and end-to-end performance. Those who are interested in the ANVE certification program must successfully take an examination from Axis. The exam is currently only available in English but will be translated into more languages over time. This exam is for anyone and everyone, even those who have no experience with Axis products or any type of knowledge of the technologies that are on the test. This certification exam is one of several offered to help demonstrate expertise in the realm of video and network technology, and is certified in this area is not only a great way to show off your knowledge, but can actually provide you with some benefits which are also covered in our **Axis ANVE Dumps**. For example, if you're looking for a job in the field of network video or TV distribution, it's a pretty big indicator that you know what you're talking about. And on top of that, many employers even see certifications as a way to justify giving their employees more money. If you've spent years in this field and are looking to prove your knowledge, then this is a great step towards certification. While you may already know everything that's on the test, it's always good

to have objective proof of your knowledge. This can get you promoted at work or help you land a new job with another company.

It is a generally accepted fact that the ANVE exam has attracted more and more attention and become widely acceptable in the past years.

Axis Network Video Exam Sample Questions (Q105-Q110):

NEW QUESTION # 105

Which is an impact on cameras that are operating above their specified temperature limit?

- A. Frame rate is reduced
- B. Resolution is reduced
- C. Light sensitivity is decreased
- D. Noise is increased

Answer: D

Explanation:

Operating cameras above their specified temperature limits can increase noise in the captured images. High temperatures can affect the electronic components of the camera, leading to higher thermal noise and degraded image quality. Ensuring cameras operate within their designated temperature ranges is critical for maintaining image clarity and overall performance. Refer to Axis Communications' product specifications and environmental guidelines for more information.

NEW QUESTION # 106

Which protocol helps translate a private IP address into a public IP address for public exposure on the internet?

- A. NAT
- B. DNS
- C. ARP
- D. DHCP

Answer: A

Explanation:

"NAT (Network Address Translation) is used to translate private IP addresses to public IP addresses, allowing devices on a private network to access resources on the public Internet."

- Axis Communications Academy, Network Video Fundamentals, 2022

"NAT is used in routers/firewalls to expose internal devices to the Internet."

- Axis Networking Basics Guide

NEW QUESTION # 107

A customer is not getting the storage retention they had expected while using H.264 with an AXIS Q6034-E PTZ camera on a continuous guard tour. What is the most likely cause of the problem?

- A. Using continuous guard tour does not let H.264 save as much on the compression
- B. Because most of the areas in the guard tour are empty. H.264 cannot save as much on the compression
- C. The estimation was only planned for a 720p HDTV PTZ
- D. The estimations were done in MPEG-4 and they should change the AXIS Q6034-E to run in MPEG-4 instead of H.264

Answer: A

Explanation:

Continuous guard tours involve constant movement of the camera, which limits the effectiveness of H.264 compression. H.264 achieves high compression ratios by identifying and removing redundancies between frames, but continuous motion reduces these redundancies, leading to higher bit rates and, consequently, increased storage consumption. For more details, refer to Axis Communications' technical documentation on H.264 compression and PTZ camera operations.

NEW QUESTION # 108

The capability to view and record up to four different areas of the whole image of an AXIS P1346 is called

- **A. Multi-view streaming.**
- B. Multi-link streaming.
- C. Broadcast streaming.
- D. Multicast streaming.

Answer: A

Explanation:

The capability to view and record up to four different areas of the whole image of an AXIS P1346 camera is called Multi-view streaming. This feature allows multiple cropped views to be created from a single high-resolution video stream, enabling more efficient use of bandwidth and storage while focusing on specific areas of interest within the full image. For more information, refer to the Axis Communications product documentation and technical notes on Multi-view streaming capabilities.

NEW QUESTION # 109

When focusing a camera with auto iris, focus will be more accurate if

- A. Set during bright conditions, since image contrast will not be reduced by the automatic gain control.
- **B. Set during lowlight conditions, since the depth of field is shorter with a large iris opening.**
- C. Set during lowlight conditions, since the automatic gain control will increase image contrast.
- D. Set during bright conditions, since the depth of field is shorter with a small iris opening.

Answer: B

NEW QUESTION # 110

.....

This quality of our ANVE exam questions is so high that the content of our ANVE study guide polishes your skills and widens your horizons intellectually to ace challenges of a complex certification like the ANVE Exam Certification.
