You can also trust top-notch CompTIA A+ Certification Exam: Core 1 (220-1201) exam questions and start preparation with complete peace of mind and satisfaction.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q160-Q165):

NEW QUESTION # 160

A user prints a job from a laser printer. The user wipes the page, and the words and images come off of it. The technician replaces the toner cartridge, but the issue persists. Which of the following components should the technician replace next?

- A. Discharge lamp
- **B. Fuser**
- C. Developer roller
- D. Drum

Answer: B

Explanation:

Comprehensive and Detailed In-Depth Explanation:

In laser printers, the fuser unit is responsible for melting the toner onto the paper using heat and pressure. If the toner rubs off easily, it's a clear sign the fuser is failing or not heating properly. Replacing the fuser will ensure the toner bonds correctly to the paper.

* Option B (Drum): Transfers the image, but doesn't fuse the toner.

* Option C (Developer roller): Applies toner to the drum - wouldn't cause toner to rub off.

* Option D (Discharge lamp): Prepares the drum for a new image; not related to toner adhesion.

CompTIA A+ Core 1 Exam Objective Reference:

* Objective 3.7: Given a scenario, troubleshoot common printer problems.

NEW QUESTION # 161

Which of the following provides electricity to devices through network cables?

- **A. PoE switch**
- B. Edge router
- C. Access point
- D. Patch panel

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

A PoE (Power over Ethernet) switch transmits both data and electrical power over Ethernet cables to devices like wireless access points or VoIP phones. This is especially useful in areas where separate power sources are not available.

#Reference: "CompTIA A+ Complete Study Guide" by Quentin Docter - Chapter 5, pages 319-321.

NEW QUESTION # 162

A network printer does not release a user's final print job from the queue, but the user's other print jobs successfully printed a few moments before. Other users can print without issues. Which of the following should the user check first to solve the issue?

- A. If the printer has stopped due to empty trays
- **B. If the print job is configured to a tray or manual feed**
- C. If the computer and printer are connected to the same network
- D. If the print queue is full and will not allow additional jobs

Answer: B

Explanation:

If only one print job fails and others succeed, it is often due to a paper type or tray selection mismatch for that specific job. If a print job is configured to use a tray that is empty or set to manual feed, it will not be released until resolved.

From CompTIA A+ 220-1101 Official Study Guide, Objective 4.3 - Printer troubleshooting:

"If a specific print job stalls while others succeed, check the job settings for specific tray or paper type configurations that do not match the printer's current setup." Verified Source:

* CompTIA A+ Core 1 (220-1101) Official Study Guide, Chapter 4: Printer Troubleshooting

* CompTIA Exam Objectives 220-1101, Domain 4.3

NEW QUESTION # 163

A security team wants to implement compliance controls that only permits the installation of company- approved software on user laptops. Which of the following should the IT department deploy?

- A. EDR
- B. SaaS
- **C. MDM**
- D. VPN

Answer: C

Explanation:

Mobile Device Management (MDM) allows IT departments to enforce compliance controls, such as restricting the installation of unapproved software, on laptops and mobile devices.

Why Not A (EDR): Endpoint Detection and Response focuses on detecting and mitigating security threats, not compliance controls.

Why Not B (VPN): Virtual Private Networks provide secure connections but do not enforce software installation policies.

Why Not D (SaaS): Software as a Service refers to software delivery models and does not enforce compliance controls.

CompTIA A+ Exam Reference: Core 2 (220-1102), Section 2.7, device management and security.

NEW QUESTION # 164

Users working with large files back up the files to external hard drives. One user's files take longer to back up than other users' files.

The user has tried backing up the files to other users' drives with the same results.

Which of the following steps should the technician take first to correct this issue?

- **A. Defragment the user's external hard drive.**
- B. Instruct the user to compress the files.
- C. Replace the hard drive's USB cable.
- D. Update the storage drivers on the user's system.

Answer: A

Explanation:

If a hard drive is heavily fragmented, file read/write operations can take significantly longer, causing slow backup speeds.

Defragmenting the drive organizes the data for more efficient access.

Why Not A (Replace the hard drive's USB cable): A faulty cable would typically cause disconnections or errors, not just slower speeds.

Why Not C (Update the storage drivers): This might help if the issue is with system drivers, but the described symptoms point to a fragmentation issue.

Why Not D (Compress the files): Compression reduces file size but does not address the root cause of the slow backups.

CompTIA A+ Exam Reference: Core 2 (220-1102), Section 3.1, storage troubleshooting.

NEW QUESTION # 165

.....

We provide updated and real CompTIA 220-1201 exam questions that are sufficient to clear the CompTIA A+ Certification Exam Core 1 (220-1201) exam in one go. The product of DumpsFree is created by seasoned professionals and is frequently updated to reflect changes in the content of the 220-1201 Exam Questions.
