The goal of a CompTIA CAS-004 mock exam is to test exam readiness. Lead2Passed's online CompTIA Advanced Security Practitioner (CASP+) Exam CAS-004 practice test can be accessed online through all major browsers such as Chrome, Firefox, Safari, and Edge. You can also download and install the offline version of CompTIA Advanced Security Practitioner (CASP+) Exam CAS-004 Practice Exam software on Windows-based PCs only. You can prepare for the CompTIA Advanced Security Practitioner (CASP+) Exam exam without an internet connection using the offline version of the mock exam.

CompTIA Advanced Security Practitioner (CASP+) Exam Sample Questions (Q45-Q50):

NEW QUESTION # 45

A network administrator for a completely air-gapped and closed system has noticed that anomalous external files have been uploaded to one of the critical servers. The administrator has reviewed logs in the SIEM that were collected from security appliances, network infrastructure devices, and endpoints. Which of the following processes, if executed, would be MOST likely to expose an attacker?

- A. Reconfiguring the SIEM connectors to collect data from the perimeter network hosts
- B. Implementing integrity checks on endpoint computing devices
- C. Looking for privileged credential reuse on the network
- D. Reviewing video from IP cameras within the facility

Answer: C

Explanation:

Looking for privileged credential reuse on the network is the most likely process that would expose an attacker. The anomalous external files on the server suggest that the attacker gained access to the system. Therefore, the attacker must have had privileged credentials or access that allowed them to upload the files. By looking for privileged credential reuse on the network, the administrator can identify any credentials that have been compromised and potentially used by the attacker to gain access to the system. This information can be used to revoke compromised credentials, change passwords, and implement additional security measures to prevent future attacks.

NEW QUESTION # 46

A user from the sales department opened a suspicious file attachment. The sales department then contacted the SOC to investigate a number of unresponsive systems, and the team successfully identified the file and the origin of the attack. Which of the following is the NEXT step of the incident response plan?

- A. Containment
- B. Recovery
- C. Remediation
- D. Response

Answer: A

NEW QUESTION # 47

An ASIC manufacturer wishing to best reduce downstream supply chain risk can provide validation instructions for consumers that:

- A. Include schematics traceable via X-ray interrogation.
- B. Incorporate MD5 hashes of the ASIC design file.
- C. Leverage physically uncloneable functions.
- D. Analyze an emplaced holographic icon on the board.

Answer: C

Explanation:

Physically uncloneable functions (PUFs) are hardware-based features that leverage intrinsic physical properties of chips to create unique, non-reproducible identifiers. This reduces supply chain risks by enabling robust authentication and counterfeit prevention. This method aligns with CASP+ objective 4.3, which focuses on secure hardware design and supply chain risk management, ensuring authenticity and integrity of hardware components.

NEW QUESTION # 48

An internal security assessor identified large gaps in a company's IT asset inventory system during a monthly asset review. The assessor is aware of an external audit that is underway. In an effort to avoid external findings, the assessor chooses not to report the gaps in the inventory system. Which of the following legal considerations is the assessor directly violating?

- A. Due process
- B. Due notice
- **C. Due care**
- D. Due diligence

Answer: C

Explanation:

Due care refers to the effort made by an ordinarily prudent or reasonable party to avoid harm to another party.

By not reporting the gaps in the inventory system, the assessor is neglecting their responsibility and not exercising the due care that is expected of them, which could lead to legal ramifications for non-compliance or other security breaches.

NEW QUESTION # 49

A server in a manufacturing environment is running an end-of-life operating system. The vulnerability management team is recommending that the server be upgraded to a supported operating system, but the ICS software running on the server is not compatible with modern operating systems. Which of the following compensating controls should be implemented to BEST protect the server?

- **A. Host-based firewall**
- B. Application allow list
- C. Antivirus
- D. HIPS

Answer: A

Explanation:

host-based firewall A software application running on a single host and designed to protect only that host.

NEW QUESTION # 50

.....

Our PDF format is great for those who prefer to print out the questions. CompTIA CAS-004 dumps come in a downloadable PDF format that you can print out and prepare at your own pace. The PDF works on all smart devices, which means you can go through CompTIA CAS-004 Dumps at your convenience. The ability to print out the CAS-004 PDF dumps enables users who find it easier and more comfortable than working on a computer.
