### Google Cloud Certified - Professional Cloud Database Engineer Sample Questions (Q119-Q124):

#### NEW QUESTION # 119

Your organization is running a Firestore-backed Firebase app that serves the same top ten news stories on a daily basis to a large global audience. You want to optimize content delivery while decreasing cost and latency. What should you do?

- A. Deploy a US multi-region Firestore location.
- B. Enable serializable isolation in the Firebase app.
- **C. Build a Firestore bundle, and deploy bundles to Cloud CDN.**
- D. Create a Firestore index on the news story date.

**Answer: C**

Explanation:

A global audience strongly suggests serving content via Google's Content Delivery Network. Changing the isolation level won't decrease cost or latency

#### NEW QUESTION # 120

You are choosing a database backend for a new application. The application will ingest data points from IoT sensors. You need to ensure that the application can scale up to millions of requests per second with sub-10ms latency and store up to 100 TB of history. What should you do?

- A. Use Memorystore for Memcached, and add nodes as necessary to achieve the required throughput.
- B. Use Firestore, and rely on automatic serverless scaling.
- C. Use Cloud SQL with read replicas for throughput.
- **D. Use Bigtable, and add nodes as necessary to achieve the required throughput.**

**Answer: D**
