

100% Pass Quiz Juniper - JN0-105 - Junos, Associate (JNCIA-Junos) Useful Authentic Exam Questions

BTW, DOWNLOAD part of DumpsReview JN0-105 dumps from Cloud Storage: <https://drive.google.com/open?id=119IEET0WaD9-3VrCoURPkzBOJaDDXmIT>

We have harmonious cooperation with exam candidates. The relation comes from the excellence of our JN0-105 training materials. We never avoid our responsibility of offering help for exam candidates like you, so choosing our JN0-105 practice dumps means you choose success. Moreover, without the needs of waiting, you can download the JN0-105 Study Guide after paying for it immediately. And we have patient and enthusiastic staff offering help on our JN0-105 learning prep.

Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	• Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.
Topic 2	• Configuration Basics: Identification of the main elements for configuring Junos devices is discussed in this topic. Moreover, it describes configuring basic components of a Junos device
Topic 3	• Junos OS Fundamentals: It covers concepts, benefits, and functionality of the core elements of the Junos OS.

Realistic Juniper JN0-105: Junos, Associate (JNCIA-Junos) Authentic Exam Questions - Perfect DumpsReview Certification JN0-105 Exam

Our JN0-105 exam questions are totally revised and updated according to the changes in the syllabus and the latest developments in theory and practice. We carefully prepare the JN0-105 test guide for the purpose of providing high-quality products. All the revision and updating of products can graduate the accurate information about the JN0-105 Guide Torrent you will get, let the large majority of student be easy to master and simplify the content of important information. Our product JN0-105 test guide delivers more important information with fewer questions and answers.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q45-Q50):

NEW QUESTION # 45

You are logged in to a Junos OS device with SSH and issued the `show protocols | compare` command in the configuration, but no output is shown.

Which statement is correct in this scenario?

- A. The command only works for interface configuration differences.
- B. Someone accidentally deleted the active configuration.
- C. You must commit the configuration before any output will be shown.
- D. There are no changes to the candidate configuration.

Answer: D

Explanation:

The `show | compare` command in Junos OS is used to display the differences between the candidate configuration and the active configuration. If no output is shown when you issue this command, it means that there are no changes between the candidate configuration and the active configuration. This indicates that the candidate configuration is identical to the active configuration, and thus no differences are displayed.

NEW QUESTION # 46

Exhibit

```
policy-options {  
  policy-statement Load-Balance-Policy {  
    term Load-Balance {  
      then {  
        load-balance per-flow; accept;  
      }  
    }  
  }  
}
```

```
routing-options {  
  router-id 192.168.100.11; autonomous-system 65201; forwarding-table {  
    export Load-Balance-Policy;  
  }  
}
```

Referring to the exhibit, which two statements are correct? (Choose two.)

- A. The policy enables equal cost load balancing in the forwarding table.
- B. The policy enables per-packet load balancing.
- C. The policy enables flow-based load balancing.
- D. The policy must be applied under the protocols hierarchy.

Answer: A

Explanation:

The `load-balance per-flow` statement in the Junos OS `policy-options` configuration enables flow-based load balancing in the forwarding table. This means that the traffic is distributed across multiple paths based on flows, where a flow is typically identified by attributes such as source and destination IP addresses, and possibly layer 4 information like TCP/UDP ports. This allows for more granular and efficient utilization of available paths, avoiding overloading a single path. The policy does not enable per-packet load balancing, which would send individual packets of the same flow over different paths, potentially causing out-of-order delivery issues. The policy's placement in the `forwarding-table export` suggests it's intended to influence forwarding behavior, not just routing protocol decisions, and does not necessarily have to be applied under the protocols hierarchy.

NEW QUESTION # 47

Click the Exhibit button.

```
user@router> show route

inet.0: 13 destinations, 14 routes (13 active, 0 holddown, 0
hidden)
+ = Active Route, - = Last Active, * = Both

0.0.0.0/0          *[Static/5] 00:05:38
                   > to 172.29.1.1 via ge-0/0/3.0
```

Referring the exhibit, what does the highlighted number indicate?

- A. hop count is 5
- B. cost is 5
- C. metric is 5
- D. route preference is 5

Answer: D

Explanation:

In the exhibit shown, the highlighted number next to the route type (Static) within the square brackets indicates the route preference, also known as the administrative distance. In Junos, the route preference is a value that determines the priority of the route source. Lower numbers indicate a higher priority when the routing table is being calculated. The route preference is used to select the best route when multiple paths to the same destination exist from different routing sources. The number 5 is unusually low for a static route by default, suggesting it has been manually configured to override other route types.

NEW QUESTION # 48

Which type of device uses the destination IP address to forward packets?

- A. hub
- B. Layer 3 router
- C. repeater
- D. Layer 2 switch

Answer: B

Explanation:

A Layer 3 router uses the destination IP address to forward packets. The correct answer is A. Routers operate at Layer 3 of the OSI model and make forwarding decisions based on IP addresses. They are responsible for routing packets across different networks by examining the destination IP address contained in the packet's header.

NEW QUESTION # 49

You are configuring a firewall filter on a Juniper device.

In this scenario, what are two valid terminating actions? (Choose two.)

- A. 2discard
- B. 4accept

- C. 1 count
- D. 3next term

Answer: A,B

Explanation:

In Juniper firewall filter configurations, "discard" and "accept" are two valid terminating actions for a term within a filter. The "discard" action drops the packet, preventing it from reaching its intended destination, while the "accept" action allows the packet to pass through the filter, proceeding to its next hop or destination. "Count" is a non-terminating action that increments a counter every time a packet matches the term but does not inherently determine the packet's fate. "Next term" directs the evaluation to proceed to the next term in the filter for further processing, also a non-terminating action.

NEW QUESTION # 50

.....

If you feel nervous in the exam, and you can try us, we will help you relieved your nerves. JN0-105 Soft test engine can stimulate the real exam environment, so that you can know the procedure for the exam, and your confidence for the exam will also be strengthened. In addition, JN0-105 exam materials are high quality and accuracy, and we can help you pass the exam just one time if you choose us. We have online and offline chat service stuff, and if you have any questions about JN0-105 Exam Dumps, just contact us, we will give you reply as soon as possible.
