

100% Pass Quiz Latest Microsoft - PL-600 - Microsoft Power Platform Solution Architect Certification

P.S. Free 2025 Microsoft PL-600 dumps are available on Google Drive shared by DumpStillValid: <https://drive.google.com/open?id=1ZtYCFTUscA6HUpNCagEn-RukaXRQRsuH>

We have authoritative production team made up by thousands of experts helping you get hang of our Microsoft Power Platform Solution Architect study question and enjoy the high quality study experience. We will update the content of PL-600 test guide from time to time according to recent changes of examination outline and current policies, so that every examiner can be well-focused and complete the exam focus in the shortest time. Besides, our PL-600 Exam Questions can help you optimize your learning method by simplifying obscure concepts so that you can master better. One more to mention, with our PL-600 test guide, there is no doubt that you can cut down your preparing time in 20-30 hours of practice before you take the exam.

Microsoft PL-600 (Microsoft Power Platform Solution Architect) exam is designed to measure the candidate's ability to design, configure, and implement solutions that leverage Microsoft Power Platform technologies. Microsoft Power Platform Solution Architect certification exam is ideal for professionals who are involved in designing and implementing solutions using Microsoft Power Platform technologies, including Power BI, Power Apps, Power Automate, and Power Virtual Agents.

Microsoft PL-600 Certification Exam is a valuable credential for IT professionals who specialize in Power Platform solutions. By passing PL-600 exam, you can demonstrate your expertise and validate your skills in designing and deploying custom solutions that improve organizational productivity and efficiency.

PL-600 Valid Braindumps | Reliable PL-600 Exam Pattern

Most experts agree that the best time to ask for more dough is after you feel your PL-600 performance has really stood out. To become a well-rounded person with the help of our PL-600 study questions, reducing your academic work to a concrete plan made up of concrete actions allows you to streamline and gain efficiency, while avoiding pseudo work and guilt. Our PL-600 Guide materials provide such a learning system where you can improve your study efficiency to a great extent.

Microsoft Power Platform Solution Architect (PL-600) certification exam is designed for those who have expertise in designing,

developing, and implementing solutions that run on the Microsoft Power Platform. Microsoft Power Platform Solution Architect certification validates the skills required to build and manage custom solutions using Power Apps, Power Automate, Power BI, and Power Virtual Agents. It is an excellent way to demonstrate your knowledge in the Power Platform and showcase your expertise to potential employers.

Microsoft Power Platform Solution Architect Sample Questions (Q83-Q88):

NEW QUESTION # 83

A company offers continuing education courses for medical professionals. Each time a course is offered, the company tracks that the session has taken place in an Excel workbook.

The company maintains a list of required qualifications for an educator to teach a course. Educator qualifications range from languages spoken to advanced degrees.

The company needs the following custom table relationships defined:

Associate educators with a list of their professional qualifications.

Assign a primary educator to each course that is held.

Collect information about every course that is held.

You need to determine the type of relationship that best fits the requirement.

Which type of table relationship should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

| Requirement | Relationship |
|--|--|
| Educators must be associated with their qualifications. | <div>▼</div> <div>Many-to-many relationship that uses a system generated table</div> <div>Many-to-many relationship that uses a custom table</div> <div>One-to-many relationship</div> |
| When a course is held there must be a primary educator assigned. | <div>▼</div> <div>Many-to-many relationship that uses a system generated table</div> <div>Many-to-many relationship that uses a custom table</div> <div>One-to-many relationship</div> |
| When a course is held, the company needs to collect information on that session. | <div>▼</div> <div>Many-to-many relationship that uses a system generated table</div> <div>Many-to-many relationship that uses a custom table</div> <div>One-to-many relationship</div> |

Answer:

Explanation:

| Requirement | Relationship |
|--|--|
| Educators must be associated with their qualifications. | <div>▼</div> <div>Many-to-many relationship that uses a system generated table</div> <div>Many-to-many relationship that uses a custom table</div> <div>One-to-many relationship</div> |
| When a course is held there must be a primary educator assigned. | <div>▼</div> <div>Many-to-many relationship that uses a system generated table</div> <div>Many-to-many relationship that uses a custom table</div> <div>One-to-many relationship</div> |
| When a course is held, the company needs to collect information on that session. | <div>▼</div> <div>Many-to-many relationship that uses a system generated table</div> <div>Many-to-many relationship that uses a custom table</div> <div>One-to-many relationship</div> |

Explanation

Requirement

Relationship

Educators must be associated with their qualifications.

Many-to-many relationship that uses a system generated table
Many-to-many relationship that uses a custom table
One-to-many relationship

When a course is held there must be primary educator assigned.

Many-to-many relationship that uses a system generated table
Many-to-many relationship that uses a custom table
One-to-many relationship

When a course is held, the company needs to collect information on that session.

Many-to-many relationship that uses a system generated table
Many-to-many relationship that uses a custom table
One-to-many relationship

Reference:

Box 1: One-to-many relationship

Each educator can have 0, 1, or many qualifications

Box 2: One-to-many relationship

Each educator can be the primary educator for 0, 1 or many courses.

Box 3: Many-to-many relationship that uses a custom table.

Note: N:N (Many-to-Many): A table relationship that depends on a special Relationship table, sometimes called an Intersect table, so that many rows of one table can be related to many rows of another table.

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/data-platform/create-edit-entity-relationships>

NEW QUESTION # 84

An animal welfare organization wants to track the movement of wolf packs in a region. Cameras at specific locations capture images when motion is detected within the camera sensor range. Staff upload the images manually to a shared drive and then analyze the images.

The organization wants to automate image capture and analysis. The organization has the following requirements:

- * Save captured images in an appropriate location.
- * Analyze saved images by using an image recognition process.
- * Display data in real-time dashboards.

You need to recommend the correct technology for the requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement

Technology option

Save captured images in an appropriate location.

Business process flow
Desktop flow
Instant cloud flow
Automated cloud flow

Analyze saved images by using an image recognition process.

Instant cloud flow and AI Builder
Automated cloud flow and AI Builder
Desktop flow and AI Builder

Display data in real-time dashboards.

Dynamics 365 interactive experience dashboard
Model-driven app dashboard with native graphs
Model-driven app dashboard with Power BI

Answer:

Explanation:

| Requirement | Technology option |
|---|--|
| Save captured images in an appropriate location. | Business process flow Desktop flow Instant cloud flow Automated cloud flow |
| Analyze saved images by using an image recognition process. | Instant cloud flow and AI Builder Automated cloud flow and AI Builder Desktop flow and AI Builder |
| Display data in real-time dashboards. | Dynamics 365 interactive experience dashboard Model-driven app dashboard with native graphs Model-driven app dashboard with Power BI |

Explanation:

| Requirement | Technology option |
|---|--|
| Save captured images in an appropriate location. | <div>▼</div> <div>Business process flow</div> <div>Desktop flow</div> <div>Instant cloud flow</div> <div>Automated cloud flow</div> |
| Analyze saved images by using an image recognition process. | <div>▼</div> <div>Instant cloud flow and AI Builder</div> <div>Automated cloud flow and AI Builder</div> <div>Desktop flow and AI Builder</div> |
| Display data in real-time dashboards. | <div>▼</div> <div>Dynamics 365 interactive experience dashboard</div> <div>Model-driven app dashboard with native graphs</div> <div>Model-driven app dashboard with Power BI</div> |

Box 1: Automated cloud flow.

Create a cloud flow when you want your automation to be triggered either automatically, instantly, or via a schedule.

Automated flows: Create an automation that is triggered by an event such as arrival of an email from a specific person, or a mention of your company in social media.

Box 2: Desktop flow and AI Builder

Desktop flows are used to automate tasks on the Web or the desktop. Using Power Automate Desktop you can automate tasks on the desktop as well as the Web.

Box 3: Model-driven app dashboard with Power BI

The Power BI cloud service works with Microsoft Dataverse apps to provide a self-service analytics solution.

Power BI automatically refreshes the app's data displayed.

Reference:

<https://docs.microsoft.com/en-us/power-automate/flow-types>

<https://docs.microsoft.com/en-us/powerapps/maker/model-driven-apps/use-power-bi>

NEW QUESTION # 85

A company plans to use Microsoft Power Platform.

The company needs to understand how API requests are used so that its solution can be designed within the API limits granted by Microsoft. The company requires the following information:

- * How API limits are allocated
- * Which Microsoft Power Platform components count toward its API limits
- * Which Power Automate flow steps count toward API limits

You need to describe the API allocation for each design consideration.

Which API allocations should you identify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Design consideration

How API limits are allocated

Which Microsoft Power Platform components count toward API limits

Which Power Automate flow steps count toward API limits

API allocation

By license

By app

By tenant

By license

By environment

Dataverse, Power Apps, and Power Automate

Dataverse, Power Apps, and Power BI

Power Apps, Power BI, and Power Pages

Dataverse, Power Apps, and Power Automate

Each step counts as one API request.

Each step counts as one API request.

Each flow run counts as one API request.

Only successful steps count as one API request.

Only successful flows count as one API request.

Answer:

Explanation:

Answer Area

Design consideration

How API limits are allocated

Which Microsoft Power Platform components count toward API limits

Which Power Automate flow steps count toward API limits

API allocation

By license
By app
By tenant
By license

Dataverse, Power Apps, and Power Automate

Each step counts as one API request.
Each step counts as one API request.
Each flow run counts as one API request.
Only successful steps count as one API request.
Only successful flows count as one API request.

Explanation

Answer Area

Design consideration

How API limits are allocated

Which Microsoft Power Platform components count toward API limits

Which Power Automate flow steps count toward API limits

API allocation

By license

Dataverse, Power Apps, and Power Automate

Each step counts as one API request.

NEW QUESTION # 86

You need to recommend a collaboration tool for each group.

Which tool should you use? To answer, select the appropriate tool in the answer area.

NOTE: Each correct selection is worth one point.

| Group | Tool |
|------------------------------|---|
| Maintenance supervisors | <p>Microsoft Teams Notes Power Apps portal Posts</p> |
| Aircraft maintenance vendors | <p>Dynamics 365 Workspace Notes Power Apps portal Posts</p> |

Answer:

Explanation:

| Group | Tool |
|------------------------------|---|
| Maintenance supervisors | <div>▼</div> <div>Microsoft Teams</div> <div>Notes</div> <div>Power Apps portal</div> <div>Posts</div> |
| Aircraft maintenance vendors | <div>▼</div> <div>Dynamics 365 Workspace</div> <div>Notes</div> <div>Power Apps portal</div> <div>Posts</div> |

Explanation:

Box 1: Microsoft Teams

Maintenance supervisors must not have access to Dynamics 365 Customer Service. The supervisors must be able to communicate with the contracts team about contracts.

Box 2: Dynamics 365 Workspace

Aircraft maintenance vendors must have only view and upload privileges to their invoices and receipts.

The Expense management mobile workspace lets users capture and upload a receipt, so that they can attach it to an expense report later.

Reference:

<https://docs.microsoft.com/en-us/dynamics365/project-operations/prod-exp/expense-management-mobile-workspace>

Topic 2, First Up Consulting

Case study

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Background

First Up Consulting recruits information technology (IT) workers for temporary or permanent positions at client companies. The company operates offices in multiple countries/regions.

First Up has both full-time and part-time employees. The company has a team of worker support agents that respond to inquiries from current and prospective workers. Some of the worker support agents are multilingual.

The company does not have a standardized tool used for reporting purposes. The organization engages you to implement a new Power Platform solution. Workers are managed by a dedicated team that includes one primary recruiter and a contract assistant. Many client companies live in areas that do not allow for mobile data connections.

Current environment

Existing systems and processes

* First Up uses an on-premises system to manage current and historical patient data including medications and medical visits.

* The company plans to reference historical data in the existing system. The records held in these systems will not be migrated to the new solution except for medication information.

* Employee authentication with the existing system is provided by an on-premises Active Directory instance that is linked to Azure Active Directory.

* An appointment record is created for each visit with a worker. The record includes worker contact information, preferred language, the date and time of the appointment, and other relevant data. This information is reviewed by the worker's primary recruiter.

* First Up has no current capabilities for forecasting future worker needs based on the data held.

Client company visits

Before First Up signs a contract to place workers at a client company, a member of the audit team visits the company and interviews company management. Audit members use different types of devices including Android and iOS devices. First Up has no plans to require the use of a single type of device. Audit team members currently record information about workers on paper forms. Team members enter information from paper forms into the system when they return to the office.

First Up audits client companies at least once each year but may schedule additional visits based on feedback from workers that they place at a client company.

Requirements

General

* There is no standardized communication tool across the company, and this causes communication issues between different teams.

* First up employees must be able to contact each other by using a secure system to ask and answer questions about medical cases.

* Workers must be able to communicate in near real-time with worker support agents.

Client company visits

* Audit team records must be locked after they have been reviewed by a First Up manager. No further edits to the record can be carried out. This must be implemented using standard available system functionality.

* Audit teams must be able to enter records of their visits to the companies where they have or may place workers. Audit teams must be able to update any necessary records with the latest information.

* The solution must support tracking of security clearance information for a worker including the date, status, and certifying agency.

* When a worker makes an appointment, the appointments must appear in the timeline for the worker's contact record.

Job history information

* The solution must provide a worker appointment booking system that can access worker historical job placement data.

* The solution must allow employees to associate a primary recruiter with each worker. The solution must also allow multiple secondary recruiters to be associated with each worker.

* Every worker assessment performed must be validated and countersigned by the primary recruiter for a worker.

* Job posting data from previous work engagements must be accessible by the Power Platform solution to ensure that new job postings are accurate.

* First Up staff members must be able to view and update worker records. They must be able to see current and historical job placement data on the same form in the new solution.

Worker access

* The solution must support workers that speak different languages. The solution must provide automatic translation capabilities.

* The solution must support near real-time communications between workers and recruiters.

* Workers must be able to view their records online. Workers must be able to enter any additional information that is required by or may be helpful to recruiters.

* The solution must provide workers a way to search for general information about available positions.

* Workers must be able to request copies of their records by using a chatbot. Workers must be able to provide information to a recruiter as needed.

Data platform

* Audit teams must have the ability to view worker information on their mobile devices.

* Audit teams must be able to record data during visits to locations where workers are placed.

* The solution must support the ability for a corporate governance auditing team to periodically audit the organization's records, policies, and procedures.

Reporting and analytics

* The reporting and analytics team must be able to create reports that include data from all facilities and all workers.

* Management reports must present an overview of the entire organization. Other reports may be limited to specific offices.

* You must create dashboards that show the status across all groups of workers. The dashboards must be embedded into the Power Platform apps. Updates to data must be displayed in near real time.

Security

* Authentication for all user types must be managed by a single platform. IT teams must use PowerShell to apply security permissions for users.

* Worker records must only be viewed by the recruiting office that the worker visits.

* Worker still records must be archived after ten years and are then removed from the main system.

Worker information must not be deleted from the system while skill and job placement history records for the worker exist in the system.

* User security roles must be customized to ensure that users are able to interact only with the specific data in which they need access.

* Workers must be able to sign into a portal by using their own email address. Workers must be required to use a secure method of authentication to be able to view their data.

* Alerts regarding the number of recruited and placed at client companies must be updated as background processes.

Issues

The organization reports the following issues:

- * Recruiters report that they cannot see historical job placement data for workers.
- * API usage reports show that the number of API calls made exceeds limits. This causes delays saving data.
- * Users cannot view Power BI reports within the Power Platform apps.
- * Some security clearance information for workers not visible from within the Power Platform solution.
- * Audit teams report that they cannot view or edit worker data when the device on which they access the solution does not have network connectivity.
- * The testing team reports that one of the canvas apps is not working as expected. An error message displays as specific pages load.

NEW QUESTION # 87

You need to recommend the field type to use for configuring meal selections during reservation.

Which field type should you recommend?

- A. Two Options
- B. Option Set
- C. Global Option Set
- D. Lookup

Answer: D

Explanation:

Scenario:

* Customers can select a meal when they make a reservation and can save the meal choices as a customer preference.

* The company offers two types of meals: standard and vegetarian. Meal types can be temporarily unavailable. The airline is considering offering other meal types, such as gluten-free and low-sodium options.

In PowerApps Option set is one of the field types you can use in your Entity. The information type that Option Set stores is a list of text values. And here comes the Option Set advantage - once you define its text values you can centrally managed it.

Example:

The screenshot shows a Microsoft PowerApps interface. At the top, there is a blue header bar with the Microsoft logo and the text "Country Name". Below the header, there is a dropdown menu that is currently open, displaying a list of countries: "Poland", "USA", "England", and "India". The dropdown menu has a light blue background and a white border. The text "Country Name" is in white, and the country names are in black. A watermark "ampstillvalid.com" is visible diagonally across the image.

Topic 1, Relecloud

Case study

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each

case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Background

Relecloud provides regional air service in North America. The company uses a variety of systems, apps, and services to manage the business. You are hired to design a new solution to manage passenger information, reservations, and maintenance.

Current environment

- * The company uses Microsoft Office 365.
- * The company has a custom app for managing and tracking passenger luggage. The app uses Microsoft Dataverse.
- * For flights longer than four hours, passengers receive a meal. Customers can select a meal when they make a reservation and can save the meal choices as a customer preference.
- * The company offers two types of meals: standard and vegetarian. Meal types can be temporarily unavailable. The airline is considering offering other meal types, such as gluten-free and low-sodium options.
- * The company uses paper-based reservation checklists to help ensure that all the steps for a reservation are complete.
- * The company uses vendors to service aircraft.

Environment

- * Ensure that employees can sign in to all Microsoft apps by using one set of credentials per employee.
- * Minimize the use of third-party products and custom development.
- * Reduce customer support call volumes by having the system automatically resolve common issues.
- * The security rule for agents must contain the privileges in the default Customer Service Representative security role.
- * Log issues as cases. The case form must show variable sections based on the case type. Include a custom entity named Seats and grant agents access to the entity.
- * Application use layout should be role specific.

Agents

- * You must standardize the format used by agents to enter customer phone numbers.
- * Agents need a solution to replace paper reservation checklists.
- * Agents need dashboards to show a current count of all reservations on the entity.
- * Agents need a way to track reservation issues.
- * Agents need a visual indicator in the interface to determine the reservation step to provide a seamless customer experience.
- * Agents need different versions of cancellation policies to send customers. One version must be controllable within the system.
- * Agents need to view which pieces of luggage match to each passenger, and then need to add the total on the passenger record.

IT

- * IT staff needs a mobile solution to see IT cases at the top of the menu since this is their primary focus.
- * IT staff needs a system that is easy to navigate to active cases.
- * IT specialists want to design Power BI reports. They need to understand the underlying table relationships of the system.
- * IT specialists need a solution that is visual rather than text-based so they can quickly complete their tasks.

Management

- * Management requires paginated reports for stakeholders.
- * Management wants to provide frequent flyers with better service when the flyers call.
- * Managers need to see all customer dashboards at the top of their menu on their mobile device.

Maintenance

- * Maintenance supervisors must not have access to Dynamics 365 Customer Service. The supervisors must be able to communicate with the contracts team about contracts.
- * Aircraft maintenance vendors must have only view and upload privileges to their invoices and receipts.
- * Contracts with maintenance companies must be stored in Dynamics 365 Customer Service.
