Test ACP-120 Centres - ACP-120 Reliable Braindumps

According to the needs of all people, the experts and professors in our company designed three different versions of the ACP-120 certification training dumps for all customers. The three versions are very flexible for all customers to operate. According to your

actual need, you can choose the version for yourself which is most suitable for you to preparing for the coming exam. All the ACP-120 Training Materials of our company can be found in the three versions. It is very flexible for you to use the three versions of the ACP-120 latest questions to preparing for your coming exam.

The Atlassian ACP-120 (Jira Cloud Administrator) Exam is an excellent opportunity for IT professionals to demonstrate their knowledge and skills in managing and administering JIRA Cloud. Jira Cloud Administrator certification is well recognized in the industry and can help candidates to stand out in the job market. ACP-120 exam is challenging, but with the right preparation and study materials, candidates can pass the exam and earn their certification.

The ACP-120 exam covers a range of topics, including user management, project configuration, issue types and workflows, and integrations with other tools. Successful candidates will have a deep understanding of the features and functionality of Jira Cloud, as well as the ability to troubleshoot issues and optimize the platform for their team's needs. Jira Cloud Administrator certification is ideal for Jira Cloud administrators, project managers, and anyone responsible for managing Jira Cloud on a day-to-day basis.

ATLASSIAN Jira Cloud Administrator Sample Questions (Q56-Q61):

NEW QUESTION # 56
You inherited a mature Jira instance with hundreds of projects and associated schemes. You are trying to optimize the administration of the instance.
You need to create a new project and determine which schemes to apply.
Select the two best approaches. (Choose two.)

- A. Use one of the project templates other than Jira Default Schemes.
- B. Create a project using the Jira Default Schemes and then create new schemes to avoid sharing conflicts.
- C. Use the Scheme Helper admin tool to see which combinations of schemes are compatible.
- D. Create a custom project template that uses the most common shared schemes.
- E. Evaluate existing shared schemes based on common project category or other criteria.
- F. Attempt to generalize existing schemes with project roles and share those.

Answer: C,E

NEW QUESTION # 57
Max wants you to change the way the system fields Created or Updated are being displayed when viewing an issue.
How can this be achieved?

- A. Adjust the jira.date.time.picker.java.format in the advanced settings configuration.
- B. Adjust the Day Format in the Jira look and Feel configuration.
- C. Adjust the jira.date.picker.java.format in the advanced settings configuration.
- D. Adjust the Complete Date/Time Format in the Jira Look and Feel configuration.
- E. Adjust the language and time zone preferences in Max's user profile.

Answer: E

NEW QUESTION # 58
You are prompted to perform a re-index after you have made configuration changes to a very large Jira instance.
Which reason would justify re-indexing only a project instead of a full re-index of the instance?

- A. Workflow changes were limited to the project's unique workflow.
- B. Time tracking was modified for the project.
- C. Only project users would be affected by the re-index.
- D. Only custom fields used by the project were modified.

Answer: D

Explanation:

NEW QUESTION # 59

Which three statements are correct about deleting a user account (Choose three)

- A. Access to all products and administration functions will be lost
- B. Individual users can delete their unmanaged accounts
- C. Organization admins can delete managed accounts
- D. Issues that were created by a deleted account will be deleted
- E. Accounts can only be deleted if they have no issues assigned

Answer: A,C,D

NEW QUESTION # 60

What is being transitioned in the last component of the rule?

- A. One or more sub-tasks
- B. A single story
- C. An epic
- D. The trigger issue
- E. Multiple stories

Answer: D

Explanation:
The automation rule in the SCRUM project triggers when an issue is transitioned, checks if an Epic exists, and includes a Related issues condition that evaluates whether Stories (or other issues in this Epic) exist. The question asks what is being transitioned in the last component of the rule. Based on the rule structure, the last component is the Related issues condition, which does not perform a transition- it only checks a condition. However, interpreting the question in the context of the entire rule, the trigger issue (Option D) is the issue being transitioned in the initial When: Issue transitioned component, and subsequent components (like conditions) do not introduce new transitions unless explicitly stated (e.g., via an action).
* Explanation of the Correct Answer (Option D):
* The rule structure is:
* When: Issue transitioned: This is the trigger, meaning the rule runs when an issue (the trigger issue) is transitioned to a new status in the workflow.
* If: Epic exists: This condition checks if the trigger issue is associated with an Epic (e.
g., it's an Epic itself or a Story linked to an Epic).
* Related issues condition: Stories (or other issues in this Epic): This condition checks if there are Stories (or other issues) related to the Epic associated with the trigger issue.
* The last component shown is the Related issues condition, which does not perform a transition-it only evaluates whether Stories exist in the Epic. However, the question likely intends to ask about the issue being transitioned in the overall rule context. The When: Issue transitioned trigger indicates that the trigger issue is the one undergoing the transition that initiates the rule.
* Since the rule does not yet include an action (e.g., transitioning related issues), the only issue being transitioned in the rule's execution is the trigger issue-the issue that was transitioned to activate the rule.
* Exact Extract from Documentation:
Jira automation components

Automation rules act on the trigger issue by default, which is the issue that activates the rule (e.g., the issue transitioned for an Issue Transitioned trigger).
* Conditions like Related issues condition check for related issues (e.g., Stories in an Epic) but do not transition issues unless an action is specified.
* Actions like Transition issue apply to the trigger issue or related issues if specified (e.

g., via a branch).Note: Without a branch or action, the rule does not transition additional issues beyond the trigger.(Source: Atlassian Support Documentation,
"Automate your Jira Cloud instance")
* Why This Fits: The trigger issue is the issue being transitioned in the When: Issue transitioned component, and the Related issues condition does not introduce a new transition. Thus, the trigger issue (Option D) is the issue being transitioned in the rule's context.
* Why Other Options Are Incorrect:
* A single story (Option A):
* The Related issues condition checks for Stories in the Epic but does nottransition them-it only evaluates their existence. The rule does not yet include an action to transition a single Story, and the trigger issue (being transitioned) is not specified as a Story (it could be an Epic or another issue type).
* Extract from Documentation:
The Related issues condition evaluates related issues but does not transition them unless an action (e.g., Transition issue) is specified.
(Source: Atlassian Support Documentation, "Jira automation conditions")
* Multiple stories (Option B):
* Similar to Option A, the rule does not transition multiple Stories. The Related issues condition only checks for Stories in the Epic, and no action is shown to transition them. The trigger issue is the one being transitioned.
* Extract from Documentation:
Transitioning multiple issues requires a branch (e.g., For Stories) and a Transition issue action, which is not present in the rule.
(Source: Atlassian Support Documentation, "Jira automation actions")
* An epic (Option C):
* The If: Epic exists condition checks for an Epic, but the trigger issue (being transitioned) could be any issue type (e.g., an Epic, Story, or Task). The rule does not specify that the trigger issue is an Epic, so this is not definite.
* Extract from Documentation:
The Issue Transitioned trigger applies to any issue type, not specifically Epics, unless filtered by a condition (e.g., Issue Type = Epic).
(Source: Atlassian Support Documentation, "Jira automation triggers")
* One or more sub-tasks (Option E):
* The rule does not mention Sub-tasks; the Related issues condition focuses on Stories in the Epic. There is no branch or action to transition Sub-tasks, and the trigger issue is the one being transitioned.
* Extract from Documentation:
To transition Sub-tasks, use a branch like For Sub-tasks with a Transition issue action, which is not present in the rule.
(Source: Atlassian Support Documentation, "Jira automation actions")
* Additional Notes:
* The rule is incomplete as shown, lacking an action (e.g., transitioning Stories or the Epic).
The question likely assumes the focus is on the trigger issue being transitioned in the When component.
* If the rule were to include an action (e.g., Transition Stories to Done), the answer might involve Stories, but the current rule stops at the condition.
* The rule is configured in Project settings > Automation and requires project admin privileges for project-level rules.
