

100% Pass Quiz Microsoft - AZ-120 - Efficient New Guide Planning and Administering Microsoft Azure for SAP Workloads Files

DOWNLOAD the newest Itcerttest AZ-120 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1s3Ccd7hHYSEsdVcRKJlw8pFknZIO9vn>

The second form is Planning and Administering Microsoft Azure for SAP Workloads (AZ-120) web-based practice test which can be accessed through online browsing. The AZ-120 web-based practice test is supported by browsers like Firefox, Microsoft Edge, Microsoft Chrome, and Safari. You don't need to install any plugins or software to attempt the AZ-120 web-based practice test. This online Microsoft AZ-120 exam is also compatible with all operating systems.

Remember that this is a crucial part of your career, and you must keep pace with the changing time to achieve something substantial in terms of a certification or a degree. So do avail yourself of this chance to get help from our exceptional Planning and Administering Microsoft Azure for SAP Workloads (AZ-120) dumps to grab the most competitive Microsoft AZ-120 certificate. Itcerttest has formulated the Planning and Administering Microsoft Azure for SAP Workloads (AZ-120) product in three versions. You will find their specifications below to understand them better.

AZ-120 Reliable Exam Topics - AZ-120 Dumps Download

For AZ-120 test dumps, we give you free demo for you to try, so that you can have a deeper understanding of what you are going to buy. The pass rate is 98%, and we also pass guarantee and money back guarantee if you fail to pass it. AZ-120 test dumps of us contain questions and answers, and it will help you to have an adequate practice. Besides we have free update for one year for you, therefore you can get the latest version in the following year if you buying AZ-120 Exam Dumps of us. Buying them, and you will benefit from them in the next year.

Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q218-Q223):

NEW QUESTION # 218

You are planning the deployment of a three-tier SAP landscape on Azure that will use SAP HANA. The solution must meet the following requirements:

- * Network latency between SAP NetWeaver and HANA must be minimized.
- * An SAP production landscape on Azure must be supported.
- * Network performance must be validated regularly.

What should you include in the solution? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Deploy HANA and NetWeaver to:	Microsoft ▼ ☐ An availability set ☐ An availability zone ☐ A proximity placement group
Networking configuration:	▼ ☐ Enable Write Accelerator ☐ Deploy ExpressRoute Direct ☐ Enable Accelerated Networking
Validate network performance by using:	▼ ☐ ABAPMeter ☐ Apache JMeter ☐ Network Performance Monitor

Answer:

Explanation:

Deploy HANA and NetWeaver to:

Networking configuration:

Validate network performance by using:

Explanation

Graphical user interface, text Description automatically generated with medium confidence

Deploy HANA and NetWeaver to:

Networking configuration:

Validate network performance by using:

Box 1: A proximity placement group

Azure offers proximity placement groups. Proximity placement groups can be used to force grouping of different VM types into a single Azure datacenter to optimize the network latency between these different VM types to the best possible. In the process of deploying the first VM into such a proximity placement group, the VM gets bound to a specific datacenter.

Note: SAP applications based on the SAP NetWeaver or SAP S/4HANA architecture are sensitive to network latency between the SAP application tier and the SAP database tier. This sensitivity is the result of most of the business logic running in the application layer. Because the SAP application layer runs the business logic, it issues queries to the database tier at a high frequency, at a rate of thousands or tens of thousands per second. In most cases, the nature of these queries is simple. They can often be run on the database tier in 500 microseconds or less.

Box 2: Enable Accelerated Networking

To further reduce network latency between Azure VMs, we recommend that you choose Azure Accelerated Networking. Use it when you deploy Azure VMs for an SAP workload, especially for the SAP application layer and the SAP DBMS layer.

Box 3: Network Performance Monitor

Network Performance Monitor (NPM) - a cloud-based network monitoring solution for cloud-only, on-premises, and hybrid networking environments.

Network Performance Monitor offers three broad capabilities:

* Performance Monitor: You can monitor network connectivity across cloud deployments and on-premises locations, multiple data centers, and branch offices and mission-critical multitier applications or microservices. With Performance Monitor, you can detect network issues before users complain.

* Service Connectivity Monitor

* ExpressRoute Monitor

Note 2: Azure Monitor for SAP Solutions is an Azure-native monitoring product for anyone running their SAP landscapes on Azure. It works with both SAP on Azure Virtual Machines and SAP on Azure Large Instances.

NEW QUESTION # 219

You have an on-premises SAP environment that uses AIX servers and IBM DB2 as the database platform.

You plan to migrate SAP to Azure. In Azure, the SAP workloads will use Windows Server and Microsoft SQL Server as the database platform.

What should you use to export from DB2 and import the data to SQL Server?

- A. R3trans
- B. SQL Server Management Studio (SSMS)
- C. R3load
- D. Azure SQL Data Warehouse

Answer: B

Explanation:

Explanation/Reference:

Explanation:

To migrate DB2 databases to SQL Server, you must connect to the DB2 database that you want to migrate.

When you connect, SSMA obtains metadata about all DB2 schemas, and then displays it in the DB2 Metadata Explorer pane.

<https://docs.microsoft.com/en-us/biztalk/adapters-and-accelerators/adapters-sap/import-sap-data-using-sql-server-management-studio>

NEW QUESTION # 220

You have an on-premises deployment of SAP Business Suite on HANA that includes a CPU-intensive application tier and a 20-TB database tier.

You plan to migrate to SAP HANA on Azure.

You need to recommend a compute option to host the application and database tiers. The solution must minimize cost.

What should you recommend for each tier? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Application:	▼ Ev3-series of Azure virtual machines HANA on Azure (Large Instances) M-series of Azure virtual machines
Database:	▼ Ev3-series of Azure virtual machines HANA on Azure (Large Instances) M-series of Azure virtual machines

Answer:

Explanation:

Application:	▼ Ev3-series of Azure virtual machines HANA on Azure (Large Instances) M-series of Azure virtual machines
Database:	▼ Ev3-series of Azure virtual machines HANA on Azure (Large Instances) M-series of Azure virtual machines

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machines/workloads/sap/hana-storage-architecture>

<https://azure.microsoft.com/en-us/pricing/details/virtual-machines/series/>

NEW QUESTION # 221

You have an on-premises third-party enterprise resource planning (ERP) system that uses Microsoft SQL Server 2016. You plan to migrate the ERP system to SAP Business Suite on SAP HANA on Azure virtual machines. You need to identify the appropriate sizing for Business Suite on HANA. What should you use?

- A. SAP Quick Sizer for HANA
- B. SAP Cloud Platform Cockpit
- C. SAP Quick Sizer for HANA Cloud

- D. HANA Cockpit

Answer: C

Explanation:

If a customer runs non-SAP systems, the only way of Sizing the required Hardware for SAP HANA is the Quick-Sizer tool.

HANA-based Cloud Quick Sizer: Please use this version, if the product that you want to size shall run in the Cloud; e.g. SAP S/4HANA Cloud and SAP Data Warehouse Cloud.

Reference:

<https://www.sap.com/about/benchmark/sizing.html#quick-sizer>

NEW QUESTION # 222

You are deploying an SAP environment across Azure Availability Zones. The environment has the following components:

ASCS/ERS instances that use a failover cluster

SAP application servers across the Azure Availability Zones

Database high availability by using a native database solution

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
Network latency is a limiting factor when deploying DBMS instances that use synchronous replication across the Azure Availability Zones.	☐	☐
The performance of SAP systems can be validated by using ABAPMeter.	☐	☐
To help identify the best Azure Availability Zones for deploying the SAP components, you can use NIPING to verify network latency between the zones.	☐	☐

Answer:

Explanation:

Statements	Yes	No
Network latency is a limiting factor when deploying DBMS instances that use synchronous replication across the Azure Availability Zones.	☒	☐
The performance of SAP systems can be validated by using ABAPMeter.	☒	☐
To help identify the best Azure Availability Zones for deploying the SAP components, you can use NIPING to verify network latency between the zones.	☒	☐
