The ChromeOS-Administrator Pdf Dumps will teach you the basic technology and tell you how to affectively prepare for the ChromeOS-Administrator real test. In a word, ChromeOS-Administrator updated dumps is the best reference for you preparation.

Google Professional ChromeOS Administrator Exam Sample Questions (Q18-Q23):

NEW QUESTION # 18

How should you use Chrome Remote Desktop from the Google Admin console to connect a user?

- A. Open Chrome Remote Desktop and type the user's username
- B. Open Chrome Remote Desktop and type the device serial number
- **C. Find the device and click remote desktop**
- D. Find the user account and click remote desktop

Answer: C

Explanation:

To remotely access a user's ChromeOS device through the Admin console, you must find the specific device and click on the remote desktop option. This approach ensures that you are connecting to the correct managed device associated with the user.

Verified Answer from Official Source:

The correct answer is verified from the Google Admin Console Remote Access Guide, which details the procedure to initiate a remote session.

"To access a ChromeOS device remotely, navigate to Devices > Chrome > Devices in the Admin console, find the specific device, and click 'Remote Desktop'." This method helps ensure accurate device management and support without needing personal user credentials or serial numbers.

Objectives:

- * Provide remote assistance efficiently.
- * Use the Admin console for remote device management.

NEW QUESTION # 19

Which setting is required to restrict Chrome Remote Desktop use to only accounts on your domain?

- A. Firewall traversal
- B. Chrome Remote Desktop review
- **C. Remote access clients**
- D. URL Blocking

Answer: C

Explanation:

Within the "Chrome Remote Desktop" settings in the Google Admin console, the option "Remote access clients" allows you to restrict access to Chrome Remote Desktop based on the domain of the user accounts. By configuring this setting, you can ensure that only users with accounts on your specific domain can access Chrome Remote Desktop on the managed devices.

Why other options are incorrect:

- * A. Firewall traversal: This setting controls whether Chrome Remote Desktop can bypass firewalls to establish connections, but it does not restrict access based on domain.
- * B. URL Blocking: This setting controls which websites users can access but does not specifically apply to Chrome Remote Desktop access based on domain.
- * D. Chrome Remote Desktop review: This setting allows administrators to review Chrome Remote Desktop sessions but does not restrict access based on domain.

NEW QUESTION # 20

A customer has a mission-critical workload running on ChromeOS and needs devices configured to reduce ChromeOS changes. How can an admin reduce the risk of an unexpected change in an OS update affecting the customer's entire ChromeOS device domain while maintaining security and minimizing admin workload?

- A. Enable variations
- B. Move to a Long-term Support channel
- **C. Add an update rollout plan**
- D. Force auto reboot after update

Answer: C

Explanation:

Update rollout plans in the Google Admin console allow administrators to gradually roll out ChromeOS updates to a subset of devices first. This allows for testing in a controlled environment before deploying to the entire fleet, reducing the risk of unexpected issues impacting all devices.

Steps to add an update rollout plan:

- * Access Google Admin Console: Sign in with your administrator credentials.
- * Navigate to Device Management: Go to Devices > Chrome > Settings > Updates.
- * Create Rollout Plan: Click on "Add an update rollout plan."
- * Select Devices: Choose the specific devices or organizational units (OUs) to include in the initial rollout.
- * Set Timeline: Define the start and end dates for the rollout.
- * Save and Apply: Save the plan and apply it to the selected devices.

NEW QUESTION # 21

You are migrating an organization from Windows devices. Part of the migration process involves setting up the existing suite of business applications for use with ChromeOS, leveraging cloud technologies whenever possible. Which of these would be the preferred option when choosing the type of solution to deploy?

- A. Write a tutorial on how to install each of the applications using the Linux terminal and ask users to follow those instructions when first using their new device.
- **B. Check to see if there's a web application equivalent that provides all the necessary features and, if so, deploy the URL through the Admin console.**
- C. Deploy the legacy client in a virtualization solution and use that to stream the application to the ChromeOS devices.
- D. Go to the Google Play Store and deploy the Android client of the app in question.

Answer: B

Explanation:

The best practice when migrating from Windows to ChromeOS is to utilize web applications whenever possible. Web apps offer seamless integration with ChromeOS, are easy to manage, and do not require local installation or compatibility adjustments.

Verified Answer from Official Source:

The correct answer is verified from the Google ChromeOS Migration Guide, which advises using web-based solutions for cross-platform compatibility and centralized management.

"When migrating from traditional desktop environments, prioritize using web applications that mirror the existing functionality, as they are compatible with ChromeOS and easy to manage." Web applications reduce the need for complex installations and provide access from any ChromeOS device, ensuring a smooth transition during migration.

Objectives:

- * Migrate business applications efficiently to ChromeOS.
- * Leverage cloud technologies for better compatibility.

NEW QUESTION # 22

You need to set a policy that prevents the device from shutting down while idling on the sign-in screen. Where should you navigate to?

- A. Device Settings > Allow shutdown
- B. User Settings > User Experience
- **C. Device Settings > Power management**
- D. User Settings > Idle settings

Answer: C

Explanation:

To prevent a ChromeOS device from shutting down while idling on the sign-in screen, you need to adjust the power management settings. This can be done through the following steps:

- * Go to the Google Admin console.
- * Navigate to Device Management > Chrome Management > Device Settings.
- * Find the Power management section and locate the setting that controls idle behavior on the sign-in screen.
- * Adjust the setting to prevent shutdown during idle periods.

Option A is incorrect because idle settings primarily control screen dimming and sleep behavior.

Option B is incorrect because user experience settings generally focus on visual and interaction aspects, not power management.

Option C is incorrect because there isn't a specific "Allow shutdown" setting in ChromeOS device settings.

NEW QUESTION # 23

.....

The greatest product or service in the world comes from the talents in the organization. Talents have given life to work and have driven companies to move forward.
