

100% Pass Quiz Perfect HPE6-A78 - Latest Aruba Certified Network Security Associate Exam Demo

P.S. Free & New HPE6-A78 dumps are available on Google Drive shared by ExamDumpsVCE: https://drive.google.com/open?id=1TQJnGA2rY860OIb8aTQp9cyo6Z2j_JvG

What are you waiting for? Opportunity knocks but once. You can get HP HPE6-A78 complete as long as you enter ExamDumpsVCE website. You find the best HPE6-A78 Exam Training materials, with our exam questions and answers, you will pass the exam.

The HP HPE6-A78 exam covers a broad range of topics including network security fundamentals, wireless security, and access control. Candidates will be tested on their ability to configure and maintain Aruba network security solutions, as well as their ability to troubleshoot common network security issues. Furthermore, the exam focuses on real-world scenarios to ensure that candidates are prepared to handle the challenges of network security in the workplace.

HP HPE6-A78 Certification Exam is designed to test the knowledge and skills of network professionals in the area of Aruba network security. HPE6-A78 exam validates the candidates' ability to implement and manage secure network solutions using Aruba technology. Aruba Certified Network Security Associate Exam certification is ideal for network security professionals who are looking to advance their careers and demonstrate their expertise in Aruba network security.

HP HPE6-A78 Latest Cram Materials - HPE6-A78 Braindumps Pdf

In order to cater to different kinds of needs of customers, three versions for HPE6-A78 learning materials are available. You can choose one you prefer according to your own needs. HPE6-A78 PDF version is printable and you can study anywhere and anyplace. HPE6-A78 Soft test engine supports MS operating system and have two modes for practice. In addition, HPE6-A78 Soft test engine can simulate the real exam environment, and your confidence for the exam can be strengthened through this version. HPE6-A78 Online test engine is convenient and easy to study, it supports all web browsers, and it has testing history and performance review, so that you can have a general review before next training.

HP Aruba Certified Network Security Associate Exam Sample Questions (Q84-Q89):

NEW QUESTION # 84

Which attack is an example of social engineering?

- A. An attack exploits an operating system vulnerability and locks out users until they pay the ransom.

- B. A hacker eavesdrops on insecure communications, such as Remote Desktop Program (RDP), and discovers login credentials.
- C. A user visits a website and downloads a file that contains a worm, which self-replicates throughout the network.
- D. An email is used to impersonate a bank and trick users into entering their bank login information on a fake website page.

Answer: D

Explanation:

An example of a social engineering attack is described in option A, where an email is used to impersonate a bank and deceive users into entering their bank login information on a counterfeit website. Social engineering attacks exploit human psychology rather than technical hacking techniques to gain access to systems, data, or personal information. These attacks often involve tricking people into breaking normal security procedures. The other options describe different types of technical attacks that do not primarily rely on manipulating individuals through deceptive personal interactions.

NEW QUESTION # 85

Refer to the exhibit, which shows the settings on the company's MCs.

- Mobility Controller

Dashboard General Admin AirWave CPsec Certificates

Configuration

WLANs Control Plane Security

Roles & Policies Enable CP Sec

Access Points Enable auto cert provisioning:

You have deployed about 100 new Aruba 335-APs. What is required for the APs to become managed?

- A. approving the APs as authorized APs on the AP whitelist
- B. configuring a PAPI key that matches on the APs and MCs
- C. installing self-signed certificates on the APs
- D. installing CA-signed certificates on the APs

Answer: A

Explanation:

Based on the exhibit, which shows the settings on the company's Mobility Controllers (MCs), with 'Control Plane Security' enabled and 'Enable auto cert provisioning' available, new Aruba 335-APs require approval on the MC to become managed. This is commonly done by adding the APs to an authorized AP whitelist, after which they can be automatically provisioned with certificates generated by the MC.

NEW QUESTION # 86

You have a network with ArubaOS-Switches for which Aruba ClearPass Policy Manager (CPPM) is acting as a TACACS+ server to authenticate managers. CPPM assigns the admins a TACACS+ privilege level, either manager or operator. You are now adding ArubaOS-CX switches to the network. ClearPass admins want to use the same CPPM service and policies to authenticate managers on the new switches.

What should you explain?

- A. This approach will work, but will need to be adjusted later if you want to assign managers to the default auditors group.
- B. This approach cannot work because the ArubaOS-CX switches do not support TACACS+.
- C. This approach cannot work because the ArubaOS-CX switches do not accept standard TACACS+ privilege levels.
- D. This approach will work to assign admins to the default "administrators" group, but not to the default "operators" group.

Answer: D

Explanation:

With ArubaOS-CX switches, the use of ClearPass Policy Manager (CPPM) as a TACACS+ server for authentication is supported. The privilege levels assigned by CPPM will translate onto the switches, where the "manager" privilege level typically maps to administrative capabilities and the "operator" privilege level maps to more limited capabilities. ArubaOS-CX does support standard TACACS+ privilege levels, so administrators can be assigned appropriately. If the ClearPass policies are correctly configured, they will work for both ArubaOS-Switches and ArubaOS-CX switches. The distinction between the "administrators" and "operators" groups is inherent in the ArubaOS-CX role-based access control, and these default groups need to be appropriately mapped to the TACACS+ privilege levels assigned by CPPM.

NEW QUESTION # 87

A company has an ArubaOS controller-based solution with a WPA3-Enterprise WLAN, which authenticates wireless clients to Aruba ClearPass Policy Manager (CPPM). The company has decided to use digital certificates for authentication. A user's Windows domain computer has had certificates installed on it. However, the Networks and Connections window shows that authentication has failed for the user. The Mobility Controllers (MC's) RADIUS events show that it is receiving Access-Rejects for the authentication attempt.

What is one place that you can look for deeper insight into why this authentication attempt is failing?

- A. the packets captured on the MC control plane destined to UDP 1812
- **B. the RADIUS events within the CPPM Event Viewer**
- C. the reports generated by Aruba ClearPass Insight
- D. the Alerts tab in the authentication record in CPPM Access Tracker

Answer: B

Explanation:

When an authentication attempt for a user's Windows domain computer is failing on a WPA3-Enterprise WLAN and the Mobility Controller is receiving Access-Rejects, one place to look for deeper insight is the RADIUS events within the CPPM Event Viewer. ClearPass Policy Manager (CPPM) logs all RADIUS authentication events, and the Event Viewer would show detailed information about why a particular authentication attempt was rejected. This could include reasons such as incorrect credentials, expired certificates, or policy mismatches. The CPPM Event Viewer is an essential troubleshooting tool within ClearPass to diagnose authentication issues, as indicated in the ClearPass Policy Manager documentation.

NEW QUESTION # 88

What is symmetric encryption?

- A. It uses a Key that is double the size of the message which it encrypts.
- **B. It uses the same key to encrypt plaintext as to decrypt ciphertext.**
- C. It is any form of encryption that ensures that the ciphertext is the same length as the plaintext.
- D. It simultaneously creates ciphertext and a same-size MAC.

Answer: B

Explanation:

Symmetric encryption is a type of encryption where the same key is used to encrypt and decrypt the message. It's called "symmetric" because the key used for encryption is identical to the key used for decryption. The data, or plaintext, is transformed into ciphertext during encryption, and then the same key is used to revert the ciphertext back to plaintext during decryption. It is a straightforward method but requires secure handling and exchange of the encryption key.

:

Basic principles of cryptography.

NEW QUESTION # 89

.....

If you do all things with efficiency, you will have a promotion easily. If you want to spend less time on preparing for your HPE6-A78 exam, if you want to pass your exam and get the certification in a short time, our HPE6-A78 Study Materials will be your best choice to help you achieve your dream. Only studying with our HPE6-A78 learning engine for 20 to 30 hours, we can claim that you

can pass you exam without difficulty.
