Test C-SAC-2501 Practice, C-SAC-2501 Valid Test Answers

Customizable practice tests comprehensively and accurately represent the actual Professional SAP C-SAC-2501 Certification Exam pattern. Many students have studied from product and passed the SAP Certified Associate - Data Analyst - SAP Analytics Cloud (C-SAC-2501) test with ease. Our customers can receive questions updates for up to 1 year after purchasing the product. These free updates of questions will help them to prepare according to the latest syllabus.

SAP Certified Associate - Data Analyst - SAP Analytics Cloud Sample Questions (Q54-Q59):

NEW QUESTION # 54

What can you use to organize dimensions into logical categories in a live model?

- A. Groups
- B. Parent-child hierarchy
- C. Value driver tree
- D. Level-based hierarchy

Answer: B

Explanation:

In a live model within SAP Analytics Cloud, dimensions can be organized into logical categories using either level-based hierarchies or parent-child hierarchies. Level-based hierarchies are used when the relationships between items are defined by distinct levels, such as Geography might be divided into Country, State, and City levels. Parent-child hierarchies, on the other hand, are useful when the data's hierarchy is not strictly defined by levels but by a parent relationship where a child member is associated with a parent member, which is common in organizational structures or product categories.

NEW QUESTION # 55

You want to total several income and expense accounts using the account type property. What configuration option in the advanced formula must you use?

- A. Unbooked
- B. Append
- C. Aggregate To
- D. Signflip

Answer: D

NEW QUESTION # 56

You import data into a dataset. One of the columns imported is Year, and SAP Analytics Cloud interprets it as a measure. How can you ensure that it is treated as a calendar year?

- A. Includes the Year measure in a level-based time hierarchy in the dataset.
- B. Insert a character into the Year measure using the transform bar.
- C. Add the month as a suffix to the Year measure.
- D. Change the Year measure to a dimension in the dataset.

Answer: D

Explanation:

If SAP Analytics Cloud interprets a 'Year' column as a measure instead of a dimension, it should be changed to a dimension to ensure it is treated as a calendar year. This adjustment can be made within the model or dataset settings, where the column's role can be switched from a measure (quantitative value) to a dimension (qualitative value). Treating 'Year' as a dimension allows it to be used appropriately in time-based analyses, such as trends over time, without being aggregated like a numerical measure.

NEW QUESTION # 57

You want to save your data analyzer result. What is it saved as?

- A. Insight
- B. Dataset
- C. Model
- D. Story

Answer: A

NEW QUESTION # 58

What must a data model contain in SAP Analytics Cloud? Note: There are 2 correct answers to this question.

- A. Measures
- B. Dimensions
- C. Calculations
- D. Hierarchies

Answer: A,B

Explanation:

In SAP Analytics Cloud, a data model must contain at least "Dimensions" and "Measures" to be functional. Dimensions are the qualitative aspects of the data (e.g., time, geography, product categories) that provide the context for analysis. Measures, on the other hand, are the quantitative data points (e.g., sales, costs, quantities) that are analyzed within the context provided by dimensions. Both are fundamental components of a data model, enabling structured data analysis and reporting.
