Reliable 156-582 Practice Materials & 156-582 Latest Real Exam

As for the points you may elapse or being frequently tested in the real exam, we give referent information, then involved them into

our 156-582 practice materials. Their expertise about 156-582 practice materials is unquestionable considering their long-time research and compile. Furnishing exam candidates with highly effective materials, you can even get the desirable outcomes within one week. By concluding quintessential points into 156-582 practice materials, you can pass the exam with the least time while huge progress.

CheckPoint Check Point Certified Troubleshooting Administrator - R81.20 Sample Questions (Q67-Q72):

NEW QUESTION # 67

Customer wants to use autonomous threat prevention. How do you enable it?

- A. Enable Autonomous Threat Prevention on the Security Gateway from the SmartConsole: Gateway and Servers view, the default profile Strict Security will be selected.
- B. Enable Autonomous Threat Prevention on the Security Gateway from the SmartConsole: Gateway and Servers view and enable IPS on the Security Gateway by the command: ips on.
- C. Enable Autonomous Threat Prevention on the Security Gateway from the SmartConsole: Gateway and Servers view, then select inspection profile.
- D. Enable Autonomous Threat Prevention on the Security Gateway from the SmartConsole: Gateway and Servers view, inspection profile is not needed, the Security Gateway will automatically select the best profile according to deployment.

Answer: C

Explanation:

To enable Autonomous Threat Prevention on a Security Gateway, navigate to the Gateway and Servers view in SmartConsole, enable the feature, and then select an appropriate inspection profile. Selecting the inspection profile allows administrators to define the level of threat prevention and customize the security measures based on the organization's specific needs and deployment scenarios.

NEW QUESTION # 68

Which of the following would be the most appropriate command in debugging a HideNAT issue?

- A. fw ctl zdebug + fw xalloc hidenat
- B. fw ctl zdebug + xlate xltrc nat
- C. fw ctl zdebug + fw n allnat
- D. fw ctl zdebug + dynamic natips natports

Answer: B

Explanation:

For debugging Hide NAT issues, the fw ctl zdebug + xlate xltrc nat command is the most appropriate. This command provides detailed tracing of NAT translations, including those related to Hide NAT configurations.

It allows administrators to monitor how internal IP addresses are being translated to external addresses, facilitating effective troubleshooting.

NEW QUESTION # 69

How would you check the connection status of a gateway to the Log server?

- A. Run netstat -anp | grep :18187 in CLISH on Log server
- B. Run netstat -anp | grep :257 in expert mode on Log server
- C. Run netstat -anp | grep :18187 in expert mode on Log server
- D. Run netstat -anp | grep :257 in CLISH on Log server

Answer: B

Explanation:

To check the connection status between a gateway and the Log server, use the netstat -anp | grep :257 command in expert mode on the Log server. This command filters the network connections to display only those related to port 257, which is used for log collection. Running it in expert mode provides the necessary privileges to view detailed network information.

NEW QUESTION # 70

You tested the connection from source to destination and you are not able to find logs in your Security Management. What is the best possible reason?

- A. The FWM process crashed on Security Management, therefore logging will not work.
- B. There is not enough storage in Security Management, so the logs can't be stored.
- C. The gateway is logging locally.
- **D. The logging blade was not enabled on Security Gateway.**

Answer: D

Explanation:

If logs are not appearing in the Security Management despite successful traffic flow, the most likely reason is that the logging blade is not enabled on the Security Gateway. Without enabling the logging functionality, the gateway will not send logs to the Security Management Server, even though the traffic itself is passing through successfully.

NEW QUESTION # 71

When managing the disk space for locally stored logs, the Delete threshold for the gateway cannot be more than what percentage of the total disk space?

- A. 50%
- **B. 75%**
- C. 10%
- D. 25%

Answer: B

Explanation:

The Delete threshold for managing locally stored logs on a Security Gateway should not exceed 75% of the total disk space. This threshold ensures that there is ample space for new logs while preventing the disk from becoming overly full, which could lead to system instability or loss of logging capabilities.

NEW QUESTION # 72

.....

Looking for customizable Check Point Certified Troubleshooting Administrator - R81.20 (156-582) practice exams? Look no further than TrainingDump! Our desktop and web-based practice exams allow candidates to set their own schedule and choose which CheckPoint 156-582 questions to include in the exam.
