- A. Dynamic
- B. System
- C. Non System
- D. Static

Answer: B,C

Explanation:

There are two types of session variables:

System session variables have reserved names that cannot be used for other kinds of variables (such as static or dynamic repository variables and non-system session variables).

Non-system - A system variable that the administrator creates and names. For example, the administrator might create a SalesRegion non-system variable that initializes the name of a user's sales region.
