

# 100% Pass-Rate 400-007 Exam Lab Questions Spend Your Little Time and Energy to Pass 400-007 exam one time

**Leads4Pass** <https://www.leads4pass.com/400-007.html>  
2024 Latest leads4pass 400-007 PDF and VCE dumps Download

## QUESTION 1

Which two actions must be taken when assessing an existing wireless network implementation for its readiness to support voice traffic? (Choose two.)

- A. Check for high channel utilization.
- B. Check for high roaming delay
- C. Check for latency over wireless
- D. Check for uniform radio coverage across the floors.
- E. Identify frequent TX power changes

Correct Answer: AB

- A) It can cause jitter
- B) It can cause line drop
- C) Should not be high latency within same network. Little latency still can talk but slower.
- D) No reason to get voice coverage if no wifi data coverage. That's another requirement for greater coverage.
- E) Seldom to care it.

## QUESTION 2

You are tasked with the design of a high available network. Which two features provide fail closed environments? (Choose two.)

- A. EIGRP
- B. RPVST+
- C. MST
- D. L2MP

Correct Answer: AB

## QUESTION 3

Company XYZ is revisiting the security design for their data center because they now have a requirement to control traffic within a subnet and implement deep packet inspection. Which technology meets the updated requirements and can be incorporated into the design?

- A. routed firewall
- B. VLAN ACLs on the switch

P.S. Free & New 400-007 dumps are available on Google Drive shared by PrepAwayETE: <https://drive.google.com/open?id=1F2x9WZx0oMEInkF72lfva9X5y8hhqTD->

In order to meet the demand of all customers and protect your machines network security, our company can promise that our 400-007 test training guide have adopted technological and other necessary measures to ensure the security of personal information they collect, and prevent information leaks, damage or loss. In addition, the 400-007 exam dumps system from our company can help all customers ward off network intrusion and attacks prevent information leakage, protect user machines network security. If you choose our 400-007 study questions as your study tool, we can promise that we will try our best to enhance the safety guarantees and keep your information from revealing, and your privacy will be protected well. You can rest assured to buy the 400-007 exam dumps from our company.

Many don't find real Cisco Certified Design Expert (CCDE v3.0) Written Exam exam questions and face loss of money and time. PrepAwayETE made an absolute gem of study material which carries actual Cisco Certified Design Expert (CCDE v3.0) Written Exam (400-007) Exam Questions for the students so that they don't get confused in order to prepare for Cisco Certified Design Expert (CCDE v3.0) Written Exam (400-007) exam and pass it with a good score. The 400-007 practice test questions are made by examination after consulting with a lot of professionals and receiving positive feedback from them.

## 400-007 Valid Test Fee - Latest 400-007 Test Questions

Cisco 400-007 practice exam support team cooperates with users to tie up any issues with the correct equipment. If Cisco Certified Design Expert (CCDE v3.0) Written Exam material changes, CertsFire also issues updates free of charge for three months following the purchase of our Cisco 400-007 Exam Questions.

Cisco 400-007 Certification Exam is designed for those network professionals who want to enhance their skills and knowledge in network

design. 400-007 exam is a part of the CCDE (Cisco Certified Design Expert) certification, which is one of the most prestigious certifications in the networking industry. The CCDE certification is intended for senior-level network architects and designers who are responsible for designing complex networks for large organizations.

## Cisco Certified Design Expert (CCDE v3.0) Written Exam Sample Questions (Q53-Q58):

### NEW QUESTION # 53

Which service abstracts away the management of the operating system, middleware, and runtime?

- A. BMaaS
- B. SaaS
- C. IaaS
- D. PaaS

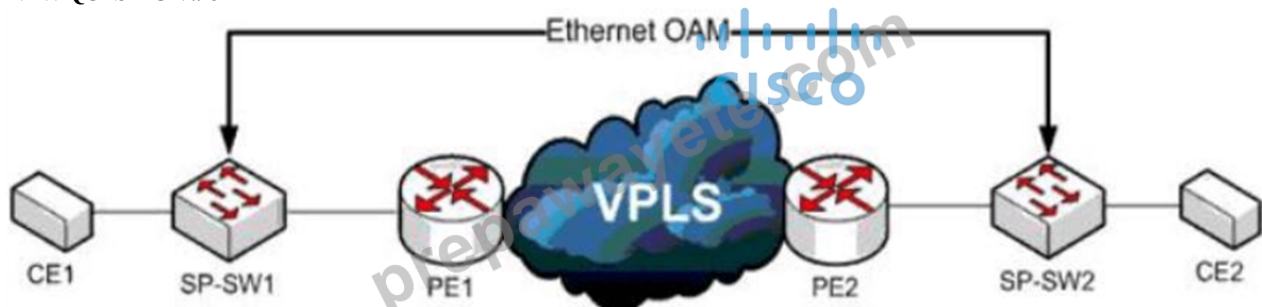

**Answer: D**

Explanation:

IaaS, PaaS, and SaaS each offer a progressive layer of abstraction after that. IaaS abstracts away the physical compute, network, storage, and the technology needed to virtualize those resources. PaaS goes a step further and abstracts away the management of the operating system, middleware, and runtime.

<https://www.ibm.com/topics/iaas#:~:text=IaaS%20abstracts%20away%20the%20physical,system%2C%20middleware%2C%20and%20runtime.>

### NEW QUESTION # 54

Refer to the exhibit. A service provider has a requirement to use Ethernet OAM to detect end-to-end connectivity failures between SP-SW1 and SP-SW2. Which two ways to design this solution are true?

(Choose two)

- A. Enable unicast heartbeat messages to be periodically exchanged between MEPs
- B. Enable Connectivity Fault Management on the SP switches
- C. Forward E-LMI PDUs over VPLS
- D. Use upward maintenance endpoints on the SP switches
- E. Forward LLDP PDUs over the VPLS

**Answer: A,B**

Explanation:

In service provider Ethernet transport environments such as VPLS, Ethernet OAM (Operations, Administration, and Maintenance) is used to provide fault detection, monitoring, and troubleshooting capabilities. The two relevant components here are:

\* A (Unicast heartbeat messages between MEPs): Maintenance End Points (MEPs) are configured at the edges of the OAM domain (SP-SW1 and SP-SW2). Heartbeat messages can be used to proactively monitor and detect loss of continuity between the endpoints.

\* B (Enable Connectivity Fault Management): CFM (IEEE 802.1ag) provides end-to-end fault detection, continuity check messages (CCMs), loopback, and link trace mechanisms that operate between MEPs at Layer 2. CFM enables proactive detection of failures and service-level assurance across the provider's Ethernet segment.

Other options explained:

\* C: Upward MEPs are not applicable here since these are typically used for customer-facing or hierarchical maintenance domains.

\* D: E-LMI (Ethernet Local Management Interface) operates between CE and PE for service activation- not applicable for SP-SW to SP-SW fault detection across VPLS.

\* E: LLDP (Link Layer Discovery Protocol) is for neighbor discovery on directly connected interfaces- not suitable for end-to-end fault detection across a VPLS domain.

This design solution aligns fully with CCDE v3.1 principles for service provider Layer 2 VPN design and Ethernet OAM integration.

### NEW QUESTION # 55

A network attacker exploits application flaws to compromise critical systems in the organization with these objectives:

\* Obtain sensitive data and export the data out of the network.

\* Compromise developer and administrator credentials to potentially

What is the next step after application discovery is completed in Zero Trust networkings

- A. Enforce policies and microsegmentation.
- **B. Establish visibility and behavior modeling**
- C. Ensure trustworthiness of systems.
- D. Assess real-time security health.

**Answer: B**

Explanation:

<https://www.cisco.com/c/en/us/solutions/collateral/enterprise/design-zone-security/zt-arch-guide.html>

#### NEW QUESTION # 56

Company XYZ wants to redesign the Layer 2 part of their network and wants to use all available uplinks for increased performance. They also want to have end host reachability supporting conversational learning. However, due to design constraints, they cannot implement port-channel on the uplinks. Which other technique can be used to make sure the uplinks are in active/active state?

- A. TRILL
- **B. LISP**
- C. MSTP
- D. switch stack

**Answer: B**

#### NEW QUESTION # 57

Company XYZ is designing the IS-IS deployment strategy for their multiarea IS-IS domain. They want IS-IS neighbor relationships minimized on each segment and the LSDB size optimized. Which design can be used?

- A. Design all routers as Level 2 routers. Set the links between the routers as Level 1 with the area
- B. Design the network so that the routers connecting to other areas are Level 2 routers and internal routers are Level 1
- **C. Design the network so that the routers connecting to other areas are Level 1/Level 2 routers and internal routers are Level 1**
- D. Design the network so that all routers are Level 1 routers

**Answer: C**

Explanation:

\* D (L1/L2 for ABRs and L1 for internal routers): This hierarchical approach minimizes LSDB size inside areas (L1 routers only maintain intra-area routes) while L1/L2 routers handle inter-area route propagation, reducing neighbor adjacencies and improving scalability.

Other options explained:

\* A: Level 2 everywhere results in larger LSDBs across all routers.

\* B: Only L2 routers at ABRs would isolate L1 domains improperly.

\* C: Pure L1 design prevents inter-area reachability.

#### NEW QUESTION # 58

.....

The 400-007 test materials are mainly through three learning modes, Pdf, Online and software respectively. The 400-007 test materials have a biggest advantage that is different from some online learning platform which has using terminal number limitation, the 400-007 quiz torrent can meet the client to log in to learn more, at the same time, the user can be conducted on multiple computers online learning, greatly reducing the time, and people can use the machine online of 400-007 Test Prep more conveniently at the same time.
