EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q33-Q38):

NEW QUESTION # 33

Question:

What type of disk devices are the highest performing and most expensive of all disk devices?

- A. FC
- B. SATA
- C. SCM
- D. SAS
- E. SSD

Answer: C

Explanation:

Storage Class Memory (SCM) represents a new class of storage technology that bridges the gap between traditional DRAM and NAND flash memory. SCM offers significantly lower latency and higher endurance compared to NAND flash, making it the highest-performing storage medium currently available. Due to its advanced technology and performance characteristics, SCM is also the most expensive among the listed options.

* FC (Fibre Channel): A network protocol used for high-speed data transfer, not a type of disk device.

* SATA (Serial ATA): Commonly used in consumer-grade storage; offers lower performance and cost.

* SAS (Serial Attached SCSI): Offers better performance than SATA but still lags behind SSDs and SCM.

* SSD (Solid State Drive): Provides faster data access than HDDs but is outperformed by SCM.

* SCM (Storage Class Memory): Combines the speed of DRAM with the persistence of NAND, offering unparalleled performance.

NEW QUESTION # 34

Question:

(Refer to exhibit diagram)

The diagram shows a SAN zoning configuration with three zones: Zone 1 (Mixed), Zone 2 (WWN), and Zone 3 (Port). Which zoning type is used in Zone 2?

- A. Mixed zoning
- B. WWN zoning
- C. Port zoning
- D. No zoning

Answer: B

Explanation:

WWN zoning uses the World Wide Names (unique identifiers) of devices (HBAs and targets) to define zone membership.

Offers flexibility: devices can be moved to different ports without reconfiguring zoning.

Common in modern SAN environments.

* Port zoning uses physical port numbers for zone membership.

* Mixed zoning combines port and WWN methods.

* No zoning would not segment traffic.

NEW QUESTION # 35

Question:

Which statement defines the limitation of Native NVMe?

- A. It requires 10 Gigabit or greater Ethernet LANs with TCP.
- B. It requires a 32 Gb/s Fibre Channel to work.

- C. It can only deliver high shared storage performance through Fibre Channel.
- **D. It cannot connect to NVM storage devices outside of the server.**

Answer: D

Explanation:

Native NVMe is a protocol designed for direct-attached storage (DAS) environments. It allows a host to communicate with NVM storage devices (like NVMe SSDs) within the same server.

Limitation: Native NVMe does not support external NVMe storage connectivity beyond the server.

To connect to external shared NVMe storage, protocols like NVMe over Fabrics (NVMe-oF) are used.

NEW QUESTION # 36

Question:

An organization wants to consume compute, network, and storage resources through a self-service portal.

Which cloud service model provides this capability?

- A. Software as a Service
- B. Data as a Service
- C. Platform as a Service
- **D. Infrastructure as a Service**

Answer: D

Explanation:

Infrastructure as a Service (IaaS) is a cloud computing model that provides virtualized computing resources over the internet. It offers fundamental infrastructure services such as compute, storage, and networking, which users can provision and manage through a self-service portal. This model allows organizations to scale resources as needed and pay only for what they use.

NEW QUESTION # 37

Question:

A company wants to perform a full backup of its critical data. What is the main advantage of this approach?

- A. It is the fastest backup method.
- **B. It provides the fastest data recovery.**
- C. It requires minimal storage space.
- D. It minimizes the impact on production systems.

Answer: B

Explanation:

A full backup captures all data each time it runs.

* Main advantage: Fastest recovery because no additional backup sets (like incrementals or differentials) need to be combined.

* Disadvantage: Takes more backup time and requires more storage space compared to incremental backups.

* Option B: Full backups have a higher impact because of the time and bandwidth required.

* Option C: Full backups consume the most storage.

* Option D: Full backups are not the fastest in terms of backup window - they are the fastest in recovery.
