100% Pass-Rate Valid Exam Chrome-Enterprise-Administrator Practice - Win Your Google Certificate with Top Score
If you are still hesitating about whether you can get Chrome-Enterprise-Administrator certification through the exam, we believed that our Chrome-Enterprise-Administrator study materials will be your best choice, it will tell you that passing the exam is no longer a dream for you, and it will be your best assistant on the way to passing the exam. Tens of thousands of our customers have benefited from our Chrome-Enterprise-Administrator Exam Braindumps and got their certifications. So you will as long as you choose to buy our Chrome-Enterprise-Administrator practice guide.

Google Chrome-Enterprise-Administrator Exam Syllabus Topics:

Topic	Details
Topic 1	• Analyze Chrome Data: This section of the exam measures skills of a Chrome Data Analyst and focuses on using the Google Admin console to view, analyze, and troubleshoot browser data. It includes reviewing reports, diagnosing browser or update issues, investigating performance problems, and identifying security risks based on log events and Chrome activity.
Topic 2	• Chrome Updates: This section of the exam measures skills of a Chrome IT Policy Analyst and addresses the various update methods available for Chrome. It includes selecting the right update strategy for different business and security needs, managing compliance across platforms, and adapting update methods based on environmental changes or risks.
Topic 3	• Chrome Enterprise Management Fundamentals: This section of the exam measures skills of a Chrome Device Administrator and covers the foundational elements of managing Chrome in an enterprise. It includes understanding how policies are applied and resolved, differentiating managed browsers from profiles, and describing how policies work. It also covers Chrome's built-in security features, how extensions are used and deployed, and how the release cycle and channels are managed.
Topic 4	• Chrome Extensions: This section of the exam measures skills of an Endpoint Security Manager and involves managing Chrome extension policies. It includes designing extension management strategies, handling extension exemptions, creating approval workflows, and assessing extensions for their risk and compliance with business continuity requirements.
Topic 5	• Manage Chrome Enterprise in the Cloud: This section of the exam measures skills of a Cloud Systems Administrator and focuses on preparing and configuring environments for Chrome cloud management. Candidates must demonstrate how to verify domains, use admin roles, configure organizational structures, deploy enrollment tokens, enable reporting, and maintain Chrome using the Google Admin console.

The Chrome-Enterprise-Administrator Practice Exam software is specially made for the students so they can feel real-based examination scenarios and feel some pressure on their brains and don't feel excessive issues while giving the final Google exam. There are a lot of customers that are currently using Itcerttest and are satisfied with it. Itcerttest has designed this product after getting positive feedback from professionals and is rated one of the best study materials for the preparation of the Google Chrome-Enterprise-Administrator Exam.

Google Professional Chrome Enterprise Administrator Certification Exam Sample Questions (Q27-Q32):

NEW QUESTION # 27
A company is reviewing the permissions of extensions that are popular among employees The security team wants to make sure all extensions in the environment have these capabilities disabled:
* Modify to internal home page: `internal.acme.com`
* Access to the storage
* Access to history
Which actions should be taken in the company default extension Permissions and URLs fields to meet the security team's requirements?

- A. Add `internal.acme.com` to runtime blocked hosts; Disable storage permission; Disable history permission
- B. Add `internal.acme.com` to runtime blocked hosts; Enable storage permission; Enable history permission
- C. Add `*.acme.com` to runtime blocked hosts; Enable storage permission; Enable history permission
- D. Add `*.acme.com` to runtime blocked hosts; Disable storage permission; Disable history permission

Answer: D

Explanation:
To prevent extensions from modifying the internal homepage, the administrator should add `*.acme.com` to the "Runtime blocked hosts" list. The wildcard `*` ensures that any attempt to access or modify this domain by an extension will be blocked at runtime. Additionally, to disable access to storage and history, the administrator needs to explicitly disable the "Storage" and "History" permissions within the extension management settings. Therefore, the correct combination is to block the host and disable the permissions.

NEW QUESTION # 28
An organization has a compatibility issue with an internal website after the latest Chrome update The decision is made to revert any updates to the working version and stop Chrome from updating beyond the working version For security, Chrome needs to continue updating older versions to the latest compatible version Which configuration would an administrator set?

- A. Auto update check period
- B. Target version and rollback
- C. Update to extended stable channel
- D. Google Updater policy precedence

Answer: B

Explanation:
To pin Chrome to a specific working version and prevent upgrades beyond it while still allowing updates within that major version for security patches, the "Target version and rollback" policy is the appropriate choice. This allows administrators to specify a target version and potentially roll back if issues arise, while still receiving critical security updates within that targeted version.

NEW QUESTION # 29
An administrator decides to shorten the default time that a browser may be inactive before automatic deletion from the Google

Admin console What policy must be selected for the Device Token Management policy to allow devices to re-enroll in the Google Admin console?

- A. Invalidate Token
- B. Revoke Token
- C. Delete Token
- D. Renew Token

Answer: D

Explanation:
When managing inactive device tokens, the "Renew Token" option is crucial for allowing devices to re-enroll after a period of inactivity. If the token is revoked, invalidated, or deleted, the device will likely require a manual re-enrollment process. Renewing the token provides a mechanism for the device to check back in and remain managed.

NEW QUESTION # 30

A company is managing browsers in the Google Admin console Security has scanned extensions in the organization and has determined that there are several extensions installed with ability to set proxy This violates company policy How would an administrator block these extensions'?

- A. Set policy in the Google Admin console to block all extensions from being installed on the browser
- B. Send an email to the users notifying them that they must uninstall the detected extensions
- C. Set permission policy in the Google Admin console to block such extensions
- D. Remotely connect to each device and delete the extension from the browser

Answer: C

Explanation:
The Google Admin console allows administrators to control extension permissions. By configuring the
"Permissions and URL access" policy, the administrator can block extensions that request specific permissions, such as the ability to set a proxy. This is a centralized and effective way to enforce the security policy. Remotely connecting to each device (option B) is not scalable. Blocking all extensions (option C) might be too restrictive. Relying on users to uninstall (option D) is not enforceable.

NEW QUESTION # 31

A user reports having frequent issues accessing corporate pages and logging into corporate applications After looking into user reports, it is determined that other users have reported similar issues over the past few months While the broader investigation is launched to identify and resolve the root cause, which Google Admin remote actions for managed Chrome browsers can be used to help alleviate such issues for the user?

- A. Clear Cookies; Restart Browser; Logout User
- B. Clear Cache; Clear Cookies; Clear Cache and Cookies
- C. Clear Cache; Delete Temporary Files; Delete Swap File
- D. Clear Cache and Cookies; Delete Temporary Files; Restart User Session

Answer: B

Explanation:
Clearing the browser's cache and cookies is a common first-line troubleshooting step for issues related to website access and login problems. Outdated or corrupted cached data and cookies can often interfere with website functionality and authentication processes. The Google Admin console provides remote actions to
"Clear Cache," "Clear Cookies," or both. Options B, C, and D include actions that are either more disruptive (restart browser, logout user, restart user session) or not standard remote actions available for managed Chrome browsers through the Admin console (delete temporary files, delete swap file).
