As for the safe environment and effective product, why don't you have a try for our SPLK-1004 Test Question, never let you down! Before your purchase, there is a free demo for you. You can know the quality of our SPLK-1004 guide question earlier.

Splunk Core Certified Advanced Power User Sample Questions (Q18-Q23):

NEW QUESTION # 18

What default Splunk role can use the Log Event alert action?

- A. Admin
- B. can_delete
- C. Power
- D. User

Answer: A

Explanation:

In Splunk, the Admin role (Option D) has the capability to use the Log Event alert action among many other administrative privileges. The Log Event alert action allows Splunk to create an event in an index based on the triggering of an alert, providing a way to log and track alert occurrences over time. The Admin role typically encompasses a wide range of permissions, including the ability to configure and manage alert actions.

NEW QUESTION # 19

Which syntax is used when referencing multiple CSS files in a view?

- A. <dashboard stylesheet="custom.css | userapps.css">
- B. <dashboard style="custom.css, userapps.css">
- C. <dashboard stylesheet="custom.css, userapps.css">
- D. <dashboard stylesheet=custom.css stylesheet=userapps.css>

Answer: C

Explanation:

To reference multiple CSS files in a Splunk dashboard, you use the stylesheet attribute with a comma-separated list of file names enclosed in quotes. The correct syntax is:

xml

Copy

1

```
<dashboard stylesheet="custom.css, userapps.css">
```

Here's why this works:

- * stylesheet Attribute : The stylesheet attribute allows you to specify one or more CSS files to style your dashboard.
- * Comma-Separated List : Multiple CSS files are referenced by listing their names separated by commas within a single stylesheet attribute.
- * Quotes : The entire list of CSS files must be enclosed in quotes to ensure proper parsing.

Other options explained:

- * Option A : Incorrect because the pipe (|) character is not valid for separating CSS file names.
- * Option B : Incorrect because the style attribute is not used for referencing CSS files in Splunk dashboards.
- * Option C : Incorrect because the stylesheet attribute cannot be repeated; instead, all CSS files must be listed in a single stylesheet attribute.

Example:

```
<dashboard stylesheet="custom.css, userapps.css">
```

```

<label>Styled Dashboard</label>
<row>
<panel>
<title>Panel Title</title>
<table>
<search>
<query>index=_internal | head 10</query>
</search>
</table>
</panel>
</row>
</dashboard>

```

NEW QUESTION # 20

Which command processes a template for a set of related fields?

- A. **foreach**
- B. xyseries
- C. untable
- D. bin

Answer: A

Explanation:

The foreach command applies a processing step to each field in a set of related fields. It allows repetitive operations to be applied to multiple fields in one go, streamlining tasks across several fields.

The foreach command in Splunk is used to process a template for a set of related fields. It allows you to iterate over multiple fields that share a common naming pattern and apply a transformation or operation to each of them. This is particularly useful when you have a series of similarly named fields (e.g., field1, field2, field3) and want to perform the same action on all of them without specifying each field individually.

For example, if you have fields like price1, price2, and price3, and you want to convert their values to integers, you can use the following syntax:

References:

- * Splunk Documentation on foreach:<https://docs.splunk.com/Documentation/Splunk/latest/SearchReference/foreach>

NEW QUESTION # 21

When running a search, which Splunk component retrieves the individual results?

- A. Indexer
- B. **Search head**
- C. Master node
- D. Universal forwarder

Answer: B

Explanation:

The Search head (Option B) in Splunk architecture is responsible for initiating and coordinating search activities across a distributed environment. When a search is run, the search head parses the search query, distributes the search tasks to the appropriate indexers (which hold the actual data), and then consolidates the results retrieved by the indexers. The search head is the component that interacts with the user, presenting the final search results.

NEW QUESTION # 22

What is a performance improvement technique unique to dashboards?

- A. Using datamodel acceleration
- **B. Using report acceleration**
- C. Using stats instead of transaction
- D. Using global searches

Answer: B

Explanation:

Using report acceleration (Option C) is a performance improvement technique unique to dashboards in Splunk.

Report acceleration involves pre-computing the results of a report (which can be a saved search or a dashboard panel) and storing these results in a summary index, allowing dashboards to load faster by retrieving the pre-computed data instead of running the full search each time. This technique is especially useful for dashboards that rely on complex searches or searches over large datasets.

NEW QUESTION # 23

.....

It is known to us that having a good job has been increasingly important for everyone in the rapidly developing world; it is known to us that getting a Splunk Core Certified Advanced Power User certification is becoming more and more difficult for us. That is the reason that I want to introduce you our SPLK-1004 prep torrent. I promise you will have no regrets about reading our introduction.
