If you try to get the AWS Certified Solutions Architect - Associate (SAA-C02) certification that you will find there are so many chances wait for you. You can get a better job; you can get more salary. But if you are trouble with the difficult of AWS-Solutions-Architect-Associate exam, you can consider choose our AWS-Solutions-Architect-Associate Exam Questions to improve your knowledge to pass AWS-Solutions-Architect-Associate exam, which is your testimony of competence. Now we are going to introduce our AWS-Solutions-Architect-Associate test guide to you, please read it carefully.

The AWS Certified Solutions Architect - Associate (SAA-C02) exam is designed for individuals who want to validate their knowledge and skills in designing and deploying scalable, highly available, and fault-tolerant systems on Amazon Web Services (AWS). AWS Certified Solutions Architect - Associate (SAA-C02) certification is one of the most popular and in-demand credentials in the cloud computing industry today. Successful completion of the exam demonstrates the ability to identify and define requirements for AWS-based applications, as well as the ability to provide guidance on architectural best practices.

Amazon AWS Certified Solutions Architect - Associate (SAA-C02) Sample Questions (Q405-Q410):

NEW QUESTION # 405

Complete this statement: "When you load your table directly from an Amazon _____ table, you have the option to control the amount of provisioned throughput you consume."

- A. DataPipeline
- B. S3
- C. RDS
- **D. DynamoDB**

Answer: D

Explanation:

When you load your table directly from an Amazon DynamoDB table, you have the option to control the amount of Amazon DynamoDB provisioned throughput you consume.

NEW QUESTION # 406

A company has an application that places hundreds of .csv files into an Amazon S3 bucket every hour. The files are 1 GB in size. Each time a file is uploaded, the company needs to convert the file to Apache Parquet format and place the output file into an S3 bucket.

Which solution will meet these requirements with the LEAST operational overhead?

- A. Create an Apache Spark job to read the .csv files, convert the files to Parquet format, and place the output files in an S3 bucket. Create an AWS Lambda function for each S3 PUT event to invoke the Spark job.
- B. Create an AWS Lambda function to download the .csv files, convert the files to Parquet format, and place the output files in an S3 bucket. Invoke the Lambda function for each S3 PUT event.
- C. Create an AWS Glue table and an AWS Glue crawler for the S3 bucket where the application places the .csv files. Schedule an AWS Lambda function to periodically use Amazon Athena to query the AWS Glue table, convert the query results into Parquet format, and place the output files into an S3 bucket.
- **D. Create an AWS Glue extract, transform, and load (ETL) job to convert the .csv files to Parquet format and place the output files into an S3 bucket. Create an AWS Lambda function for each S3 PUT event to invoke the ETL job.**

Answer: D

NEW QUESTION # 407

An application running on an Amazon EC2 instance needs to securely access files on an Amazon Elastic File System (Amazon EFS) system. The EFS files are stored using encryption at rest. Which solution for accessing the files is MOST secure?

- **A. Enable TLS when mounting Amazon EFS**
- B. Store the encryption key in an Amazon S3 bucket and use IAM roles to grant the EC2 instance access permission
- C. Store the encryption key in the code of the application
- D. Enable AWS Key Management Service (AWS KMS) when mounting Amazon EFS

Answer: A

NEW QUESTION # 408

A solutions architect is designing the architecture for a new web application. The application will run on AWS Fargate containers with an Application Load Balancer (ALB) and an Amazon Aurora PostgreSQL database.

The web application will perform primarily read queries against the database.

What should the solutions architect do to ensure that the website can scale with increasing traffic? (Select TWO.)

- **A. Enable auto scaling on the ALB to scale the load balancer horizontally.**
- B. Configure Amazon Elastic Container Service (Amazon ECS) Service Auto Scaling with a target tracking scaling policy that is based on CPU utilization.
- **C. Configure Aurora Auto Scaling to adjust the number of Aurora Replicas in the Aurora cluster dynamically.**
- D. Configure an Amazon Elastic Container Service (Amazon ECS) cluster in each Availability Zone to distribute the load across multiple Availability Zones.
- E. Enable cross-zone load balancing on the ALB to distribute the load evenly across containers in all Availability Zones.

Answer: A,C

NEW QUESTION # 409

A company is migrating an application from on-premises servers to Amazon EC2 instances. As part of the migration design requirements, a solutions architect must implement infrastructure metric alarms. The company does not need to take action if CPU utilization increases to more than 50% for a short burst of time.

However, if the CPU utilization increases to more than 50% and read IOPS on the disk are high at the same time, the company needs to act as soon as possible. The solutions architect also must reduce false alarms.

What should the solutions architect do to meet these requirements?

- A. Create Amazon CloudWatch dashboards to visualize the metrics and react to issues quickly.
- **B. Create Amazon CloudWatch composite alarms where possible.**
- C. Create Amazon CloudWatch Synthetics canaries to monitor the application and raise an alarm.
- D. Create single Amazon CloudWatch metric alarms with multiple metric thresholds where possible.

Answer: B

Explanation:

Composite alarms determine their states by monitoring the states of other alarms. You can **use composite alarms to reduce alarm noise**. For example, you can create a composite alarm where the underlying metric alarms go into ALARM when they meet specific conditions. You then can set up your composite alarm to go into ALARM and send you notifications when the underlying metric alarms go into ALARM by configuring the underlying metric alarms never to take actions. Currently, composite alarms can take the following actions:
