P.S. Free & New 2V0-13.25 dumps are available on Google Drive shared by PassReview: <https://drive.google.com/open?id=1uREXg4jqP99OwTSnQ-ZziYtxNRPo62Xw>

Are you considering taking the VMware 2V0-13.25 exam? Passing this exam can be a challenge if you don't prepare with the right study material. PassReview provides accurate and authentic VMware 2V0-13.25 Exam Questions to help you prepare for the VMware Cloud Foundation 9.0 Architect. PassReview strives to provide quality information and a comfortable learning environment for VMware 2V0-13.25 Exam candidates. The study material is available in two formats: VMware 2V0-13.25 exam questions in pdf format and an online VMware 2V0-13.25 practice test engine. Both formats are designed to help you clear the VMware Cloud Foundation 9.0 Architect (2V0-13.25) with ease.

Many candidates find the VMware 2V0-13.25 exam preparation difficult. They often buy expensive study courses to start their VMware 2V0-13.25 certification exam preparation. However, spending a huge amount on such resources is difficult for many VMware Cloud Foundation 9.0 Architect exam applicants. The latest VMware 2V0-13.25 Exam Dumps are the right option for you to prepare for the VMware 2V0-13.25 certification test at home.

2V0-13.25 Latest Test Questions - 2V0-13.25 Official Cert Guide

The PassReview offers latest VMware Cloud Foundation 9.0 Architect 2V0-13.25 exam questions and answers, with VMware 2V0-13.25 exam practice test questions you can ace your VMware 2V0-13.25 exam preparation simply and quickly and pass the final 2V0-13.25 Exam easily. The VMware 2V0-13.25 exam practice test questions will assist you in VMware 2V0-13.25 exam preparation.

VMware Cloud Foundation 9.0 Architect Sample Questions (Q98-Q103):

NEW QUESTION # 98

A customer has a requirement to use isolated domains in VMware Cloud Foundation but is constrained to a single NSX management pane.

What should the architect recommend satisfying this requirement?

- A. A Shared NSX Instance
- B. NSX Federation
- C. An NSX VPC
- D. A 1:1 NSX Instance

Answer: C

Explanation:

In VMware Cloud Foundation (VCF) 5.2, isolated domains within a single NSX management pane (i.e., a single NSX Manager cluster) require a solution that provides logical isolation without additional management overhead.

Option A, "An NSX VPC" (Virtual Private Cloud), is the correct choice as it enables tenant-specific isolated networking environments within a single NSX instance, managed via the same NSX Manager. Introduced in NSX-T 3.2 (supported in VCF 5.2), NSX VPCs allow segmentation with dedicated routing, security policies, and resource allocation, meeting the isolation

requirement efficiently.

Option B, "A Shared NSX Instance," implies no isolation, contradicting the requirement.

Option C, "NSX Federation," supports multi-site management with multiple NSX Managers, exceeding the single-pane constraint.

Option D, "A 1:1 NSX Instance," suggests a dedicated NSX Manager per domain, also violating the constraint. NSX VPC is explicitly designed for this use case in VCF.

Reference: VMware Cloud Foundation 5.2 Networking Guide, Section on NSX-T VPCs; NSX-T 3.2 Administration Guide, Chapter on Virtual Private Clouds.

NEW QUESTION # 99

What are the common issues affecting VMware storage performance with Broadcom hardware?

- A. Insufficient storage capacity
- B. Incorrect RAID configuration
- C. Driver incompatibility
- D. Disk failure or degradation

Answer: B,C,D

Explanation:

Disk failure, RAID misconfiguration, driver issues, and capacity limitations are common performance issues.

NEW QUESTION # 100

Which VMware tools assist in cloud cost optimization in VMware Cloud Foundation?

- A. VMware vRealize Operations
- B. VMware vRealize Automation
- C. VMware vSAN
- D. VMware vSphere

Answer: A,B

Explanation:

vRealize Operations and vRealize Automation assist with cloud cost optimization.

NEW QUESTION # 101

Which of the following are key capabilities of VMware NSX in VMware Cloud Foundation?

- A. Network virtualization
- B. Backup and disaster recovery
- C. Storage management
- D. Security and micro-segmentation

Answer: A,D

Explanation:

VMware NSX provides network virtualization and security, crucial for managing the network in VMware Cloud Foundation.

NEW QUESTION # 102

A customer has stated the following requirements for Aria Automation within their VCF implementation:

Users must have access to specific resources based on their company organization.

Developers must only be able to provision to the Development environment.

Production workloads can be placed on DMZ or Production clusters.

What two design decisions must be implemented to satisfy these requirements? (Choose two.)

- A. Users' access to resources will be controlled by tenant membership.
- B. Separate cloud zones will be configured for Development and Production.

- C. Separate tenants will be configured for Development and Production.
- D. Users' access to resources will be controlled by project membership.

Answer: B,D

Explanation:

In VMware Cloud Foundation (VCF) 5.2, Aria Automation (formerly vRealize Automation) manages resource provisioning and access control. The requirements involve role-based access, environment isolation, and workload placement flexibility. Let's analyze each option:

Option A: Separate tenants will be configured for Development and Production. Aria Automation in VCF 5.2 operates as a single-tenant application by default, integrated with SDDC Manager and vCenter. Multi-tenancy (separate tenants) is an advanced configuration typically used for service providers, not standard VCF private cloud designs. The VMware Aria Automation Installation Guide notes that multi-tenancy adds complexity and isn't required for environment segregation within a single organization. Instead, projects and cloud zones handle these needs, making this unnecessary.

Option B: Users' access to resources will be controlled by tenant membership. Tenant membership applies in multi-tenant setups, where users are assigned to distinct tenants (e.g., Dev vs. Prod). Since VCF 5.2 typically uses a single tenant, and the requirements can be met with projects (group-based access), this isn't a must-have decision. The VCF 5.2 Architectural Guide favors project-based access over tenant separation for organizational control, rendering this optional.

Option C: Users' access to resources will be controlled by project membership. Projects in Aria Automation group users and define their access to resources (e.g., cloud zones, policies). To meet the first requirement (access based on company organization) and the second (developers provisioning only to Development), projects can restrict developers to a "Dev" project linked to a Development cloud zone, while other teams (e.g., ops) access Production/DMZ via separate projects. The VMware Aria Automation Administration Guide confirms projects as the primary mechanism for role-based access in VCF, making this a required decision.

Option D: Separate cloud zones will be configured for Development and Production. Cloud zones in Aria Automation map to vSphere clusters or resource pools (e.g., Development, Production, DMZ clusters). To satisfy the second requirement (developers limited to Development) and the third (Production workloads on DMZ or Production clusters), separate cloud zones ensure environment isolation and placement flexibility. The VCF 5.2 Architectural Guide mandates cloud zones for workload segregation, tying them to projects for access control, making this essential.

Conclusion:

C: Project membership enforces user access per organization and restricts developers to Development, meeting the first two requirements.

D: Separate cloud zones isolate Development from Production/DMZ, enabling precise workload placement per the third requirement.

These decisions align with Aria Automation's design in VCF 5.2.
