## Go With Google Chrome-Enterprise-Administrator PDF Questions [2025] For Instant Success

Up to now we classify our Chrome-Enterprise-Administrator exam questions as three different versions. They are pdf, software and the most convenient one APP online. Though the content of these three versions is the same, but their displays are different. Each of them has their respective feature and advantage including new information that you need to know to pass the Chrome-Enterprise-Administrator test. So you can choose the version of Chrome-Enterprise-Administrator training quiz according to your personal preference.

## Google Professional Chrome Enterprise Administrator Certification Exam Sample Questions (Q15-Q20):

### NEW QUESTION # 15

A small business wants to have all of their macOS devices enroll in Chrome Enterprise Core. They do not have a Mobile Device Management solution but do maintain a base image for their Mac computers Where should they put the enrollment token\*?

- A. /Library/Google/Chrome/CloudManagementEnrollmentToken
- B. HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Google\Chrome\CloudManagementEnrollmentToken
- C. /Library/Google/Chrome/Enrollment/DeviceManagementToken
- D. /etc/opt/chrome/policies/enrollment/CloudManagementEnrollmentToken

**Answer: A**

Explanation:

For macOS devices without MDM, the enrollment token can be embedded in the base image. The correct path for placing the cloud management enrollment token on macOS is ``/Library/Google/Chrome/CloudManagementEnrollmentToken``. The other paths listed are for Windows Registry (A), a non-standard Linux path (C), and a potentially incorrect macOS path (D).

#### NEW QUESTION # 16

Which operating system must be used to self-host a Chrome extension\*?

- A. macOS
- B. Windows 11
- C. ChromeOS
- **D. Linux**

**Answer: D**

Explanation:

While the provided study guide doesn't explicitly detail the OS requirements for self-hosting Chrome extensions, general web hosting best practices suggest that Linux is a common and robust platform for serving files and managing web-related services. Its open-source nature, command-line interface, and extensive server software support make it well-suited for self-hosting compared to desktop-centric operating systems like Windows 11 or macOS, and the client-focused ChromeOS. Self-hosting typically involves setting up a web server to distribute the extension files, a task commonly performed on Linux servers.

#### NEW QUESTION # 17

The security team requires Chrome to be updated on computers that only have intranet access with no available internet connectivity. These computers cannot be restarted, and Chrome is not updating. How can Chrome be updated?

- **A. Run the Chrome installer**
- B. Use force relaunch after period
- C. Use a target version
- D. Run auto-update.

**Answer: A**

Explanation:

For machines with no internet connectivity, automatic updates will not work. The only way to update Chrome in this scenario is to manually run the Chrome installer with an updated version obtained through an alternative method (e.g., downloaded on a connected machine and transferred). Auto-update requires internet access, setting a target version only dictates the desired version for automatic updates, and force relaunch requires an update to be downloaded first.

#### NEW QUESTION # 18

How often do extensions update'?"

- **A. When Chrome is running, the update occurs within the first few minutes of launching Chrome and then again every few hours Updates occur when users sign into the Chrome Web Store**
- B. When Chrome is not running, the update occurs within the first few minutes of OS loading and then again every few hours when a new version is available in the Chrome Web Store, even when Chrome is not running
- C. Extensions update immediately whenever the developer publishes a new version to the Chrome Web Store, regardless of whether Chrome is running
- D. Extensions only update when the user manually initiates the update process from the Chrome Web Store's extension management page

**Answer: A**

Explanation:

Chrome checks for extension updates periodically when the browser is running. This check typically happens within the first few minutes of launching Chrome and then again every few hours. While updates are triggered by developers publishing to the Chrome Web Store, the actual update on the user's browser happens when Chrome is active and performs these periodic checks. Option A is incorrect as extensions generally don't update when Chrome is not running. Option C describes a manual update process, which is not the default behavior. Option D is incorrect because the update on the user's end is dependent on Chrome being active and checking for updates.

#### NEW QUESTION # 19

Where can information about all of the profiles associated with a browser be found?

- A. Chrome Insights report
- B. Managed devices
- C. Chrome log events
- **D. Managed browsers detail**

**Answer: D**

Explanation:

The "Managed browsers detail" page in the Google Admin console provides specific information about individual managed Chrome browser instances. This includes details about the profiles associated with that browser, such as the signed-in users and their management status. Chrome log events might contain some profile-related information but are more focused on actions. The "Managed devices" section primarily focuses on ChromeOS devices. The "Chrome Insights report" provides a high-level overview rather than detailed profile information for a specific browser instance.

#### NEW QUESTION # 20

.....

Each format has a pool of Professional Chrome Enterprise Administrator Certification Exam (Chrome-Enterprise-Administrator) actual questions which have been compiled under the guidance of thousands of professionals worldwide. Questions in this product will appear in the Google Chrome-Enterprise-Administrator final test.
