VMware 2V0-13.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Troubleshoot and Optimize the VMware Solution: This section of the exam measures the skills of Operations Engineers. There are no explicitly testable objectives provided in this domain, but candidates are expected to understand troubleshooting and optimization principles to maintain the VMware environment effectively in real-world deployments.
Topic 2	<ul style="list-style-type: none">• VMware Products and Solutions: This section of the exam evaluates the knowledge of VMware Solution Specialists and focuses on VMware Cloud Foundation (VCF). Candidates must be able to identify and differentiate between various VCF architecture options in given scenarios. The emphasis is on understanding the key products and how they integrate into enterprise design choices.

Topic 3	<ul style="list-style-type: none"> • Install, Configure, Administrate the VMware Solution: This section of the exam is relevant to System Administrators. Although it has no directly testable objectives, it underlines the expectation that candidates are familiar with installation, configuration, and administration tasks that form the foundation for VMware Cloud Foundation solutions.
Topic 4	<ul style="list-style-type: none"> • IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers the ability to distinguish business requirements from technical ones. It expects candidates to understand the differences between conceptual, logical, and physical designs while also differentiating requirements, assumptions, constraints, and risks. Core concepts of availability, manageability, performance, recoverability, and security (AMPRS) are tested. Learners also need to document risk mitigation strategies, design decisions, and create a validation strategy that ties requirements to practical implementation.
Topic 5	<ul style="list-style-type: none"> • Plan and Design the VMware Solution: This section measures the skills of Cloud Infrastructure Designers. It focuses on gathering and analyzing business requirements and then transforming them into conceptual, logical, and physical models of VMware Cloud Foundation. Candidates are expected to identify prerequisites and make design decisions across fleet topologies, networking, management domains, workload domains, automation, and operations. The section also includes designing for availability within and across zones, creating strategies for manageability such as lifecycle, scalability, and capacity, and ensuring performance and recoverability through BCDR strategies. Additional emphasis is given to designing secure environments, workload migration strategies, and creating consumption, automation, and monitoring strategies to support modern applications and governance.

VMware Cloud Foundation 9.0 Architect Sample Questions (Q21-Q26):

NEW QUESTION # 21

Which Broadcom solutions support the creation of a highly scalable VMware environment?

- A. vSphere DRS
- B. Broadcom NVMe SSD
- C. Broadcom 25GbE Ethernet Adapter
- D. vSAN

Answer: B,C,D

Explanation:

Broadcom 25GbE Ethernet Adapters, vSAN, and NVMe SSDs support scaling in VMware environments by improving network speed, storage capacity, and performance.

NEW QUESTION # 22

Which troubleshooting steps are crucial when encountering storage latency in VMware environments using Broadcom solutions?

- A. Verify RAID controller settings
- B. Add more storage resources
- C. Check Broadcom NVMe SSD health
- D. Verify VMware storage settings

Answer: A,C,D

Explanation:

Verifying RAID controller settings, checking SSD health, and reviewing VMware storage settings are key troubleshooting steps.

NEW QUESTION # 23

Which design defines how to arrange and use components and features of the infrastructure to satisfy service dependencies and other relationships specified in the Conceptual Model?

- A. Configuration Guide
- B. Physical Design
- C. High Availability Design
- **D. Logical Design**

Answer: D

Explanation:

The Conceptual Model identifies high-level requirements, constraints, assumptions, and risks. The Logical Design translates those into how solution components (clusters, networks, storage, security zones, etc.) are structured to meet dependencies and requirements.

* Physical Design comes after Logical Design and defines specific hardware, IP addresses, VLANs, etc.

* High Availability Design is a subset of the logical/physical design focusing only on resiliency.

* Configuration Guide is implementation-level documentation, not design.

Thus, the Logical Design defines how the infrastructure's capabilities are arranged to satisfy conceptual dependencies.

NEW QUESTION # 24

Which two VCF components are replicated across availability zones in a VMware Cloud Foundation (VCF) Fleet with Disaster Recovery model design with two availability zones?

- **A. NSX**
- B. SDDC Manager
- C. VCF Automation
- D. VCF Operations
- **E. vCenter**

Answer: A,E

Explanation:

In a VCF Fleet with Disaster Recovery (AZ model):

* vCenter is replicated to ensure management of vSphere workloads continues after a site failure.

* NSX is replicated for networking continuity (segments, TEPs, Edge services).

Other components:

* SDDC Manager is fleet-level and not replicated per AZ.

* VCF Automation and VCF Operations are optional add-ons and not replicated automatically by the DR model.

Thus, vCenter and NSX are replicated across AZs for resiliency.

Reference: VMware Cloud Foundation 9.0 - Fleet with Disaster Recovery (AZ Replication Components).

NEW QUESTION # 25

Which feature allows administrators to migrate storage without disrupting VM operations?

- A. vSAN
- B. Snapshots
- **C. Storage vMotion**
- D. DRS

Answer: C

Storage vMotion enables live storage migration without downtime.
