

100% Sitecore-XM-Cloud-Developer Accuracy & Sitecore-XM-Cloud-Developer Latest Guide Files

2025 Latest itPass4sure Sitecore-XM-Cloud-Developer PDF Dumps and Sitecore-XM-Cloud-Developer Exam Engine Free Share: <https://drive.google.com/open?id=1xYu6MzBmoIs4j6kj9d3TMRsVWN4ayzn>

What is your reason for wanting to be certified with Sitecore-XM-Cloud-Developer? I believe you must want to get more opportunities. As long as you use Sitecore-XM-Cloud-Developer learning materials and get a Sitecore-XM-Cloud-Developer certificate, you will certainly be appreciated by the leaders. As you can imagine that you can get a promotion sooner or latter, not only on the salary but also on the position, so what are you waiting for? Just come and buy our Sitecore-XM-Cloud-Developer study braindumps.

Are you worrying about how to pass Sitecore Sitecore-XM-Cloud-Developer test? Now don't need to worry about the problem. itPass4sure that committed to the study of Sitecore Sitecore-XM-Cloud-Developer certification exam for years has a wealth of experience and strong exam dumps to help you effectively pass your exam. Whether to pass the exam successfully, it consists not in how many materials you have seen, but in if you find the right method. itPass4sure is the right method which can help you sail through Sitecore Sitecore-XM-Cloud-Developer Certification Exam.

>> 100% Sitecore-XM-Cloud-Developer Accuracy <<

Quiz Professional Sitecore - Sitecore-XM-Cloud-Developer - 100% Sitecore XM Cloud Developer Certification Exam Accuracy

We consider the actual situation of the test-takers and provide them with high-quality learning materials at a reasonable price. Choose the Sitecore-XM-Cloud-Developer test guide absolutely excellent quality and reasonable price, because the more times the user buys the Sitecore-XM-Cloud-Developer test guide, the more discounts he gets. In order to make the user's whole experience smoother, we also provide a thoughtful package of services. Once users have any problems related to the Sitecore-XM-Cloud-Developer learning questions, our staff will help solve them as soon as possible.

Sitecore XM Cloud Developer Certification Exam Sample Questions (Q49-Q54):

NEW QUESTION # 49

What is the sitecore.json file in a development solution?

- A. The environment variables file for the Sitecore Docker deployment
- **B. The configuration file for the Sitecore development tooling**
- C. The solution integration file needed for deploying code changes to the environment
- D. A custom configuration file defining a solution for headless environments

Answer: B

Explanation:

In Sitecore headless development (JSS with Next.js), the sitecore.json file plays a crucial role in configuring Sitecore development

tooling. It contains settings related to JSS applications, including Sitecore API endpoints, deployment configurations, and serialization settings.

* The `sitecore.json` file is primarily used in JSS applications to configure development tools such as:

* JSS CLI (@sitecore-jss/sitecore-jss-cli)

* API endpoint definitions

* Serialization and deployment settings

* This file is located at the root of a JSS-based Sitecore project.

Correct answer: B (The configuration file for the Sitecore development tooling) Example: Typical `sitecore.json` structure {

```
"instancePath": "..\\docker\\build",
"apiKey": "{YOUR_SITECORE_API_KEY}",
"sitecore": {
  "instanceUrl": "https://xmcloud.localhost",
  "layoutService": "/sitecore/api/layout/render/jss"
},
"jss": {
  "appName": "my-jss-app",
  "watchPaths": ["src/components", "src/content"]
},
"serialization": {
  "root": "./src/sitecore",
  "modules": ["core", "master"]
}
}
```

* Defines the Sitecore instance URL for headless applications.

* Specifies API keys for connecting with Sitecore Layout Service & GraphQL API.

* Controls serialization settings for content synchronization.

* Configures JSS app name and deployment paths.

* Used by JSS CLI for deploying and syncing data with Sitecore.

Key Features of `sitecore.json`:

* (A) The environment variables file for the Sitecore Docker deployment # Incorrect

* Environment variables for Sitecore Docker are typically stored in `.env` or `docker-compose.override.yml`, not `sitecore.json`.

* The `sitecore.json` file is specific to Sitecore JSS and development tooling, not Docker.

* (C) The solution integration file needed for deploying code changes to the environment # Incorrect

* Code deployment is managed by XM Cloud Deploy, Next.js build processes, or GitHub Actions.

* `sitecore.json` is used for development configuration, not deployment automation.

* (D) A custom configuration file defining a solution for headless environments # Incorrect

* While `sitecore.json` is related to headless development, it is not a custom configuration file.

* It is a standardized configuration file for Sitecore's JSS tooling and CLI.

Why Other Options Are Incorrect:

* Ensure correct API keys and Sitecore instance URL are configured.

* Use serialization settings to sync Sitecore items between local and cloud environments.

* Leverage JSS CLI (`jss deploy config`) to verify the `sitecore.json` settings before deployment.

Best Practices for Using `sitecore.json` in XM Cloud Development

* Sitecore JSS Documentation- Understanding `sitecore.json`

* JSS CLI & Development Setup- Sitecore JSS CLI Guide

* Sitecore XM Cloud Serialization- Using Serialization in Headless Development References:

NEW QUESTION # 50

Why should a developer assign security to roles instead of users when setting up security on a site?

- A. Security roles can assign individual rights and permissions to be configured by users.
- B. Individual users with a role can set and configure their own item security permissions.
- **C. Security can be managed more efficiently as the rights and permissions apply to a group of users.**
- D. Role-based security allows multiple users to have the same username.

Answer: C

Explanation:

According to the Sitecore XM Cloud Documentation for Developers¹, security roles define how different users access different

types of records in Sitecore. To control access to data and resources, you can create or modify security roles and change the security roles that are assigned to your users. A user can have multiple security roles. Security role privileges are cumulative. Users are granted the privileges that are available in each role that's assigned to them².

This makes it easier for you to manage your security system because you do not necessarily have to assign access rights for each item in your content tree. Instead, you only need to assign and manage the access rights on the parent items and then specify whether their descendants can inherit these access rights³.

NEW QUESTION # 51

Which of the following must be done to delete or remove a user from an administrator role?

- **A. Delete the user or remove their administrator role from the Sitecore Cloud Portal.**
- B. Delete the user or remove their administrator role from the XM Cloud Deploy app.
- C. Create a new user account and assign a new role from the Sitecore Cloud Portal.
- D. Create a new user account and assign a new role from the XM Cloud Deploy app.

Answer: A

Explanation:

According to the Sitecore XM Cloud Documentation for Developers¹, the Sitecore Cloud Portal is where you can manage access to your DXP products, create users and manage their access to all your Sitecore DXP products. To delete or remove a user from an administrator role, you need to follow these steps²:

Sign in to the Sitecore Cloud Portal using your administrator account.

In the left navigation pane, click Users.

In the Users list, find the user you want to delete or remove from the administrator role and click the Edit icon.

In the Edit user dialog box, you can either delete the user by clicking the Delete user button or remove the administrator role by deselecting the Administrator checkbox.

Click Save to confirm your changes.

NEW QUESTION # 52

A developer wants to create a webhook that sends an HTTP request to a specified endpoint when the workflow moves to the approved state. What type of webhook should they use?

- **A. Submit action**
- B. Event handler
- C. Submit handler
- D. Validation action

Answer: A

Explanation:

In Sitecore XM Cloud, a webhook submit action is used to send an HTTP request to a specified endpoint when an item changes workflow state or a workflow command runs. Therefore, for a developer wanting to create a webhook that triggers when the workflow moves to the approved state, a webhook submit action would be the appropriate choice.

References: This information is confirmed by the Sitecore XM Cloud documentation, which details the different types of webhooks available and their specific uses, including the webhook submit action for workflow state changes¹.

NEW QUESTION # 53

A developer is tasked with creating an item using the Sitecore Authoring and Management GraphQL API.

Which of the following GraphQL mutations is the correct way to create a new item?

- A. createTemplateItem
- B. createOrUpdateItem
- **C. createItem**
- D. updateItem

Answer: C

Explanation:

The correct GraphQL mutation to create a new item in Sitecore XM Cloud is `createItem`. This mutation allows developers to specify the necessary details such as the item's name, template ID, parent ID, language, and fields to create a new content item within the Sitecore content tree.

References: The usage of the `createItem` mutation is documented in the Sitecore XM Cloud Developer's Guide, which provides examples and explanations for authoring operations, including item creation¹. Additionally, the Sitecore Stack Exchange provides insights into the available mutations for item management, confirming the use of `createItem` for creating new items².

NEW QUESTION # 54

.....

You will get real questions and accurate answers from Sitecore-XM-Cloud-Developer exam pdf torrent for your preparation of Sitecore-XM-Cloud-Developer certification. When you choose itPass4sure Sitecore-XM-Cloud-Developer exam dumps, you will enjoy instant access to the Sitecore-XM-Cloud-Developer practice papers. Moreover, free updates for Sitecore-XM-Cloud-Developer latest dumps are available for 1 year after the purchase. With the help of the Sitecore-XM-Cloud-Developer Test Engine, you can not only revisit the mistakes you made, but also can retake tests until you are satisfied. With the practice and Sitecore-XM-Cloud-Developer valid study material, you will get your Sitecore Sitecore-XM-Cloud-Developer certification with ease.
