

100% Success Guarantee by Using SAP C-ABAPD-2507 Exam Questions and Answers

P.S. Free & New C-ABAPD-2507 dumps are available on Google Drive shared by ExamsTorrent: <https://drive.google.com/open?id=1oMuGjk-2IJT9vueHq0UKNhhKcNR01P8AI>

Solutions is one of the top platforms that has been helping SAP C-ABAPD-2507 exam candidates for many years. Over this long time period countless candidates have passed their dream C-ABAPD-2507 exam. They all got help from Exams. The SAP C-ABAPD-2507 questions are designed by experience and qualified C-ABAPD-2507 expert. They work together and strive hard to design and maintain the top standard of ExamsTorrent C-ABAPD-2507 Questions. So you rest assured that the SAP C-ABAPD-2507 questions you will not only ace your SAP Certified Associate - Back-End Developer - ABAP Cloud certification exam preparation but also be ready to perform well in the final C-ABAPD-2507 exam.

C-ABAPD-2507 study material applies to all types of candidates. Buying a set of learning materials is not difficult, but it is difficult to buy one that is suitable for you. For example, some learning materials can really help students get high scores, but they usually require users to have a lot of study time, which is difficult for office workers. However, C-ABAPD-2507 Study Material is to help students improve their test scores by improving their learning efficiency. Therefore, users can pass exams with very little learning time.

Windows computers support the desktop practice test software. ExamsTorrent has a complete support team to fix issues of SAP C-ABAPD-2507 PDF QUESTIONS software users. ExamsTorrent practice tests (desktop and web-based) produce score report at the end of each attempt. So, that users get awareness of their SAP Certified Associate - Back-End Developer - ABAP Cloud (C-ABAPD-2507) preparation status and remove their mistakes.

SAP C-ABAPD-2507 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Core ABAP Programming: This section of the exam measures skills of SAP Application Programmers and covers foundational ABAP programming knowledge. Topics include modularization techniques, internal tables, control structures, and classical report programming. Mastery of these concepts is essential for building efficient ABAP applications.
Topic 2	<ul style="list-style-type: none">• Object-Oriented Design: This section of the exam measures skills of SAP ABAP Developers and covers the basics of object-oriented programming in ABAP. It includes concepts such as classes, interfaces, inheritance, polymorphism, and encapsulation, all of which are necessary for building robust and scalable ABAP applications.

Topic 3	<ul style="list-style-type: none"> ABAP Core Data Services and Data Modeling: This section of the exam measures skills of SAP ABAP Developers and covers the creation, definition, and use of Core Data Services (CDS) views for data modeling within SAP environments. Candidates are expected to understand annotations, data definitions, and the role of CDS in enabling advanced data processing and integration across SAP systems.
Topic 4	<ul style="list-style-type: none"> SAP Clean Core Extensibility and ABAP Cloud: This section of the exam measures skills of SAP Application Programmers and covers the clean core principles and extensibility options within SAP BTP. It also includes cloud-native ABAP development practices, emphasizing the creation of upgrade-stable and maintainable extensions aligned with SAP's cloud strategy.

SAP Certified Associate - Back-End Developer - ABAP Cloud Sample Questions (Q75-Q80):

NEW QUESTION # 75

In class ZCL_CLASS_A, you use the statement DATA var TYPE ***

What may stand in place of ***? Note: There are 2 correct answers to this question.

- A. The name of a type defined privately in class ZCL_CLASS_A
- B. The name of a data element from the ABAP Dictionary
- C. The name of a domain from the ABAP Dictionary
- D. The name of a type defined privately in another class

Answer: B,C

Explanation:

In class ZCL_CLASS_A, you use the statement DATA var TYPE *** to declare a data object named var with a data type specified by ***. The data type can be any of the following1:

A predefined ABAP type, such as i, f, c, string, xstring, and so on.

A data element from the ABAP Dictionary, such as matnr, carrid, buksr, and so on. A data element defines the semantic and technical attributes of a data field, such as the domain, the length, the data type, the description, and the value range2.

A domain from the ABAP Dictionary, such as matnr_d, carrid_d, buksr_d, and so on. A domain defines the technical attributes of a data field, such as the data type, the length, the output length, the number of decimal places, and the value range3.

A type defined globally in a class, an interface, or a type pool, such as zcl_class_b=>type_a, zif_interface_c=>type_b, ztype_pool_d=>type_c, and so on. A global type is a type that is defined in a global repository object and can be used in any program or class4.

A type defined locally in the current class, such as type_a, type_b, type_c, and so on. A local type is a type that is defined in the declaration part of a class and can only be used within the class5.

Therefore, the possible values for *** are B. the name of a data element from the ABAP Dictionary and D. the name of a domain from the ABAP Dictionary. The other options are not valid because:

A. The name of a type defined privately in class ZCL_CLASS_A is a local type and cannot be used with the DATA statement. A local type can only be used with the TYPES statement5.

C. The name of a type defined privately in another class is a private type and cannot be accessed from outside the class. A private type can only be used within the class that defines it.

NEW QUESTION # 76

Given the following ABAP SQL statement excerpt from an ABAP program:

```
SELECT SINGLE *
```

```
FROM spfli
```

```
WHERE carrid = 'LH' AND connid = '0400'
```

```
INTO @DATA(wa).
```

You are given the following information:

- * The data source spfli on line #2 is an SAP HANA database table.
- * spfli will be a large table with over one million rows.
- * This program is the only one in the system that accesses the table.
- * This program will run rarely.

Based on this information, which of the following general settings should you set for the spfli database table?

Note: There are 2 correct answers to this question.

- A. "Storage Type" to "Column Store"
- B. "Load Unit" to "Column Loadable"
- C. "Load Unit" to "Page Loadable"
- D. "Storage Type" to "Row Store"

Answer: C,D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In SAP HANA, the choice of storage type and load unit depends on access patterns, table size, and usage frequency.

Here's how each part applies:

* A. "Storage Type" to "Row Store" - This is correct. Since:

* The table is accessed by only one program.

* The program runs rarely.

* The access pattern is row-oriented (SELECT SINGLE with filters).

Row store is more suitable for rare access with small result sets and no aggregation.

* D. "Load Unit" to "Page Loadable" - This is correct. Since the program runs infrequently, loading the entire column into memory (column loadable) is not efficient. Page-loadable units load only required parts into memory on demand, which reduces memory footprint.

Incorrect options:

* B. "Storage Type" to "Column Store" - Incorrect here. Column store is ideal for frequent reads, aggregations, or analytics, not for rarely accessed tables with simple lookups.

* C. "Load Unit" to "Column Loadable" - Also not optimal for rarely accessed data. Column loadable preloads entire columns into memory, which is memory-intensive and unnecessary in this case.

Reference: ABAP CDS Development Guide and SAP HANA Table Storage Guidelines - Recommended storage strategies based on access pattern, frequency, and usage role.

NEW QUESTION # 77

Which statement creates a reference variable for class CL_VEHICLE?

- A. DATA lo_vehicle TYPE REF OF cl_vehicle.
- B. DATA lo_vehicle TYPE REF TO cl_vehicle.
- C. DATA lo_vehicle LIKE REF cl_vehicle.
- D. TYPES lo_vehicle TYPE cl_vehicle.

Answer: B

NEW QUESTION # 78

Which of the following pre-defined ABAP data types is a complete data type?

- A. D
- B. N
- C. C
- D. P

Answer: D

NEW QUESTION # 79

What RESTful Application Programming feature is used to ensure the uniqueness of a semantic key?

- A. Determination
- B. None of the above
- C. Validation
- D. Action

Answer: C

Explanation:

Reference: SAP Help 1, page 7 - RAP Runtime and behavior definition section explains how validations are responsible for enforcing semantic consistency and uniqueness constraints.
