Prerequisites of Microsoft Power BI Data Analyst Certification Exam

The Microsoft Power BI Data Analyst Certification Exam is a test which assesses your ability to have a high-level understanding of the data analysis process, including collecting, analyzing and visualizing data. It is a certification that will help you gain the required skills to be able to work with business intelligence solutions and tools. To be eligible to take this exam, you must meet the following prerequisites:

- You have at least one year of experience working with relational databases, such as SQL Server or Oracle. In addition, you should have a basic understanding of how to create queries and reports using SQL Server Management Studio or Toad Data Point.
- You are a professional data analyst with 2-4 years of work experience or an IT professional with 2-4 years of experience.
- You have at least one year of experience using Power Query in Excel, or an equivalent experience using another data analysis tool.
- You have at least one year of experience using Power BI Desktop.

Microsoft PL-300 Exam is a certification test designed for individuals who want to validate their skills and knowledge in using Microsoft Power BI. PL-300 exam is also known as the Microsoft Power BI Data Analyst certification, and it covers a wide range of topics related to data analytics, business intelligence, and data visualization.

PL-300 Practice Test & Guide PL-300 Torrent

Since this format works on laptops, tablets, and smartphones, you can open it and read Microsoft PL-300 Questions without place and time restrictions.

Microsoft Power BI Data Analyst Sample Questions (Q422-Q427):

NEW QUESTION # 422

You have a report that contains a bar chart and a column chart. The bar chart shows customer count by customer segment. The column chart shows sales by month.

You need to ensure that when a segment is selected in the bar chart, you see which portion of the total sales for the month belongs to the customer segment.

How should the visual interactions be set on the column chart when the bar chart is selected?

- A. filter
- B. highlight
- C. no impact

Answer: B

Explanation:

Highlight will show the portion of Total Sales.

NEW QUESTION # 423

You need to create the Top Customers report.

Which type of filter should you use, and at which level should you apply the filter? To answer, select the appropriate options in the answer area.

NOTE; Each correct selection is worth one point.

NEW QUESTION # 424

You have the Power BI data model shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

When a table visual is added to a blank report page and populated by using the StoreID field from the Sales table, a [answer choice] is displayed.

Adding a page filter of Sales [StoreID] = 1 will filter the values displayed on the page from [answer choice].

Microsoft

distinct count of the StoreID values
list of all the StoreID values
list of the distinct StoreID values
sum of the StoreID values

all the tables related to the Sales table
only the Sales table
only the Store table
the Sales table and the Customer table

Answer:

Explanation:

When a table visual is added to a blank report page and populated by using the StoreID field from the Sales table, a [answer choice] is displayed.

▼
distinct count of the StoreID values
list of all the StoreID values
list of the distinct StoreID values
sum of the StoreID values

Adding a page filter of Sales[StoreID] = 1 will filter the values displayed on the page from [answer choice].

▼
all the tables related to the Sales table
only the Sales table
only the Store table
the Sales table and the Customer table

Explanation

When a table visual is added to a blank report page and populated by using the StoreID field from the Sales table, a [answer choice] is displayed.

▼
distinct count of the StoreID values
list of all the StoreID values
list of the distinct StoreID values
sum of the StoreID values

Adding a page filter of Sales[StoreID] = 1 will filter the values displayed on the page from [answer choice].

▼
all the tables related to the Sales table
only the Sales table
only the Store table
the Sales table and the Customer table

NEW QUESTION # 425

You import two Microsoft Excel tables named Customer and Address into Power Query. Customer contains the following columns:

Customer ID

Customer Name

Phone

Email Address

Address ID

Address contains the following columns:

Address ID

Address Line 1

Address Line 2

City

State/Region

Country

Postal Code

The Customer ID and Address ID columns represent unique rows.

You need to create a query that has one row per customer. Each row must contain City, State/Region, and Country for each customer.

What should you do?

- A. Group the Customer and Address tables by the Address ID column.
- B. Merge the Customer and Address tables.
- C. Transpose the Customer and Address tables.
- D. Append the Customer and Address tables.

Answer: B

Explanation:

There are two primary ways of combining queries: merging and appending.

When you have one or more columns that you'd like to add to another query, you merge the queries.

When you have additional rows of data that you'd like to add to an existing query, you append the query.

Reference:

NEW QUESTION # 426

You are creating a new semantic model in Microsoft Power BI Desktop.

You connect to a recently used data source and receive an error message indicating that the password is expired.

You need to update the credentials for the data source.

What should you do?

- A. From Data Source settings, select the data source, and then select Edit Permissions.
- B. From Options, select Data Load, and then select Clear Cache.
- C. From the Modeling tab, select Manage Roles, and then add a role.
- D. From Power Query Editor, select Refresh Preview.

Answer: A

NEW QUESTION # 427

.....
