

# Hot 1Z0-1072-25 Reliable Braindumps Pdf | Efficient 1Z0-1072-25: Oracle Cloud Infrastructure 2025 Architect Associate 100% Pass

P.S. Free & New 1Z0-1072-25 dumps are available on Google Drive shared by DumpsMaterials: <https://drive.google.com/open?id=1QS4mMPmAZdPIBnjlkBa68mmdztSH48->

The 1Z0-1072-25 dumps of DumpsMaterials include valid 1Z0-1072-25 questions PDF and customizable Oracle Cloud Infrastructure 2025 Architect Associate (1Z0-1072-25) practice tests. Our 24/7 customer support provides assistance to help 1Z0-1072-25 Dumps users solve their technical hitches during their test preparation. The 1Z0-1072-25 exam questions of DumpsMaterials come with up to 365 days of free updates and a free demo.

There are three different versions provided by our company. Every version is very convenient and practical. The three different versions of our 1Z0-1072-25 study torrent have different function. Now I am willing to show you the special function of the PDF version of 1Z0-1072-25 test torrent. If you prefer to read paper materials rather than learning on computers, the PDF version of our 1Z0-1072-25 Guide Torrent must be the best choice for you. Because the study materials on the PDF version are printable, you can download our 1Z0-1072-25 study torrent by the PDF version and print it on papers.

## Dump 1Z0-1072-25 Collection & Latest 1Z0-1072-25 Dumps Files

We also have dedicated staffs to maintain updating 1Z0-1072-25 practice test every day, and you can be sure that compared to other test materials on the market, 1Z0-1072-25 quiz guide is the most advanced. With 1Z0-1072-25 exam torrent, there will not be a situation like other students that you need to re-purchase guidance materials once the syllabus has changed. Even for some students who didn't purchase 1Z0-1072-25 Quiz guide, it is impossible to immediately know the new contents of the exam after the test outline has changed. 1Z0-1072-25 practice test not only help you save a lot of money, but also let you know the new exam trends earlier than others.

## Oracle 1Z0-1072-25 Exam Syllabus Topics:

---

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Storage: Designed for storage administrators managing enterprise data solutions, this section tests proficiency in deploying Block</li> <li>File</li> <li>Object Storage with lifecycle management, cross-region replication, and tiered storage strategies. It includes configuring volume groups, snapshots, versioning, and security controls while analyzing storage performance metrics and cost optimization techniques.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Identity and Access Management (IAM): This domain validates skills of security architects implementing granular access controls, emphasizing IAM policy creation, compartment organization, and dynamic group configuration. It covers identity domain management, network source restrictions, and tag-based access mechanisms to enforce least-privilege principles across OCI resources</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Compute: This section measures skills of cloud architects responsible for designing scalable and resilient infrastructure, covering compute instance configuration, autoscaling policies, and OS management. It evaluates understanding of OCI compute image options, infrastructure maintenance processes, and strategies for optimizing instance performance across availability domains.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Networking: Targeting network architects designing secure cloud architectures, this domain focuses on Virtual Cloud Network (VCN) implementation, including subnet design, IP address management, and routing through gateways (NAT, service, internet). It assesses expertise in VPN</li> <li>FastConnect deployment, DNS configuration, load balancer setup, and advanced tools like Network Path Analyzer for troubleshooting latency or connectivity issues.</li> </ul>

## Oracle Cloud Infrastructure 2025 Architect Associate Sample Questions (Q22-Q27):

### NEW QUESTION # 22

Which TWO are key benefits of setting up Site-to-Site VPN on Oracle Cloud Infrastructure (OCI)?

- A. When setting up Site-to-Site VPN, customers can configure it to use static or dynamic routing (BGP).
- B. When setting up Site-to-Site VPN, customers can expect bandwidth above 2 Gbps.
- C. When setting up Site-to-Site VPN, it creates a private connection that provides consistent network experience.
- D. When setting up Site-to-Site VPN, OCI provisions redundant VPN tunnels.

**Answer: A,D**

Explanation:

Setting up a Site-to-Site VPN on Oracle Cloud Infrastructure offers several key benefits related to connectivity and reliability:  
 Static or Dynamic Routing (BGP): OCI allows customers to configure Site-to-Site VPN with either static routing or dynamic routing using Border Gateway Protocol (BGP). This flexibility enables customers to choose the routing method that best suits their network configuration and requirements.

Redundant VPN Tunnels: OCI automatically provisions redundant VPN tunnels when you set up a Site-to-Site VPN. These redundant tunnels ensure high availability and fault tolerance, so if one tunnel fails, traffic can continue to flow through the other tunnel without interruption.

Bandwidth Considerations: While the VPN provides a reliable connection, it typically does not exceed 2 Gbps in bandwidth. Higher bandwidth connections usually require FastConnect.

Private Connection: The VPN does create a secure and private connection between on-premises data centers and OCI, but it does not inherently provide a consistent network experience in the way that a dedicated connection like FastConnect does.

Relevant OCI Documentation:

Site-to-Site VPN Overview

Configuring Routing for VPNs

These references detail the benefits and technical specifications of setting up Site-to-Site VPNs on OCI.

### NEW QUESTION # 23

Why is the OCI Inter-Region Latency dashboard useful for optimizing data transfer and backup strategies?

- A. It offers a current and historical view of latency snapshots.
- B. It's designed for troubleshooting latency issues within your specific applications.
- C. It provides real-time data specific to your tenancy's workloads.
- D. It focuses solely on latency within your own tenancy.

**Answer: A**

Explanation:

The OCI Inter-Region Latency dashboard is useful for optimizing data transfer and backup strategies because it provides both current and historical views of latency snapshots between OCI regions. This information helps you understand the network performance between regions over time, allowing you to optimize the placement of resources and data transfer operations.

Optimization Use: By analyzing latency data, you can make informed decisions on where to store backups and how to efficiently transfer data across regions, potentially reducing costs and improving performance.

Reference:

Oracle Cloud Infrastructure Documentation: Inter-Region Latency Dashboard

#### NEW QUESTION # 24

You enabled Cross Region Replication for the volume and selected US West (San Jose) as the destination region. What should you do to create a new volume from the volume replica?

- A. Initiate the replica.
- B. No action required. By default, the replica is available as a block volume.
- C. Trigger the replica.
- D. Activate the replica.

**Answer: B**

Explanation:

When Cross-Region Replication is enabled for a block volume in Oracle Cloud Infrastructure (OCI), the replication process automatically creates and maintains a synchronized copy of the block volume in the selected destination region (in this case, US West (San Jose)).

Replica Availability: The replicated volume is immediately available as a block volume in the destination region. You do not need to take any additional action to activate or trigger the replica.

Creating New Volumes: Since the replica is automatically available as a block volume, you can directly use it to create a new volume in the destination region without any manual intervention.

Relevant OCI Documentation:

Cross-Region Block Volume Replication

This documentation outlines how cross-region replication works and confirms that no additional steps are needed to create a new volume from a replica

#### NEW QUESTION # 25

How will moving a database instance to a different compartment impact user access?

- A. Compartments prevent resource movement.
- B. Compartments are not covered by IAM policies.
- C. Access will be revoked for all users.
- D. IAM policies are not tied to compartments.

**Answer: C**

Explanation:

In Oracle Cloud Infrastructure (OCI), when you move a database instance to a different compartment, the following impact on user access occurs:

Impact of Moving Resources: When you move a resource, like a database instance, to a different compartment, the IAM policies that grant access to that resource in the original compartment no longer apply. This effectively revokes access for users or groups unless equivalent policies are in place in the new compartment.

Restoring Access: To restore access, you would need to create new IAM policies in the destination compartment that grant the necessary permissions to the users or groups who need access.

Relevant OCI Documentation:

## Managing Compartments

### Moving Resources

These resources provide detailed steps on how compartment changes impact resource access and management.

## NEW QUESTION # 26

Which is NOT a necessary step to complete this setup for instance principals?

- **A. Generate Auth Tokens to enable instances in the dynamic group to authenticate with APIs.**
- B. Create a policy granting permissions to the dynamic group to access services in your compartment or tenancy.
- C. Create a dynamic group with matching rules to specify which instances can make API calls against services.
- D. Deploy the application and the SDK to all the instances that belong to the dynamic group.

**Answer: A**

Explanation:

Instance principals in OCI allow compute instances to directly make API calls against OCI services without requiring a user account.

To set up instance principals, the following steps are necessary:

A . Deploy the application and SDK: The application running on the instances must use the OCI SDK or CLI to make API calls.

B . Create a dynamic group: Define a dynamic group with matching rules to identify which instances can use the API permissions.

C . Create a policy: Write an IAM policy that grants the dynamic group the necessary permissions to access services.

Option D is NOT necessary because instances in a dynamic group use instance principals to authenticate and do not require Auth Tokens, which are used for user authentication with APIs.
