Our Professional-Cloud-Architect questions answers study guide is the best option for you to pass exam easily. Our experts are busy in providing the most updated content that could ensure your 100% success in Professional-Cloud-Architect actual test. The up-to-date Google exam dumps consist of latest practice questions answers and explanations. We are devoted to take appropriate steps in improving our products like Professional-Cloud-Architect Pass Guide.

Earning the Google Professional-Cloud-Architect certification is an excellent way to demonstrate your expertise and differentiate yourself in a competitive job market. Google Certified Professional - Cloud Architect (GCP) certification is recognized globally and can help you secure high-paying jobs in cloud architecture and related fields. If you are a cloud professional looking to advance your career, the GCP certification is a great investment in your future.

To be eligible for the Google Professional-Cloud-Architect Certification Exam, candidates must have at least three years of industry experience, including one year of designing and managing solutions using GCP. They should also have a strong understanding of GCP services, infrastructure, and security. Professional-Cloud-Architect exam tests the candidates' knowledge and skills in various areas, including designing and planning a GCP solution, managing and provisioning GCP resources, and optimizing GCP performance and cost.

Google Certified Professional - Cloud Architect (GCP) study guide: exam Professional-Cloud-Architect real vce collection

As you all know that practicing with the wrong preparation material will waste your valuable money and many precious study hours. So you need to choose the most proper and verified preparation material with caution. Preparation material for the Google Certified Professional - Cloud Architect (GCP) (Professional-Cloud-Architect) exam questions from ExamCost helps to break down the most difficult concepts into easy-to-understand examples. Also, you will find that all the included questions are based on the last and updated Professional-Cloud-Architect Exam Dumps version. We are sure that using Professional-Cloud-Architect Exam Questions preparation material will support you in passing the Professional-Cloud-Architect exam with confidence.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q230-Q235):

NEW QUESTION # 230

For this question, refer to the Helicopter Racing League (HRL) case study. HRL wants better prediction accuracy from their ML prediction models. They want you to use Google's AI Platform so HRL can understand and interpret the predictions. What should you do?

- **A. Use Explainable AI.**

- B. Use Vision AI.
- C. Use Google Cloud's operations suite.
- D. Use Jupyter Notebooks.

Answer: A

NEW QUESTION # 231

You are using Cloud SQL as the database backend for a large CRM deployment. You want to scale as usage increases and ensure that you don't run out of storage, maintain 75% CPU usage cores, and keep replication lag below 60 seconds. What are the correct steps to meet your requirements?

- A. 1. Enable automatic storage increase for the instance.
2. Change the instance type to a 32-core machine type to keep CPU usage below 75%.
3. Create a Stackdriver alert for replication lag, and deploy memcache to reduce load on the master.
- B. 1. Create a Stackdriver alert when storage exceeds 75%, and increase the available storage on the instance to create more space.
2. Deploy memcached to reduce CPU load.
3. Create a Stackdriver alert for replication lag, and change the instance type to a 32-core machine type to reduce replication lag.
- C. 1. Create a Stackdriver alert when storage exceeds 75%, and increase the available storage on the instance to create more space.
2. Deploy memcached to reduce CPU load.
3. Change the instance type to a 32-core machine type to reduce replication lag.
- **D. 1. Enable automatic storage increase for the instance.
2. Create a Stackdriver alert when CPU usage exceeds 75%, and change the instance type to reduce CPU usage.
3. Create a Stackdriver alert for replication lag, and shard the database to reduce replication time.**

Answer: D

NEW QUESTION # 232

A lead engineer wrote a custom tool that deploys virtual machines in the legacy data center. He wants to migrate the custom tool to the new cloud environment. You want to advocate for the adoption of Google Cloud Deployment Manager. What are two business risks of migrating to Cloud Deployment Manager? Choose 2 answers.

- A. Cloud Deployment Manager APIs could be deprecated in the future.
- **B. Cloud Deployment Manager requires a Google APIs service account to run.**
- C. Cloud Deployment Manager can be used to permanently delete cloud resources.
- D. Cloud Deployment Manager only supports automation of Google Cloud resources.
- E. Cloud Deployment Manager is unfamiliar to the company's engineers.
- **F. Cloud Deployment Manager uses Python.**

Answer: B,F

NEW QUESTION # 233

Your company has a support ticketing solution that uses App Engine Standard. The project that contains the App Engine application already has a Virtual Private Cloud (VPC) network fully connected to the company's on-premises environment through a Cloud VPN tunnel. You want to enable App Engine application to communicate with a database that is running in the company's on-premises environment. What should you do?

- A. Configure private Google access
- **B. Configure private services access**
- C. Configure serverless VPC access
- D. Configure private Google access for on-premises hosts only

Answer: B

Explanation:

Explanation

<https://cloud.google.com/appengine/docs/standard/python3/connecting-vpc>

https://cloud.google.com/appengine/docs/flexible/python/using-third-party-databases#on_premises

NEW QUESTION # 234

You are helping the QA team to roll out a new load-testing tool to test the scalability of your primary cloud services that run on Google Compute Engine with Cloud Bigtable.

Which three requirements should they include? Choose 3 answers

- **A. Create a separate Google Cloud project to use for the load-testing environment.**
- **B. Schedule the load-testing tool to regularly run against the production environment.**
- C. Ensure that the load tests validate the performance of Cloud Bigtable.
- **D. Ensure all third-party systems your services use are capable of handling high load.**
- E. Instrument the load-testing tool and the target services with detailed logging and metrics collection.
- F. Instrument the production services to record every transaction for replay by the load-testing tool.

Answer: A,B,D

Explanation:

Not E: Load testing the Bigtable is not necessary as Bigtable provisions and scales to hundreds of petabytes automatically and can smoothly handle millions of operations per second by default and it is completely Managed.

Not F: Performance testing should never be done on prod environment.

NEW QUESTION # 235

.....

According to different kinds of questionnaires based on study condition among different age groups, we have drawn a conclusion that the majority learners have the same problems to a large extent, that is low-efficiency, low-productivity, and lack of plan and periodicity.
