Wenn Sie an der Scaled Agile SAFe-RTE Zertifizierungsprüfung teilnehmen wollen, sind die SAFe-RTE dumps von ZertFragen Ihr bestes Vorbereitungsgerät. Die Prüfungsfragen können Ihnen helfen, die SAFe-RTE Prüfung mühelos zu bestehen. Und diese Prüfungsfragen sind sehr gut bewertet, mit denen Sie sich nicht um Ihre SAFe-RTE Zertifizierung sorgen. Die dumps können alle Probleme lösen, auf die Sie sich vorbereiten müssen. Und vor dem Kauf der Scaled Agile SAFe-RTE Prüfungsunterlagen können Sie das kostenlose Demo als Probe herunterladen, damit Sie wissen können, ob die Prüfungsunterlagen für Sie geeignet sind.

Die SAFe-RTE Zertifizierungsprüfung ist ein wertvolles Zeugnis für Fachleute, die Agile-Teams und Programme in großen Unternehmen führen, erleichtern und coachen. Diese Zertifizierung validiert das Wissen und die Expertise von Einzelpersonen bei der Verwaltung und Koordination der Wertbereitstellung in einer skalierten Agile-Umgebung. Wenn Sie Ihre Karriereaussichten im Agilen Projektmanagement verbessern möchten, ist die SAFe-RTE Zertifizierungsprüfung definitiv eine Überlegung wert.

SAFe-RTE Prüfungs & SAFe-RTE Testfragen

Die angemessene Bildung ist die Garantie des Erfolgs. Deshalb ist es sehr wichtig, diese Prüfung auszuwählen. Wir bieten Ihnen die neuesten und effektivsten Prüfungsfragen und Testantworten zur Scaled Agile SAFe-RTE Zertifizierung. Und Wir ZertFragen garantieren 100% Erfolg. Und der Preis ist auch günstig. Die Bezahlung bei Paypal kann Ihre Sicherheit garantieren. Wir ZertFragen bieten die besten Lernhilfe für Scaled Agile SAFe-RTE Prüfungen und auch aktualisieren immer die Prüfungsunterlagen.

Scaled Agile SAFe Release Train Engineer SAFe-RTE Prüfungsfragen mit Lösungen (Q38-Q43):

38. Frage

In addition to Innovation and Planning, what else does the IP Iteration provide time for?

- A. An opportunity to integrate and perform end-to-end testing
- **B. An estimating guard band**
- C. Building in quality and compliance
- D. Additional planned work

Antwort: B

39. Frage

A Release Train Engineer should build a relationship with which SAFe role in order to effectively assign business value to a team Program Increment (PI) Objective?

- A. Lean-Agile Leaders
- **B. Business Owners**
- C. Objective Owners
- D. Solution Managers

Antwort: B

Begründung:

The Release Train Engineer (RTE) is responsible for facilitating ART events and processes, and one of their key roles during the Program Increment (PI) planning is to assist with the assignment of business value to team PI Objectives. This is a critical activity that requires collaboration with Business Owners. According to the SAFe framework, Business Owners are a small group of stakeholders who have the primary responsibility for governance, compliance, and return on investment (ROI) for a solution developed by an Agile Release Train (ART). They are key stakeholders on the ART, who have the ultimate responsibility for the business outcomes of the train.

During PI planning, Business Owners collaborate with teams to define PI Objectives and assign business value during the PI planning process. This helps ensure that the team's objectives align with the strategic goals of the organization and that there is a shared understanding of what creates value for the business. The RTE facilitates this process and ensures that the assignment of business value is effectively communicated and understood by all parties involved¹.

For a detailed understanding, the SAFe documentation on PI Objectives elaborates on the importance of setting and communicating these objectives, as they provide a common language for communicating with business and technology stakeholders and enable the ART to assess its performance and the business value achieved¹. The collaboration between the RTE and Business Owners is essential for the alignment and trust between development and business stakeholders, which is communicated via PI objectives¹.

40. Frage

A Release Train Engineer (RTE) would like to try a new retrospective technique at the next Inspect and Adapt event. However, the RTE is unsure how to prepare for it and thinks there may be some pitfalls. How could an RTE get help?

- **A. Share and receive feedback from other RTEs in a community of practice**
- B. Post it in an internal communications forum and inspire others to try this technique as well
- C. Ask leadership to decide whether or not this technique should be used with the Agile Release Train
- D. Start a discussion with the Architects to see how they would re-design the retro-spectives

Antwort: A

Begründung:

When an RTE is considering implementing a new retrospective technique and is seeking guidance on preparation and potential pitfalls, the best course of action is to:

* Engage with a Community of Practice: RTEs can benefit from sharing their ideas and receiving feedback from peers within a community of practice. This collaborative environment allows RTEs to learn from each other's experiences and insights, which can be invaluable when trying out new techniques¹.

* Review SAFe Guidance: The RTE should review any available guidance on retrospective techniques provided by SAFe to ensure

alignment with the framework's principles and practices¹.

* Prepare for Implementation: Before introducing the new technique, the RTE should prepare adequately by understanding the process, required materials, and expected outcomes. This preparation helps in anticipating challenges and planning how to address them.

* Pilot the Technique: If possible, the RTE may choose to pilot the new technique with a smaller group or a single team to evaluate its effectiveness and make any necessary adjustments before rolling it out to the entire Agile Release Train.

* Reflect and Adapt: After implementing the new technique, the RTE should reflect on its effectiveness and gather feedback from participants to continuously improve the process for future Inspect and Adapt events.

By following these steps, an RTE can confidently approach the introduction of a new retrospective technique, ensuring it adds value to the Inspect and Adapt event and supports the continuous improvement of the Agile Release Train.

41. Frage

Why is it important for the Release Train Engineer (RTE) to understand Tuckman's group dynamic stages?

- A. The Tuckman four stages should be reflected in the design of the ART Kanban
- **B. An ART is a team of teams and will likely progress through the Tuckman stages**
- C. Tuckman helps RTEs to better understand Team and ART topologies
- D. The Tuckman dynamic nature of the stages requires that we assume variability and preserve options

Antwort: B

Begründung:

Understanding Tuckman's group dynamic stages is important for a Release Train Engineer (RTE) because an Agile Release Train (ART) is essentially a team of teams, and like any team, it is likely to progress through Tuckman's stages of group development: forming, storming, norming, and performing¹.

Here's a detailed explanation of how each stage applies to an ART:

*Forming: In this initial stage, teams come together and start to understand their objectives and boundaries.

The RTE plays a vital role in guiding the ART through this stage by helping establish the vision, mission, and objectives of the train.

*Storming: As teams begin working together, they may encounter conflicts and challenges. The RTE can help navigate these by facilitating communication and conflict resolution, ensuring that all teams are aligned and focused on the ART's goals.

*Norming: During this stage, teams start to resolve their differences, establish processes, and begin to work more effectively together. The RTE supports this by fostering a culture of collaboration and continuous improvement.

*Performing: In the final stage, teams operate efficiently and effectively toward achieving the ART's goals.

The RTE's role here is to ensure that this high performance is sustained and that the teams continue to innovate and improve.

By understanding these stages, the RTE can better facilitate the ART's journey through them, helping to ensure that the teams within the ART collaborate effectively, resolve conflicts, and ultimately deliver value more predictably. This understanding also helps the RTE to anticipate the challenges that may arise at each stage and to be better prepared to support the ART in navigating them. The knowledge of Tuckman's model equips the RTE with the insights needed to lead the ART through its developmental journey, contributing to the overall success of the train.

42. Frage

What is the primary purpose of PO sync?

- **A. To assess progress of the Program Increment and adjust scope and priority as needed**
- B. To build objectives for the Program Increment
- C. To align with the scrum of scrums participants on the status of the Program Increment

Antwort: A

Begründung:

The PO Sync is a regularly scheduled event for Product Owners (POs) and product management (PMs) with several important purposes. One of the primary purposes is to provide visibility into how well the Agile Release Train (ART) is progressing towards its Program Increment (PI) objectives. This involves assessing any scope changes to work and adjusting scope and priority as needed. The PO Sync enables the RTE, PMs, and POs to inspect and adapt the plan for the current PI, ensuring that the ART is on track to achieve its objectives and making necessary adjustments to the Program Backlog¹.

43. Frage

.....

Dynamischen Welt von heute lohnt es sich, etwas für das berufliche Weiterkommen zu tun. Angesichts des Fachkräftemangels in vielen Branchen haben Sie mit einer Scaled Agile SAFe-RTE Zertifizierung mehr Kontrolle über Ihren eigenen Werdegang und damit bessere Aufstiegschancen.
