**Pass Guaranteed Quiz 2026 Reliable SPLK-3002: Splunk IT Service Intelligence Certified Admin Test Topics Pdf**

Knowledge is a great impetus for the progress of human civilization. In the century today, we have to admit that unemployment is getting worse. Many jobs have been replaced by intelligent robots, so you have to learn practical knowledge, such as our Splunk IT Service Intelligence Certified Admin exam dumps, it can meet the needs of users. With the help of our SPLK-3002 test material, users will learn the knowledge necessary to obtain the Splunk certificate and be competitive in the job market and gain a firm foothold in the workplace. Our SPLK-3002 Quiz guide' reputation for compiling has created a sound base for our beautiful future business. We are clearly concentrated on the international high-end market, thereby committing our resources to the specific product requirements of this key market sector, as long as cater to all the users who wants to get the test Splunk certification.

Splunk SPLK-3002, also known as the Splunk IT Service Intelligence Certified Admin exam, is a certification test designed for professionals who want to become proficient in using Splunk IT Service Intelligence (ITSI) to monitor, analyze, and troubleshoot IT environments. SPLK-3002 Exam is an advanced-level certification that covers the most important aspects of ITSI, including setting up and configuring ITSI, creating service models, and using advanced analytics to detect and resolve IT issues.

## Splunk IT Service Intelligence Certified Admin Sample Questions (Q97-Q102):

### NEW QUESTION # 97

Which of the following describes a way to delete multiple duplicate entities in ITSI?

- A. Via the entity lister page.
- **B. All of the above.**
- C. Via a search using the | deleteentity command.
- D. Via a CSV upload.

**Answer: B**

Explanation:

D is the correct answer because ITSI provides multiple ways to delete multiple duplicate entities. You can use a CSV upload to overwrite existing entities with new or updated information, or delete them by setting the action field to delete. You can also use the entity lister page to select multiple entities and delete them in bulk. Alternatively, you can use a search command called | deleteentity to delete entities that match certain criteria. Reference: Create and update entities using a CSV file in ITSI, Delete entities in bulk in ITSI, Delete entities using the | deleteentity command in ITSI

### NEW QUESTION # 98

What happens when an anomaly is detected?

- **A. An anomaly alert will appear as a notable event in Episode Review.**
- B. A SNMP trap will be sent.
- C. An anomaly alert will appear in core splunk, in index=main.
- D. A separate correlation search needs to be created in order to see it.

**Answer: A**

Explanation:

When an anomaly is detected in Splunk IT Service Intelligence (ITSI), it typically generates a notable event that can be reviewed and managed in the Episode Review dashboard. The Episode Review is part of ITSI's Event Analytics framework and serves as a centralized location for reviewing, annotating, and managing notable events, including those generated by anomaly detection. This process enables IT operators and analysts to efficiently identify, prioritize, and respond to potential issues highlighted by the anomaly alerts. The integration of anomaly alerts into the Episode Review dashboard streamlines the workflow for managing and investigating these alerts within the broader context of IT service management and operational intelligence.

### NEW QUESTION # 99

Which of the following is a problem requiring correction in ITSI?

- A. Two or more entities with the same service ID.
- **B. Two or more entities with the same value in a single alias field.**
- C. Two or more entities with the same entity ID.
- D. Two or more entities with the same entity key value in any info field.

**Answer: B**

Explanation:

In Splunk IT Service Intelligence (ITSI), entities represent infrastructure components, applications, or other elements that are monitored. Each entity is uniquely identified by its entity ID, and entities can be associated with one or more services through the concept of aliases. A problem arises when two or more entities have the same value in a single alias field because aliases are used to match events to entities in ITSI. If multiple entities share the same alias value, ITSI might incorrectly associate data with the wrong entity, leading to inaccurate monitoring and analytics. This scenario requires correction to ensure that each alias uniquely identifies a single entity, thereby maintaining the integrity of the monitoring and analysis process within ITSI. The uniqueness of service IDs, entity IDs, and entity key values in info fields is also important but does not typically present the same level of issue as duplicate values in an alias field.

#### NEW QUESTION # 100

Which index contains ITSI Episodes?

- A. `itsi_tracked_alerts`
- B. `itsi_notable_archive`
- C. `itsi_summary`
- D. `itsi_grouped_alerts`

**Answer: D**

Explanation:

Reference:

B is the correct answer because ITSI episodes are stored in the `itsi_grouped_alerts` index. This index contains notable events that have been grouped together based on predefined aggregation policies. Episodes help you reduce alert noise and focus on resolving incidents faster. Reference: [Overview of episodes in ITSI]

#### NEW QUESTION # 101

Which of the following is a good use case regarding defining entities for a service?

- A. All of the entities have the same identifying field name.
- B. **Automatically associate entities to services using multiple entity aliases.**
- C. KPI total values are aggregated from multiple different category values in the source events.
- D. Being able to split a CPU usage KPI by host name.

**Answer: B**

Explanation:

Explanation

Define entities before creating services. When you configure a service, you can specify entity matching rules based on entity aliases that automatically add the entities to your service.
