E-S4CPE-2405 New Dumps Questions | Valid E-S4CPE-2405 Test Questions

P.S. Free 2026 SAP E-S4CPE-2405 dumps are available on Google Drive shared by PrepAwayExam: https://drive.google.com/open?id=1CDCx36gnQaGbL4Bg0pq87QFtSv651clD

Creativity is coming from the passion and love of knowledge. Every day there are many different new things turning up. So a wise and diligent person should absorb more knowledge when they are still young. At present, our E-S4CPE-2405 study prep has gained wide popularity among different age groups. Most of the real exam questions come from the adaption of our E-S4CPE-2405 test question. In fact, we get used to investigate the real test every year. The similarity between our study materials and official test is very amazing. In a word, your satisfaction and demands of the E-S4CPE-2405 Exam braindump is our long lasting pursuit. Hesitation will not generate good results. Action always speaks louder than words. Our E-S4CPE-2405 study prep will not disappoint you. So just click to pay for it.

SAP E-S4CPE-2405 Exam Syllabus Topics:

Topic	Details
Topic 1	• System Landscapes and Identity Access Management: This section of the exam measures skills of system administrators and focuses on designing and managing SAP system landscapes while ensuring secure and efficient identity access management. It includes concepts related to system environments, user authentication, and authorization controls.
Topic 2	• Configuration and the SAP Fiori Launchpad: This section of the exam measures skills of application consultants and covers configuring SAP solutions to meet business needs, along with setting up and managing the SAP Fiori Launchpad. It also touches on customizing the user interface for an optimal and user-friendly experience.
Topic 3	• Implementing with a Cloud Mindset, Building the Team, and Conducting Fit-to-Standard Workshops: This section of the exam measures skills of project managers and emphasizes the importance of adopting a cloud-first approach when implementing SAP solutions. It also includes building the right implementation team and running fit-to-standard workshops to align system configuration with best practices and standard business processes.

Pass Guaranteed Quiz 2026 Professional E-S4CPE-2405: SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition New Dumps Questions

The customers can immediately start using the SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition (E-S4CPE-2405) exam dumps of PrepAwayExam after buying it. In this way, one can save time and instantly embark on the journey of E-S4CPE-2405 test preparation. 24/7 customer service is also available at PrepAwayExam. Feel free to reach our customer support team if you have any questions about our E-S4CPE-2405 Exam Preparation material.

SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition Sample Questions (Q43-Q48):

NEW QUESTION # 43
How should an implementation consultant customize SAP Best Practices business processes?

- A. Use SAP Cloud ALM to edit the process
- B. Use SAP Signavio Process Manager to edit the process
- C. Make edits to the original process
- D. Make a copy of the original process and edit the copy

Answer: D

NEW QUESTION # 44
Which of the following are formal tests, and therefore must be documented? Note: There are 2 correct answers to this question.

- A. Unit tests
- B. Business process tests
- C. String tests
- D. Integration tests

Answer: C,D

Explanation:
Formal tests in the context of SAP S/4HANA Cloud Private Edition implementation (e.g., via SAP Activate Methodology) are structured, documented tests conducted to validate system functionality and ensure quality.
These are typically managed in tools like SAP Cloud ALM. Let's analyze which tests are considered formal and require documentation:
* A. Unit tests: This is incorrect. Unit tests are informal, developer-level tests to verify individual components (e.g., a custom program or configuration). In SAP Activate, they are not classified as formal tests requiring centralized documentation, though they are important during development.
Documentation is typically ad-hoc and not mandated in tools like SAP Cloud ALM.
* B. Integration tests: This is correct. Integration tests validate the end-to-end flow across multiple components, applications, or systems (e.g., SAP S/4HANA Cloud Private Edition with SAP SuccessFactors). As formal tests, they are documented in SAP Cloud ALM (e.g., via the Test Preparation app) to ensure integration points work as expected during the Realize phase.
* C. String tests: This is also correct. String tests are formal tests that verify a sequence of process steps within a single business process (e.g., procure-to-pay steps like purchase requisition to invoice). They are documented as part of the testing strategy in SAP Activate to confirm process continuity and are considered a formal testing type in SAP Cloud ALM.
* D. Business process tests: This is incorrect. While business process testing is critical, the term "business process tests" is not a distinct formal test category in SAP Activate. It's a broader concept encompassing string tests, integration tests, and user acceptance tests (UAT). String and integration tests are the specific formal types requiring documentation, not the generic "business process tests." In summary,Integration testsandString testsare formal tests that must be documented in SAP S/4HANA Cloud Private Edition implementations.

NEW QUESTION # 45
Which of the following are key-user in-app extensions that can be completed in SAP S/4HANA Cloud Private Edition? Note: There are 2 correct answers to this question.

- A. Create a custom application UI with UI adaptation at runtime.

- B. Create a custom object with the Business Object Processing Framework (BOPF).
- C. Define a core data services (CDS) view with the ABAP development tools for Eclipse.
- D. Define a custom table in the SAP Fiori app "Custom Business Objects."

Answer: A,D

Explanation:
Key-user in-app extensibility in SAP S/4HANA Cloud Private Edition allows users to make specific adaptations and extensions directly within the system.
Option A: Define a custom table in the SAP Fiori app "Custom Business Objects." This option is correct. The "Custom Business Objects" app enables key users to create custom business objects, which include defining custom tables, without the need for developer intervention.
Option B: Create a custom object with the Business Object Processing Framework (BOPF).
This option is incorrect. Creating custom objects with BOPF requires developer skills and access to development tools, which goes beyond key-user in-app extensibility.
Option C: Define a core data services (CDS) view with the ABAP development tools for Eclipse.
This option is incorrect. Defining CDS views using ABAP development tools is a developer task and is not part of key-user in-app extensibility.
Option D: Create a custom application UI with UI adaptation at runtime.
This option is correct. UI adaptation at runtime allows key users to modify the user interface of applications, such as adding or hiding fields, without coding.
In summary, key-user in-app extensibility in SAP S/4HANA Cloud Private Edition includes defining custom tables using the "Custom Business Objects" app and creating custom application UIs through UI adaptation at runtime.

NEW QUESTION # 46
Which of the following are captured in a completed Digital Discovery Assessment? Note: There are2 correct answers to this question.

- A. Business role requirements
- B. Known integration requirements
- C. Target customer go-live date
- D. SAP Fiori application extensions

Answer: B,C

Explanation:
The Digital Discovery Assessment (DDA) is a tool used during the sales cycle (Discover phase of the SAP Activate Methodology) to evaluate a customer's requirements and recommend the best SAP S/4HANA Cloud deployment option-Public or Private Edition. For SAP S/4HANA Cloud Private Edition, the DDA captures detailed information to scope the implementation project. Let's analyze the options:
* A. Business role requirements: While business roles (e.g., authorizations, user roles) are critical for implementation, they are typically defined and configured during the Prepare and Explore phases of the SAP Activate Methodology, not captured in the DDA. The DDA focuses on high-level requirements rather than granular role-specific details. Thus, this is not a correct answer.
* B. Known integration requirements: This is correct. The DDA, especially in the Detailed Discovery phase, collects information about integrations with other SAP Cloud solutions (e.g., SAP SuccessFactors, SAP Ariba) or non-SAP systems that the customer already has or plans to adopt. This is crucial for Private Edition implementations, which often involve complex landscapes requiring extensive integration. SAP documentation confirms that identifying known integration requirements is a key output of the DDA.
* C. Target customer go-live date: This is also correct. The DDA includes project-specific details such as the target go-live date, which helps define the timeline and scope of the implementation. This information is entered during the Detailed Discovery to align expectations and plan resources effectively, as noted in SAP's learning materials.
* D. SAP Fiori application extensions: This is incorrect. While SAP Fiori is integral to SAP S/4HANA Cloud Private Edition for its user interface, the DDA does not specifically capture details about Fiori application extensions. Extensions are typically addressed later in the implementation process (e.g., during the Realize phase) using tools like SAP Business Technology Platform (BTP). The DDA focuses on business processes, integrations, and project parameters rather than UI customizations.
In conclusion, the DDA for SAP S/4HANA Cloud Private Edition capturesB(known integration requirements) andC(target customer go-live date) as key elements to inform the deployment recommendation and project scoping.

NEW QUESTION # 47
Through which tools can you launch the Cloud Integration Automation service? Note: There are 2 correct answers to this question.

- A. SAP for Me
- B. SAP Business Accelerator Hub
- C. SAP Cloud ALM
- D. SAP Solution Manager

Answer: A,C

Explanation:
The Cloud Integration Automation service facilitates the integration of SAP cloud solutions. It can be launched through the following tools:
Option A: SAP for Me
This option is correct. SAP for Me is a customer portal that provides access to various SAP services, including the Cloud Integration Automation service.
Option B: SAP Solution Manager
This option is incorrect. SAP Solution Manager is primarily used for application lifecycle management and does not directly launch the Cloud Integration Automation service.
Option C: SAP Business Accelerator Hub
This option is incorrect. SAP Business Accelerator Hub is a repository for APIs and does not provide access to the Cloud Integration Automation service.
Option D: SAP Cloud ALM
This option is correct. SAP Cloud ALM is an application lifecycle management tool for cloud solutions and provides access to the Cloud Integration Automation service.
In summary, the Cloud Integration Automation service can be launched throughSAP for Meand **

NEW QUESTION # 48
.....

It is no longer an accident for you to pass E-S4CPE-2405 exam after you have use our E-S4CPE-2405 exam software. You will have thorough training and exercises from our huge question dumps, and master every question from the detailed answer analysis. The exam software with such guarantees will clear your worries about E-S4CPE-2405 Exam.
