## Reliable NCP-MCA Study Materials & New NCP-MCA Exam Discount

As the authoritative provider of NCP-MCA actual exam, we always pursue high pass rate compared with our peers to gain more attention from those potential customers. We guarantee that if you follow the guidance of our NCP-MCA learning materials, you will pass the exam without a doubt and get a certificate. Our NCP-MCA Exam Practice is carefully compiled after many years of practical effort and is adaptable to the needs of the NCP-MCA exam.

**Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q94-Q99):**

#### NEW QUESTION # 94

What is the correct syntax for using a macro within a Calm blueprint?

- A. {{calm.object}}
- B. @@{calm.object}(@@
- C. \$\_calm.object\_\$
- D. %calm.object%

**Answer: B**

#### NEW QUESTION # 95

What component of Approval Policies sets the criteria for an approval to be triggered?

- A. Conditions
- B. Actions
- C. Jobs
- D. Alerts

**Answer: A**

Explanation:

In Approval Policies within Nutanix Calm, "Conditions" are used to set the criteria for an approval to be triggered. Conditions define the specific circumstances under which an approval process should be initiated, such as specific actions or threshold limits.

References:

- \* Nutanix Calm documentation on Approval Policies.
- \* Nutanix Best Practices for Defining Conditions.

#### NEW QUESTION # 96

A developer is building and testing a new Blueprint to deploy a Windows Server VM on AHV. During one of the test runs, the application build fails.

The developer asks an administrator to investigate the failure. After careful review, the administrator finds this error message on a task that executes a PowerShell script.

What is the cause of this error message?

- A. CredSSP has not been enabled on the Windows Operating System
- B. Self-Service cannot communicate with the newly provisioned VM.
- C. The version of PowerShell is incorrect.
- D. The PowerShell script has an error in the code and cannot be executed as designed.

**Answer: A**

Explanation:

The error message "A specified logon session does not exist. It may already have been terminated" is often caused by the lack of CredSSP (Credential Security Support Provider) being enabled on the Windows Operating System. CredSSP is necessary for certain remote operations, including executing PowerShell scripts remotely.

Reference:

Microsoft documentation on Enabling CredSSP.

Nutanix documentation on Troubleshooting PowerShell Scripts.

#### NEW QUESTION # 97

A developer is building a Blueprint that deploys a Redhat Enterprise Linux VM on vSphere. During the testing of the Blueprint to prepare it for users, it is discovered that the App deployment fails with the error.

What is the cause of this error?

- A. Cloud-init is not correctly formatted.

- B. The rhel7 template is unavailable for the VM deployment.
- C. vCenter Server cannot be reached.
- D. **Open-vm-tools is not installed or not started.**

**Answer: D**

Explanation:

The error message indicates that customization of the guest operating system is not supported. This issue often arises because open-vm-tools is not installed or not running on the Redhat Enterprise Linux VM.

open-vm-tools is necessary for vSphere to perform guest customization tasks, such as setting the hostname, IP configuration, and other initialization tasks.

References:

- \* Nutanix documentation on Guest Customization Requirements.
- \* VMware documentation on [Installing Open VM Tools](#).

**NEW QUESTION # 98**

An Application team has provided an administrator the following high level requirements for infrastructure they require:

5 Application VMs

2 Database VMs

2 Web VMs

Which two pieces of information are needed, at a minimum, to effectively automate the scaling of the environment? (Choose two.)

- A. **Steady state resource utilization**
- B. **Expected resource utilization under load**
- C. SLA uptime of the application
- D. If the application needs to be highly available

**Answer: A,B**

Explanation:

To effectively automate the scaling of the environment, the administrator needs to know the steady state resource utilization and the expected resource utilization under load of the application, database, and web VMs. These two pieces of information will help the administrator to define the scaling policies, thresholds, and actions for the blueprint service that deploys the infrastructure. The administrator can use the Self-Service feature of Nutanix Multicloud Automation to create a blueprint service that can scale up or down based on the resource utilization metrics. The administrator can also use the Runbook feature to automate the scaling actions using scripts or APIs.

The other options are incorrect because:

\* SLA uptime of the application: This is not a piece of information that is needed to automate the scaling of the environment. The SLA uptime of the application is a performance indicator that measures the availability and reliability of the application. The administrator can use the X-Play feature of Nutanix Multicloud Automation to create event-driven playbooks that can trigger actions based on alerts or schedules to ensure the SLA uptime of the application.

\* If the application needs to be highly available: This is not a piece of information that is needed to automate the scaling of the environment. The high availability of the application is a design consideration that affects the architecture and configuration of the infrastructure and the application. The administrator can use the Projects feature of Nutanix Multicloud Automation to create projects that can define the availability domains, networks, and storage for the infrastructure and the application.
