

# Free PDF Quiz Salesforce - MuleSoft-Integration-Associate Perfect Exam Cram

What's more, part of that PassReview MuleSoft-Integration-Associate dumps now are free: <https://drive.google.com/open?id=1VYEZga1FtNhwANpFcaZ3yKnrsL5e-BkH>

PassReview is a convenient website to provide training resources for MuleSoft-Integration-Associate professionals to participate in the certification exam. PassReview have different training methods and training courses for different candidates. With these PassReview's targeted training, the candidates can pass the exam much easier. A lot of people who participate in the MuleSoft-Integration-Associate professional certification exam was to use PassReview's practice questions and answers to pass the exam, so PassReview got a high reputation in the MuleSoft-Integration-Associate industry.

How far is the word from the deed? If you are a man of strong will, victory is at hand. Since you want to pass Salesforce MuleSoft-Integration-Associate Exam, you must get the Salesforce MuleSoft-Integration-Associate certification. PassReview provide you with the latest certification training information and the most accurate tests answers. Real questions and answers can make your dream come true.

## Salesforce MuleSoft-Integration-Associate Exam Registration, MuleSoft-Integration-Associate Exam Guide Materials

This allows candidates to choose the format that best suits their learning style and preference, ensuring a seamless and effective exam preparation experience. By offering tailored solutions to meet individual needs, PassReview has established itself as a trusted provider of top-quality Salesforce Certified MuleSoft Integration Associate Exam (MuleSoft-Integration-Associate) exam preparation material.

## Salesforce Certified MuleSoft Integration Associate Exam Sample Questions (Q34-Q39):

### NEW QUESTION # 34

An API client makes an HTTP request to an API gateway with an Accept header containing the value "application/json"

What is a valid HTTP response payload for this request in the client's requested data format?

- A. <status>healthy</status>
- B. status: healthy
- C. status('healthy')
- D. {"status": "healthy"}

**Answer: D**

Explanation:

When an API client makes an HTTP request with an Accept header containing the value "application/json", the API server should respond with a payload formatted as JSON. Here's a detailed explanation:

\* Accept Header:

\* Purpose: The Accept header indicates the media type(s) that the client is willing to receive from the server.

- \* Value "application/json": Specifies that the client expects a response in JSON format.
- \* Valid JSON Response:
- \* Format: JSON (JavaScript Object Notation) is a lightweight data interchange format that uses key-value pairs.
- \* Example: A valid JSON response for the requested format would be {"status": "healthy"}.
- \* Key: "status"
- \* Value: "healthy"

#### References

- \* JSON Standard: JSON.org
- \* HTTP Headers: MDN HTTP Headers

### NEW QUESTION # 35

According to MuleSoft a synchronous invocation of a RESTful API using HTTP to get an individual customer record from a single system is an example of which system integration interaction pattern?

- A. Request-Reply
- B. Batch
- C. Multicast
- D. One-way

**Answer: A**

#### Explanation:

In system integration, different interaction patterns are used depending on the communication requirements between systems. For a synchronous invocation of a RESTful API using HTTP to get an individual customer record from a single system, the Request-Reply pattern is used. Here's a detailed explanation:

\* Request-Reply Pattern:

\* Definition: This pattern involves a client sending a request to a server and waiting for a reply.

The communication is synchronous, meaning the client waits for the server to process the request and send back the response.

\* Typical Use Case: It is used when immediate feedback is required from the server, such as retrieving a specific customer record.

\* RESTful API and HTTP:

\* Synchronous Communication: HTTP is inherently synchronous, making it suitable for Request-Reply interactions where the client expects an immediate response.

\* Data Retrieval: Commonly used for GET requests in RESTful APIs to retrieve data from a server.

\* Example:

\* Scenario: A client application requests customer details by making a GET request to a RESTful API endpoint. The server processes the request and returns the customer record.

- \* REST API Design: Request-Reply Pattern

### NEW QUESTION # 36

According to MuleSoft which principle is common to both Service Oriented Architecture (SOA) and API-led connectivity approaches?

- A. Service interdependence
- B. Service centralization
- C. Service statefulness
- D. Service reusability

**Answer: D**

#### Explanation:

Both Service-Oriented Architecture (SOA) and API-led connectivity emphasize the principle of service reusability. Here's a detailed explanation:

\* Service Reusability:

\* Definition: Service reusability is the principle where services are designed to be reusable across different applications and use cases.

\* SOA: In SOA, services are modular components that can be reused in various business processes, reducing redundancy and promoting efficient service composition.

\* API-led Connectivity: This approach also stresses creating reusable APIs (System APIs, Process APIs, Experience APIs) that can be leveraged across multiple projects and applications.

\* Benefits:

\* Efficiency: Reduces development time and effort by reusing existing services.

\* Consistency: Ensures consistency in business logic and data access across different applications.

\* Scalability: Facilitates scaling by using standardized and reusable services/APIs.

\* MuleSoft Documentation: SOA vs. API-led Connectivity

\* Service Reusability: Principles of Service Reusability

### NEW QUESTION # 37

CloudHub is an example of which cloud computing service model?

- A. Platform as a Service (PaaS)
- B. Software as a Service (SaaS)
- C. Monitoring as a Service (MaaS)
- D. Infrastructure as a Service (IaaS)

**Answer: A**

Explanation:

CloudHub is MuleSoft's integration platform as a service (iPaaS) offering. It provides a platform for deploying and managing integration applications in the cloud. Here's a detailed explanation:

\* Platform as a Service (PaaS):

\* Definition: PaaS provides a cloud-based environment with everything required to support the complete lifecycle of building and deploying web applications and services without the complexity of managing the underlying hardware and software layers.

\* CloudHub Features:

\* Deployment: Simplifies the deployment of Mule applications to the cloud.

\* Management: Provides tools for managing application performance, scaling, and monitoring.

\* Connectivity: Offers out-of-the-box connectors and integration capabilities for various systems and services.

\* Benefits:

\* Scalability: Automatically scales applications based on demand.

\* Availability: Ensures high availability and reliability with built-in disaster recovery and failover capabilities.

\* Security: Provides robust security features to protect data and applications.

\* MuleSoft Documentation: CloudHub

\* Cloud Computing Models: PaaS Overview

### NEW QUESTION # 38

An organization needs to procure an enterprise software system to increase cross-selling opportunities and better track prospect data.

Which category of enterprise software has these core capabilities, when used for its typical and intended purpose?

- A. IT Service Management (ITSM)
- B. Supply Chain Management (SCM)
- C. Customer Relationship Management (CRM)
- D. Business-to-Business (B2B)

**Answer: C**

Explanation:

Customer Relationship Management (CRM) systems are designed to manage an organization's interactions with current and potential customers. Here's a detailed explanation:

\* Core Capabilities:

\* Cross-Selling Opportunities: CRM systems track customer interactions, preferences, and purchasing history, helping businesses identify opportunities for cross-selling and upselling.

\* Prospect Data Management: CRM systems manage prospect information, track leads, and nurture relationships through the sales funnel.

\* Typical Use:

- \* Sales Management: Helps sales teams manage and analyze customer interactions and data throughout the customer lifecycle.
- \* Marketing Automation: Assists in automating marketing campaigns, segmenting customer lists, and tracking campaign effectiveness.
- \* Customer Service: Provides tools for managing customer support cases, improving customer satisfaction, and retaining customers.
