

High Hit Rate Exam 1Z0-1151-25 Material & Passing 1Z0-1151-25 Exam is No More a Challenging Task

BTW, DOWNLOAD part of Lead2Passed 1Z0-1151-25 dumps from Cloud Storage: <https://drive.google.com/open?id=1q-x9SSFErJfcczH6UAdWyHUG31K5Yh-B>

Lead2Passed makes your 1Z0-1151-25 exam preparation easy with its various quality features. Our 1Z0-1151-25 exam braindumps come with 100% passing and refund guarantee. Lead2Passed is dedicated to your accomplishment, hence assures you successful in 1Z0-1151-25 Certification exam on the first try. If for any reason, a candidate fails in 1Z0-1151-25 exam then he will be refunded his money after the refund process. Also, we offer 1 year free updates to our 1Z0-1151-25 Exam esteemed user, these updates are applicable to your account right from the date of purchase. 24/7 customer support is favorable to candidates who can email us if they find any ambiguity in the 1Z0-1151-25 exam dumps, our support will merely reply to your all 1Z0-1151-25 exam product related queries.

Oracle 1Z0-1151-25 Exam Syllabus Topics:

| Topic | Details |
|---------|--|
| Topic 1 | <ul style="list-style-type: none">Implement Oracle Database@Google Cloud: This section measures the proficiency of Cloud Database Engineers in utilizing Oracle Database@Google Cloud. It explores the architecture and operational framework for running Oracle databases on Google Cloud. Candidates will learn about onboarding procedures, provisioning resources, and managing database services effectively to optimize performance and availability in a Google Cloud-integrated multi-cloud ecosystem. |

| | |
|---------|---|
| Topic 2 | <ul style="list-style-type: none"> • Implement Oracle Database@Azure: This section tests the expertise of Database Solutions Architects in deploying and managing Oracle Database@Azure. It covers the architectural components and onboarding processes required for provisioning databases in Azure while maintaining Oracle's advanced database capabilities. Candidates will also focus on configuring high availability and disaster recovery strategies to ensure business continuity and data resilience in a multi-cloud setup. |
| Topic 3 | <ul style="list-style-type: none"> • Core OCI Services Overview: This section evaluates the knowledge of Identity and Database Administrators in managing OCI's core services for multi-cloud integration. It covers the implementation of identity federation between OCI Identity Domains and external identity providers, ensuring secure authentication across multiple cloud environments. Candidates will also gain expertise in configuring Virtual Cloud Network (VCN) components and administering OCI database services, including Base Databases, Autonomous Databases, and HeatWave, to support scalable multi-cloud deployments. |
| Topic 4 | <ul style="list-style-type: none"> • Introduction to Multicloud: This section of the exam measures the skills of Cloud Architects in understanding multicloud environments and their benefits. It covers the reasons organizations adopt multi-cloud strategies, including flexibility, cost optimization, and risk management. Candidates will learn about common multicloud use cases and how they are implemented in Oracle Cloud Infrastructure (OCI) to enhance interoperability and performance. |
| Topic 5 | <ul style="list-style-type: none"> • Configure Multicloud Connection Options: This section assesses the abilities of Network Engineers in configuring connectivity solutions for OCI multi-cloud environments. It includes setting up secure networking options such as Site-to-Site VPN and FastConnect for seamless cloud integration. Candidates will also learn how to implement Oracle Interconnect services for establishing direct, high-performance connections between OCI and third-party cloud providers like Microsoft Azure and Google Cloud. |

Reliable and Guarantee Refund of Oracle 1Z0-1151-25 Practice Test According to Terms and Conditions

More qualified certification for our future employment has the effect to be reckoned with, only to have enough qualification certifications to prove their ability, can we win over rivals in the social competition. Our 1Z0-1151-25 Exam Guide is suitable for everyone whether you are a business man or a student, because you just need 20-30 hours to practice, then you can attend to your exam. There is no doubt that you can get a great grade. If you follow our learning pace, you will get unexpected surprises.

Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Sample Questions (Q54-Q59):

NEW QUESTION # 54

What is the purpose of federating the Azure tenant's Microsoft Entra ID with an OCI identity domain?

- **A. To allow Azure users to log in to the OCI Console using the same Azure credentials used for Azure**
- B. To enable bi-directional communication between Azure and OCI
- C. To specify an Azure Virtual Network (VNet) in Azure during provisioning
- D. To specify an Azure Virtual Network (VNet) in Azure during provisioning

Answer: A

Explanation:

Federating Microsoft Entra ID (formerly Azure AD) with an OCI identity domain enables single sign-on (SSO), allowing Azure users to access the OCI Console with their existing Azure credentials. This enhances user experience and security in a multicloud setup. Options B and C (repeated in the original) relate to networking, not identity, and Option A is vague and incorrect. OCI's federation documentation outlines this SSO purpose clearly.

NEW QUESTION # 55

What is required to configure Oracle Interconnect for Google Cloud for ABC Private Limited?

- A. Integration with Microsoft Active Directory
- B. Direct Internet connection
- **C. Virtual Circuits on OCI and Partner Interconnects on GCP**
- D. A public subnet on both OCI and GCP

Answer: C

Explanation:

Oracle Interconnect for Google Cloud relies on establishing dedicated, private connections between Oracle Cloud Infrastructure (OCI) and Google Cloud Platform (GCP). This is achieved through:

Virtual Circuits on OCI: Oracle FastConnect provides virtual circuits for establishing private connections to other networks, including other cloud providers. This is the OCI side of the connection.

Partner Interconnects on GCP: On the Google Cloud side, Partner Interconnect provides connectivity to Google's network through a supported service provider. This is the GCP side of the connection.

These two components work together to create the end-to-end private connection between OCI and GCP.

Here's why the other options are incorrect:

A). Integration with Microsoft Active Directory: Microsoft Active Directory is relevant for Microsoft Azure environments, not Google Cloud.

B). A public subnet on both OCI and GCP: While public subnets might be used for other purposes, the core of the interconnect relies on private connections established through FastConnect and Partner Interconnect, not public internet connectivity.

C). Direct Internet connection: A direct internet connection does not provide the dedicated bandwidth, low latency, and enhanced security that a private interconnect offers. Oracle Interconnect is specifically designed to avoid using the public internet for this connection.

NEW QUESTION # 56

When setting up the Azure side of the Interconnect connection, which Azure resource is required to connect to the Oracle virtual circuit?

- A. Azure VPN Gateway
- B. Azure Virtual Network Gateway
- **C. Azure ExpressRoute circuit**
- D. Azure Load Balancer

Answer: C

Explanation:

An Azure ExpressRoute circuit represents the logical connection between your on-premises infrastructure (or, in this case, the Oracle FastConnect connection) and the Microsoft Azure cloud. It's the core component of the ExpressRoute service.

Here's why the other options are incorrect:

b). Azure VPN Gateway: VPN Gateways are used for creating secure connections over the public internet (IPsec VPNs). Oracle Interconnect for Azure uses a dedicated private connection, not a VPN over the internet.

c). Azure Virtual Network Gateway: While a Virtual Network Gateway is a broader term that includes both VPN Gateways and ExpressRoute Gateways, it's not specific enough. You need the ExpressRoute Gateway specifically to connect to an ExpressRoute circuit.

d). Azure Load Balancer: Load Balancers distribute traffic across multiple virtual machines or services. They are not involved in establishing the connectivity between Azure and Oracle Cloud Infrastructure.

NEW QUESTION # 57

What does Oracle Base Database Service use in Oracle Cloud Infrastructure to provide high availability and disaster recovery?

- **A. Availability domains and fault domains**
- B. Geography
- C. Availability set
- D. Availability zone

Answer: A

Explanation:

The Oracle Base Database Service in OCI leverages Availability Domains (ADs) and Fault Domains (FDs) to ensure high availability (HA) and disaster recovery (DR). ADs are isolated data centers within a region, preventing single points of failure, while FDs are subdivisions within an AD, further isolating hardware for redundancy. Availability Sets and Zones (Options A and B) are Azure-specific terms, and Geography (Option C) is too vague. OCI's architecture documentation confirms ADs and FDs as the foundation for HA/DR in database services.

NEW QUESTION # 58

Why would you federate the Azure tenant's Microsoft Entra ID with an OCI identity domain?

- A. To define an Azure Virtual Network (VNet) during provisioning
- B. To manage and create resources in the subscription
- C. To enable Azure users to log in to the OCI Console using their Azure credentials
- D. To enable two-way communication between Azure and OCI

Answer: C

Explanation:

Federating Microsoft Entra ID (Azure's identity service) with an OCI identity domain allows users managed in Azure to access OCI resources without needing separate OCI credentials. This is a key aspect of single sign-on (SSO).

Here's a breakdown:

Federation and SSO: By establishing a trust relationship between Microsoft Entra ID and OCI, users who have already authenticated to Azure can seamlessly access OCI resources. When an Azure user tries to access the OCI Console, they are redirected to Azure for authentication. After successful authentication in Azure, they are redirected back to OCI with a security token, granting them access.

Why the other options are incorrect:

- a). To define an Azure Virtual Network (VNet) during provisioning: Defining Azure VNet is related to networking configuration in Azure, not identity federation between Azure and OCI.
- b). To enable two-way communication between Azure and OCI: While interconnect solutions like Oracle Interconnect for Microsoft Azure enable network connectivity between the two clouds, identity federation is specifically about user authentication and authorization, not general network communication.
- c). To manage and create resources in the subscription: While federation allows authorized users to manage OCI resources, the primary purpose is about authentication (verifying user identity) rather than general resource management. OCI's Identity and Access Management (IAM) service handles authorization (controlling what actions users can perform).

NEW QUESTION # 59

.....

The design of our 1Z0-1151-25 guide training is ingenious and delicate. Every detail is perfect. For example, if you choose to study our learning materials on our windows software, you will find the interface our learning materials are concise and beautiful, so it can allow you to study 1Z0-1151-25 exam questions in a concise and undisturbed environment. In addition, you will find a lot of small buttons, which can give you a lot of help. Some buttons are used to hide or show the answer. What's more important is that we have spare space, so you can take notes under each question in the process of learning 1Z0-1151-25 Study Tool. When you start, there will be a timer to help you to time, so that you can finish the problem within the prescribed time and it can create an environment. If you are satisfied with our 1Z0-1151-25 exam questions, you can make a choice to purchase them.
