## **Pass4sure SPLK-4001 Exam Prep | The Best Splunk O11y Cloud Certified Metrics User 100% Free Mock Test**

We can produce the best SPLK-4001 exam prep and can get so much praise in the international market. On the one hand, the

software version can simulate the real examination for you and you can download our SPLK-4001 study materials. On the other hand, you can finish practicing all the contents in our SPLK-4001 practice materials within 20 to 30 hours. What's more, during the whole year after purchasing, you will get the latest version of our study materials for free. You can see it is clear that there are only benefits for you to buy our SPLK-4001 learning guide, just have a try right!

## Splunk O11y Cloud Certified Metrics User Sample Questions (Q19-Q24):

### NEW QUESTION # 19

Which of the following aggregate analytic functions will allow a user to see the highest or lowest n values of a metric?

- A. Maximum / Minimum
- B. Exclude / Include
- C. Best/Worst
- **D. Top / Bottom**

**Answer: D**

Explanation:

Explanation

The correct answer is D. Top / Bottom.

Top and bottom are aggregate analytic functions that allow a user to see the highest or lowest n values of a metric. They can be used to select a subset of the time series in the plot by count or by percent. For example, top (5) will show the five time series with the highest values in each time period, while bottom (10%) will show the 10% of time series with the lowest values in each time period. To learn more about how to use top and bottom functions in Splunk Observability Cloud, you can refer to this documentation<sup>1</sup>.

### NEW QUESTION # 20

The alert recipients tab specifies where notification messages should be sent when alerts are triggered or cleared. Which of the below options can be used? (select all that apply)

- A. Export to CSV.
- **B. Send an SMS message.**
- **C. Invoke a webhook URL.**
- **D. Send to email addresses.**

**Answer: B,C,D**

Explanation:

The alert recipients tab specifies where notification messages should be sent when alerts are triggered or cleared. The options that can be used are:

Invoke a webhook URL. This option allows you to send a HTTP POST request to a custom URL that can perform various actions based on the alert information. For example, you can use a webhook to create a ticket in a service desk system, post a message to a chat channel, or trigger another workflow<sup>1</sup>. Send an SMS message. This option allows you to send a text message to one or more phone numbers when an alert is triggered or cleared. You can customize the message content and format using variables and templates<sup>2</sup>. Send to email addresses. This option allows you to send an email notification to one or more recipients when an alert is triggered or cleared. You can customize the email subject, body, and attachments using variables and templates. You can also include information from search results, the search job, and alert triggering in the email<sup>3</sup>. Therefore, the correct answer is A, C, and D.

### NEW QUESTION # 21

In the Splunk distribution of the OpenTelemetry Collector, what is the difference between the agent\_config.yaml and the splunk-otel-collector.conf files?

- A. splunk-otel-collector.conf configures processors and agent\_config.yaml sets the memory limits for the collector.
- B. agent\_config.yaml configures the gateway's address and splunk-otel-collector.conf sets the memory limits for the collector.
- C. agent\_config.yaml defines the OpenTelemetry pipeline, and splunk-otel-collector.conf sets endpoint URLs and access tokens.

- D. splunk-otel-collector.conf defines the OpenTelemetry pipeline, and agent\_config.yaml sets endpoint URLs and access tokens.

**Answer: D**

#### NEW QUESTION # 22

Which of the following are true about organization metrics? (select all that apply)

- A. Organization metrics give insights into system usage, system limits, data ingested and token quotas.
- B. Organization metrics are included for free.
- C. Organization metrics count towards custom MTS limits.
- D. A user can plot and alert on them like metrics they send to Splunk Observability Cloud.

**Answer: A,B,D**

Explanation:

Explanation

The correct answer is A, C, and D. Organization metrics give insights into system usage, system limits, data ingested and token quotas. Organization metrics are included for free. A user can plot and alert on them like metrics they send to Splunk Observability Cloud.

Organization metrics are a set of metrics that Splunk Observability Cloud provides to help you measure your organization's usage of the platform. They include metrics such as:

Ingest metrics: Measure the data you're sending to Infrastructure Monitoring, such as the number of data points you've sent.

App usage metrics: Measure your use of application features, such as the number of dashboards in your organization.

Integration metrics: Measure your use of cloud services integrated with your organization, such as the number of calls to the AWS CloudWatch API.

Resource metrics: Measure your use of resources that you can specify limits for, such as the number of custom metric time series (MTS) you've created<sup>1</sup>. Organization metrics are not charged and do not count against any system limits. You can view them in built-in charts on the Organization Overview page or in custom charts using the Metric Finder. You can also create alerts based on organization metrics to monitor your usage and performance<sup>1</sup>. To learn more about how to use organization metrics in Splunk Observability Cloud, you can refer to this documentation<sup>1</sup>.

#### NEW QUESTION # 23

A customer operates a caching web proxy. They want to calculate the cache hit rate for their service. What is the best way to achieve this?

- A. Timeshift and Bottom N
- B. Percentages and ratios
- C. Chart Options and metadata
- D. Timeshift and Top N

**Answer: B**

Explanation:

According to the Splunk O11y Cloud Certified Metrics User Track document<sup>1</sup>, percentages and ratios are useful for calculating the proportion of one metric to another, such as cache hits to cache misses, or successful requests to failed requests. You can use the percentage() or ratio() functions in SignalFlow to compute these values and display them in charts. For example, to calculate the cache hit rate for a service, you can use the following SignalFlow code:

```
percentage(counters("cache.hits"), counters("cache.misses"))
```

This will return the percentage of cache hits out of the total number of cache attempts. You can also use the ratio() function to get the same result, but as a decimal value instead of a percentage.

```
ratio(counters("cache.hits"), counters("cache.misses"))
```

#### NEW QUESTION # 24

.....

The SPLK-4001 exam requires the candidates to have thorough understanding on the syllabus contents as well as practical

**SPLK-4001 Mock Test:** <https://www.validdumps.top/SPLK-4001-exam-torrent.html>

If I wanted to achieve motion blur without adding more depth of field SPLK-4001 in this scenario, I could have used a neutral density filter, Learn how Cisco platforms are achieving infrastructure virtualization.

The SPLK-4001 Certification Exam is mainly focused on equipping candidates with the most relevant practical skills to help them function as SPLK-4001 in the real settings.

Search for your connected exam and easily pass your Splunk exam with all the SPLK-4001 dumps, As for the safe environment and effective product, there are thousands of candidates are willing to choose SPLK-4001 Study Group our Splunk O11y Cloud Certified Metrics User study question, why don't you have a try for our study materials, never let you down!
