あなたはこのような人々の一人ですか。さまざまな資料とトレーニング授業を前にして、どれを選ぶか本当に困っているのです。もしそうだったら、これ以上困ることはないです。JPTestKingはあなたにとって最も正確な選択ですから。我々はあなたに試験問題と解答に含まれている全面的な試験資料を提供することができます。JPTestKingの解答は最も正確な解釈ですから、あなたがより良い知識を身につけることに助けになれます。JPTestKingを利用したら、IIBAのCCBA認定試験に受かることを信じています。それも我々が全てのお客様に対する約束です。

国際ビジネスアナリスト協会 (IIBA) のCCBA (ビジネスアナリスト能力認定) 試験は、ビジネスアナリストのためのグローバルに認められた認定プログラムです。CCBA認定は、ビジネスアナリストの分野で2~3年以上の経験を持つプロフェッショナルを対象としています。認定試験は、ビジネスアナリストの分野を促進することを目的とした非営利の専門家協会であるIIBAによって実施されます。

## IIBA Certification of Capability in Business Analysis (CCBA) 認定 CCBA 試験問題 (Q379-Q384):

質問 # 379

Which of the following is a business management strategy originally developed by Motorola, USA in 1986?

- A. Lean
- **B. Six Sigma**
- C. Quality Circle
- D. Waterfall model

正解: B

解説:

Explanation

Six Sigma is a business management strategy that aims to improve the quality and efficiency of processes, products, and services by reducing defects, errors, and variations. Six Sigma was originally developed by Motorola in 1986 as a way to achieve excellence in manufacturing and customer satisfaction. Six Sigma uses a set of tools, techniques, and methodologies, such as DMAIC (Define, Measure, Analyze, Improve, Control), DMADV (Define, Measure, Analyze, Design, Verify), and DFSS (Design for Six Sigma), to identify and eliminate the root causes of problems and to implement solutions that are aligned with the customer and business requirements. Six Sigma also relies on the involvement and training of employees at all levels of the organization, who are certified as Six Sigma experts, such as Green Belts, Black Belts, and Master Black Belts. ### 質問 # 380

A business analyst (BA) is assessing the completeness and coherence of the requirements. The BA has considered a variety of viewpoints and has a collection of views. What has the BA constructed?

- A. Business knowledge model
- **B. Requirements architecture**
- C. Requirements traceability matrix
- D. Solution design

正解: B

解説:

A requirements architecture is a collection of views that represent the requirements from different perspectives and levels of abstraction. A requirements architecture helps to assess the completeness and coherence of the requirements, as well as to identify any gaps, overlaps, or inconsistencies among the requirements. A requirements architecture also helps to communicate the requirements to different stakeholders and to facilitate the solution design and testing. A requirements architecture is different from a requirements traceability matrix, which is a tool that shows the relationship between requirements and other artifacts, such as test cases, design elements, or business objectives; a business knowledge model, which is a representation of the business concepts, rules, and relationships that are relevant to the business need or the solution; and a solution design, which is a description of how the solution will meet the requirements and deliver the expected value. ### 質問 # 381

A business analyst (BA) is logging the end user concerns and resolves these on a priority basis as mandated by the government. This project is a simple application, with no major strategic or financial impact to the organization. The BA strongly enforced end-to-end requirement traceability for this project. Why would the BA recommend this traceability approach?

- **A. Organizational standards**
- B. Costs and benefits
- C. Complexity of the domain
- D. Regulatory requirements

正解: A

解説:

Explanation

The BA recommended the requirement traceability approach because it is consistent with the organizational standards and the CCBA® or the BABOK® Guide, which suggest that requirement traceability is a core competency and a key technique for business analysis. Requirement traceability helps to ensure that the solution conforms to the requirements, that the requirements are aligned with the business objectives and stakeholder needs, and that the requirements are verified and validated. References: While I cannot provide direct links, I recommend reviewing the following sources for more information on requirement traceability: CCBA® handbook1, which provides the eligibility requirements, exam blueprint, and application process for the CCBA® certification.

BABOK® Guide2, which defines the knowledge areas, tasks, techniques, and competencies for business analysis, including requirement traceability as a technique under the Requirements Life Cycle Management knowledge area.

Business Analysis Expert Certification, CCBA® | IIBA®3, which offers an overview of the CCBA® certification, its benefits, and its competencies.

Requirements traceability : What, why and how > Business Analyst ...2, which explains the concept, purpose, and benefits of requirement traceability, and provides some examples and tips on how to implement it.

### 質問 # 382

The director of a furniture store manages a group of skilled carpenters who make furniture from locally available materials. The director decides to automate its inventory processes so that carpenters can place orders for raw materials themselves. A business analyst (BA) is engaged to define the requirements and propose options for commercial off-the-shelf (COTS) inventory management solutions. After meeting with the director, the BA needs to schedule a workshop with the carpenters to:

- A. convey the benefits for the automation to the end users.
- B. present the proposed future state to the end users.
- C. investigate whether automation is a constant for the end user.
- D. demonstrate some of the proposed products to the end users.

正解: C

解説:

According to the BABOK Guide, a constant is a requirement that cannot be changed or negotiated, and it may be imposed by the business, technical, or regulatory environment1. In this case, the director has decided to automate the inventory processes, but the BA needs to validate whether this is a constant for the end user, i.e., the carpenters. The BA needs to understand the carpenters' needs, expectations, and preferences regarding the automation, and how it will affect their work. The BA also needs to elicit and analyze the requirements for the COTS inventory management solutions from the end users' perspective.

### 質問 # 383

When you, a Business Analyst, work with your stakeholders, team, and experts to define the business analysis activities, what thing do you actually define?

- A. You define the communication needs.
- B. You define the roles and responsibilities.
- C. You define the business analysis approach.
- D. You define the requirements of the initiative.

正解: C

解説:

Explanation

The purpose of the plan business analysis approach is to define the business analysis approach.

Answer A is incorrect. The plan business analysis approach does not define the requirements.

Answer B is incorrect. The plan business analysis approach does not define the roles and responsibilities.

Answer C is incorrect. The plan business analysis approach does not define the communication needs.
