

高通過率的Integration-Architect最新試題: Salesforce Certified Integration Architect &有效Salesforce Integration-Architect認證指南

P.S. Testpdf在Google Drive上分享了免費的、最新的Integration-Architect考試題庫: <https://drive.google.com/open?id=170QEZk167ZcdcmFoF5XDoxP1k-o94iZd>

Testpdf的產品是由很多的資深IT專家利用他們的豐富的知識和經驗針對IT相關認證考試研究出來的。所以你要是參加Salesforce Integration-Architect 認證考試並且選擇我們的Testpdf, Testpdf不僅可以保證為你提供一份覆蓋面很廣和品質很好的考試資料來讓您做好準備來面對這個非常專業的考試, 而且幫你順利通過Salesforce Integration-Architect 認證考試拿到認證證書。

Testpdf提供的Salesforce Integration-Architect 認證考試測試練習題和真實的考試題目很相似。如果你選擇了Testpdf提供的測試練習題和答案, 我們會給你提供一年的免費線上更新服務。Testpdf可以100%保證你通過考試, 如果你的考試未通過, 我們將全額退款給你。

Integration-Architect認證指南 - Integration-Architect試題

我們Testpdf Salesforce的Integration-Architect考試的試題及答案, 為你提供了一切你所需要的考前準備資料, 關於Salesforce的Integration-Architect考試, 你可以從不同的網站或書籍找到這些問題, 但關鍵是邏輯性相連, 我們的試題及答案不僅能第一次毫不費力的通過考試, 同時也能節省你寶貴的時間。

最新的 Salesforce Integration Architecture Designer Integration-Architect 免費考試真題 (Q127-Q132):

問題 #127

A customer is migrating from an old legacy system to Salesforce. As part of the modernization effort, the customer would like to integrate all existing systems that currently work with its legacy application with Salesforce.

Which constraint/pain-point should an integration architect consider when choosing the integration pattern

/mechanism?

- A. System types APIs, File systems, Email
- B. Reporting and usability requirements
- C. Multi-language and multi-currency requirement

答案： A

問題 #128

Northern Trail Outfitters is creating a distributable Salesforce package for other Salesforce orgs within the company. The package needs to call into a custom Apex REST endpoint in the central org. The security team wants to ensure a specific integration account is used in the central org that they will authorize after installation of the package.

Which three items should an architect recommend to secure the integration in the package?

Choose 3 answers

- A. Use an encrypted field to store the password that the security team enters and use password management for external orgs and set the encryption method to TLS 1.2. Use the Auth Provider configured and select the identity type as Named Principal with OAuth 2.0 as the protocol and
- B. Select Start Authentication Flow on Save.
- C. Create a connected app in the central org and add the callback URL of each org the package is installed in to redirect to after successful authentication.
- D. Create an Auth provider in the package and set the consumer key and consumer secret of the connected app in the central org.
- E. Contact Salesforce support and create a case to temporarily enable API access for managed packages.

答案： B,C,D

問題 #129

Northern Trail Outfitters (NTO) uses a custom mobile app to interact with its customers. One of the features of the app is Salesforce Chatter Feeds. NTO wants to automatically post a Chatter item to Twitter whenever the post includes the #thanksNTO hashtag. Which API should an integration architect use to meet this requirement?

- A. Connect REST API
- B. Streaming API to generate PushTopic
- C. REST API

答案： A

解題說明：

When designing integrations that specifically involve Chatter, social collaboration, or Experience Cloud sites, the Connect REST API (formerly known as the Chatter REST API) is the architecturally recommended choice. While the standard REST API is optimized for CRUD operations on data records, the Connect REST API is specifically designed to handle the complex, nested structures of social feeds, including posts, comments, hashtags, and mentions.

The Connect REST API provides a specialized resource for feed elements that simplifies the process of identifying specific social markers like hashtags. In this use case, the mobile app or a middleware service can subscribe to or query the feed. The Connect REST API returns structured data where hashtags are identified as distinct message segments, making it trivial for an application logic to detect the #thanksNTO tag and trigger a subsequent call to the Twitter API.

From an architectural standpoint, using the Connect REST API offers several advantages over the standard REST API or Streaming API for this requirement:

* Efficiency: Connect REST API responses are structured specifically for presentation in mobile applications, providing only the relevant social metadata and localized content needed for the feed.

* Feature Richness: It provides native support for social actions such as liking, sharing, and following, which are often required alongside feed monitoring.

* Scalability: It is designed to handle the high-volume, real-time nature of social interactions within Experience Cloud and mobile ecosystems.

While the Streaming API (Option B) can notify an application of record changes, it does not provide the rich, formatted social context that the Connect REST API delivers. The standard REST API (Option A) could technically access FeedItem records, but it would require significant custom parsing logic to identify hashtags within the raw body text, whereas the Connect REST API handles this segmenting natively. Therefore, for building custom mobile experiences that interact with Chatter data, the Connect REST API is

the superior solution.

問題 #130

Customer is evaluating Platform Events solution and would like help in comparing/contrasting it with Outbound Message for a real-time / near-real time needs. They expect 3,000 consumers of messages from Salesforce.

Which three considerations should be evaluated and highlighted when deciding between the solutions?

Choose 3 answers

- A. Both Platform Events and Outbound Message offer declarative means for asynchronous near-real time needs. They aren't best suited for real-time integrations.
- B. Both Platform Events and Outbound Message are highly scalable. However, unlike Outbound Message, only Platform Events have Event Delivery and Event Publishing limits to be considered.
- C. Number of concurrent subscribers to Platform Events is capped at 2,000. An Outbound Message configuration can pass only 100 notifications in a single messages to a SOAP end point.
- D. In both Platform Events and Outbound Messages, the event messages are retried by and delivered in sequence, and only once. Salesforce ensures there is no duplicate message delivery.
- E. Message sequence is possible in Outbound Message but not guaranteed with Platform Events. Both offer very high reliability. Fault handling and recovery are fully handled by Salesforce.

答案： B,C,D

解題說明：

https://developer.salesforce.com/docs/atlas.en-us.platform_events.meta/platform_events/platform_event_limits.htm

問題 #131

Which two system constraint questions should be considered when designing an integration to send orders from Salesforce to a fulfillment system?

Choose 2 answers

- A. Can the fulfillment system participate in idempotent design to avoid duplicate orders?
- B. Can the fulfillment system implement a contract-first Outbound Messaging interface?
- C. Which system will validate order shipping addresses?
- D. What latency is acceptable for orders to reach the fulfillment system?

答案： A,D

解題說明：

The system constraint questions that should be considered when designing an integration to send orders from Salesforce to a fulfillment system are related to the performance, reliability, and scalability of the integration.

The latency and idempotency of the integration are important factors that affect these aspects. Therefore, the questions A and D are relevant for the integration design. The question B is related to the business logic of the order validation, which is not a system constraint question. The question C is related to the implementation details of the Outbound Messaging interface, which is not a system constraint question either

問題 #132

.....

永遠不要說你已經盡力了。這個對每個人的忠告，就算你認為自己沒有能力通過苛刻的Salesforce的Integration-Architect考試認證。因為就算你沒有通過Salesforce的Integration-Architect考試認證，你可以找一個快捷又方便省時又不費力的培訓工具，來幫助你通過Salesforce的Integration-Architect考試認證，Testpdf Salesforce的Integration-Architect考試培訓資料就是個很不錯的黃金培訓資料，它可以幫助你順利通過考試，保證100%通過，而且價格很合理，保證你利用了它會受益匪淺，所以說永遠不要說自己已經盡力了，不放棄下一秒就是希望，趕緊抓住你的希望吧，就在Testpdf Salesforce的Integration-Architect考試培訓資料裏。
