Latest Braindumps SPLK-2002 Book, Valid SPLK-2002 Exam Sims
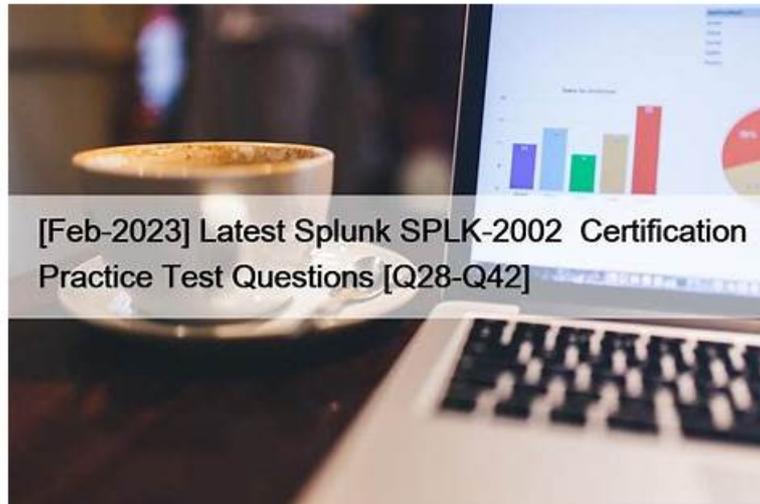

Our system is high effective and competent. After the clients pay successfully for the SPLK-2002 certification material the system will send the products to the clients by the mails. The clients click on the links in the mails and then they can use the SPLK-2002 prep guide materials immediately. It takes only a few minutes for you to make the successful payment for our SPLK-2002 learning file. Our system will automatically send the updates of the SPLK-2002 learning file to the clients as soon as the updates are available. So our system is wonderful.

Some of our new customers will suppose that it will cost a few days to send them our SPLK-2002 exam questions after their purchase. But in fact, only in 5 to 10 minutes after payment, you can use SPLK-2002 preparation materials very fluently. We know you are very busy, so we will not waste any extra time. In this fast-paced society, you must cherish every minute. Using SPLK-2002 training quiz is really your most efficient choice.

SPLK-2002 Exam Questions - Splunk Enterprise Certified Architect Study Question & SPLK-2002 Test Guide

With these two Splunk Enterprise Certified Architect SPLK-2002 practice exams, you will get the actual Splunk SPLK-2002 exam environment. Whereas the TrainingDumps PDF file is ideal for restriction-free test preparation. You can open this PDF file and revise SPLK-2002 Real Exam Questions at any time. Choose the right format of Splunk Enterprise Certified Architect SPLK-2002 actual questions and start Splunk SPLK-2002 preparation today.

Splunk Enterprise Certified Architect Sample Questions (Q169-Q174):

NEW QUESTION # 169
(What is a recommended way to improve search performance?)

- A. Use the shortest query possible.
- B. Leverage the not expression to limit returned results.
- C. Use non-streaming commands as early as possible.
- D. Filter as much as possible in the initial search.

Answer: D

Explanation:
Splunk Enterprise Search Optimization documentation consistently emphasizes that filtering data as early as possible in the search

pipeline is the most effective way to improve search performance. The base search (the part before the first pipe |) determines the volume of raw events Splunk retrieves from the indexers. Therefore, by applying restrictive conditions early-such as time ranges, indexed fields, and metadata filters-you can drastically reduce the number of events that need to be fetched and processed downstream.

The best practice is to use indexed field filters (e.g., index=security sourcetype=syslog host=server01) combined with search or where clauses at the start of the query. This minimizes unnecessary data movement between indexers and the search head, improving both search speed and system efficiency.

Using non-streaming commands early (Option C) can degrade performance because they require full result sets before producing output. Likewise, focusing solely on shortening queries (Option A) or excessive use of the not operator (Option D) does not guarantee efficiency, as both may still process large datasets.

Filtering early leverages Splunk's distributed search architecture to limit data at the indexer level, reducing processing load and network transfer.

NEW QUESTION # 170

Which Splunk Enterprise offering has its own license?

- A. Splunk Universal Forwarder
- B. Splunk Cloud Forwarder
- C. Splunk Forwarder Management
- D. Splunk Heavy Forwarder

Answer: A

Explanation:
The Splunk Universal Forwarder is the only Splunk Enterprise offering that has its own license. The Splunk Universal Forwarder license allows the forwarder to send data to any Splunk Enterprise or Splunk Cloud instance without consuming any license quota.

The Splunk Heavy Forwarder does not have its own license, but rather consumes the license quota of the Splunk Enterprise or Splunk Cloud instance that it sends data to.

The Splunk Cloud Forwarder and the Splunk Forwarder Management are not separate Splunk Enterprise offerings, but rather features of the Splunk Cloud service. For more information, see [About forwarder licensing] in the Splunk documentation.

NEW QUESTION # 171

In a four site indexer cluster, which configuration stores two searchable copies at the origin site, one searchable copy at site2, and a total of four searchable copies?

- A. site_replication_factor = origin:2, site1:2, total:4
- B. site_search_factor = origin:2, site2:1, total:4
- C. site_replication_factor = origin:2, site2:1, total:4
- D. site_search_factor = origin:2, site1:2, total:4

Answer: C

NEW QUESTION # 172

A search head cluster member contains the following in its server .conf. What is the Splunk server name of this member?

- A. shc4
- B. node1
- C. idxc2
- D. node3

Answer: D

Explanation:
The Splunk server name of the member can typically be determined by the serverName attribute in the server.
conf file, which is not explicitly shown in the provided snippet. However, based on the provided configuration snippet, we can infer that this search head cluster member is configured to communicate with a cluster master (master_uri) located at node1 and a management node (mgmt_uri) located at node3. The serverName is not the same as the master_uri or mgmt_uri; these URIs indicate the location of the master and management nodes that this member interacts with.
Since the serverName is not provided in the snippet, one would typically look for a setting under the [general] stanza in server.conf. However, given the options and the common naming conventions in a Splunk environment, node3 would be a reasonable guess for the server name of this member, since it is indicated as the management URI within the [shclustering] stanza, which suggests it might be the name or address of the server in question.
For accurate identification, you would need to access the full server.conf file or the Splunk Web on the search head cluster member and look under Settings > Server settings > General settings to find the actual serverName. Reference for these details would be found in the Splunk documentation regarding the configuration files, particularly server.conf.

NEW QUESTION # 173
Which of the following will cause the greatest reduction in disk size requirements for a cluster of N indexers running Splunk Enterprise Security?

- A. Setting the cluster search factor to N-1.
- B. Setting the cluster replication factor to N-1.
- C. Increasing the number of buckets per index.
- D. Decreasing the data model acceleration range.

Answer: B
