We also fully consider the characteristics of the user on studying the 2V0-11.25 exam questions. For example, many people who choose to obtain a 2V0-11.25 certificate don't have a lot of time to prepare for the exam. Based on this point, our team of experts really took a lot of thought in the layout of the content. The contents of 2V0-11.25 Exam Materials are carefully selected by experts. We hope you can get the most effective knowledge in the shortest possible time.

Three versions are available for 2V0-11.25 study materials, and you can choose the most suitable one according to your own needs. 2V0-11.25 PDF version is printable, and you can print them and take some notes on them if you want. 2V0-11.25 Soft test engine can be used in more than 200 personal computers, and they support MS operating system. 2V0-11.25 Online Test engine is convenient and easy to learn, and it supports all web browsers. You can have a general review of what you have learned. Just have a try, and there is always a version for you.

Pass Guaranteed Quiz VMware - Perfect 2V0-11.25 - Exam VMware Cloud Foundation 5.2 Administrator PDF

Now VMware 2V0-11.25 certification test is very popular. Not having got 2V0-11.25 certificate, you must want to take the exam. Indeed, VMware 2V0-11.25 test is very difficult exam, but this is not suggested that you cannot get high marks and pass your exam with ease. Without knowing the shortcut of VMware 2V0-11.25 Exam, do you want to know the testing technique? As for the point, I can tell you that Dumpexams VMware 2V0-11.25 study guide is your unique choice.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q90-Q95):

NEW QUESTION # 90

An organization is integrating VMware vCenter with Active Directory (AD) to streamline user authentication.

As part of this process, the administrator needs to add AD as an identity source in vCenter.

Which three steps must be performed to successfully add AD as an identity source? (Choose three.)

- A. Select 'Add Identity Source' and choose 'Active Directory (Integrated Windows Authentication)'.
- B. Navigate to the vCenter Single Sign-On configuration in the vSphere Client.
- C. Reboot the vCenter Server to apply the identity source settings.
- D. Configure DNS settings on all ESXi hosts to point to the AD DNS servers.
- E. Enter the Domain Name and the credentials of an AD user with domain join privileges

Answer: A,B,E

Explanation:

When adding AD as an identity source, you need to enter the Domain Name and provide the credentials of an AD user with domain join privileges to authenticate and add the domain.

In the vSphere Client, you need to select 'Add Identity Source' and choose the appropriate method for AD integration, which is typically 'Active Directory (Integrated Windows Authentication)'.

The process to add AD as an identity source is performed under the vCenter Single Sign-On (SSO) configuration in the vSphere Client.

NEW QUESTION # 91

An administrator is deploying a new VMware Cloud Foundation (VCF) environment. After uploading the completed Deployment Parameter Workbook, the validation task fails and an error message is displayed within the VMware Cloud Builder GUI.

Which log file can the administrator use to identify the cause of the validation error?

- A. jsongenerator-<timestamp>.log
- B. domainmanager.log
- C. sos.log
- D. vcf-bringup-debug.log

Answer: D

Explanation:

According to the official VMware Cloud Foundation Deployment Guide and VMware Cloud Builder troubleshooting documentation, the primary log file used for tracking and diagnosing bring-up and validation errors in a new VCF deployment is:

A). vcf-bringup-debug.log

Exact Extract from VMware Documentation:

"The vcf-bringup-debug.log file records detailed information about all bring-up operations, including parameter validation checks, environment checks, and errors encountered during the deployment process.

When a validation task fails in the Cloud Builder GUI, this log file provides the necessary diagnostic information to identify the cause of the error." Why Not the Other Options?

B). sos.log Used for SDDC Manager service health and not specific to Cloud Builder validation or deployment tasks.

C). domainmanager.log Used for ongoing domain management and operations within SDDC Manager, not for Cloud Builder or bring-up process.

D). jsongenerator-<timestamp>.log Related to the generation of JSON files from the parameter workbook, but not the source for in-depth validation or deployment errors.

Summary:

When a validation task fails during the deployment of a new VMware Cloud Foundation environment in Cloud Builder, the administrator should review the vcf-bringup-debug.log file to diagnose and resolve the error, as directed by official VMware documentation.

NEW QUESTION # 92

Following an internal security audit of the new VMware Cloud Foundation (VCF) instance, the following audit finding was documented for priority remediation:

All users from the custom administrators group could access the Direct Console User Interface (DCUI) on all ESXi hosts within the workload domain. RISK=High, IMPACT=High The company IT security policy around accessing ESXi servers states the following:

Users within the custom administrators group must access ESXi host configurations from within vCenter Server or the vSphere Web Client only.

Only users within the restricted administrators group must be allowed direct access to ESXi hosts.

Which two actions should the administrator perform on each of the hosts within the workload domain to remediate the security finding? (Choose two.)

- A. Disable SSH and the ESXi Shell.
- B. Add the custom administrators group to the DCUI.Access advanced system setting.
- C. Enable Strict Lockdown Mode.
- **D. Add the restricted administrators group to the DCUI.Access advanced system setting.**
- **E. Enable Normal Lockdown Mode.**

Answer: D,E

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From the VMware vSphere Security Guide and official documentation for Lockdown Mode:

C . Add the restricted administrators group to the DCUI.Access advanced system setting.

Exact Extract:

"You can add users or groups to the DCUI.Access advanced system setting to allow them to access the Direct Console User Interface (DCUI) even when the host is in lockdown mode. Ensure that only the authorized group (restricted administrators group) is included in this setting, and remove any other groups that should not have DCUI access." E . Enable Normal Lockdown Mode.

Exact Extract:

"When Normal Lockdown Mode is enabled, only users and groups in the DCUI.Access list can log in to the Direct Console User Interface (DCUI) of the host. All other local or direct access is denied unless explicitly permitted in the DCUI.Access list. This mode allows vCenter-controlled access for all other administrative operations, which matches the company's security policy requirements."

Why Not the Other Options?

A: Disabling SSH and ESXi Shell is best practice but is not directly related to DCUI or lockdown mode.

B: Adding the custom administrators group would violate the stated security policy.

D: Strict Lockdown Mode prevents all DCUI access except for the root user, which is more restrictive than what the policy requires. The policy permits a specific group to have DCUI access, which is supported in Normal Lockdown Mode, not Strict.

Summary:

To meet the security policy and remediate the audit finding, the administrator must add only the restricted administrators group to the DCUI.Access setting (C) and enable Normal Lockdown Mode (E) on each ESXi host.

This configuration ensures that only members of the restricted administrators group can directly access the DCUI, and all other users (including those from the custom administrators group) must access the host through vCenter Server or the vSphere Web Client, fully aligning with the official VMware documentation and security best practices.

NEW QUESTION # 93

An administrator needs to configure an ESXi host and create a host profile to ensure consistent configuration across multiple hosts in a cluster.

Which three steps are necessary to achieve this? (Choose three.)

- A. Manually configure each host to match the reference host settings.
- **B. Extract the host profile from the configured reference host.**
- **C. Remediate the non-compliant hosts to ensure they match the host profile.**
- **D. Configure the desired settings on a reference ESXi host.**
- E. Apply the host profile to all hosts in the cluster.

Answer: B,C,D

Explanation:

First, configure the desired settings on a reference ESXi host. This host will be used as the template for creating a consistent configuration across the cluster.

After configuring the reference host, extract the host profile from it. This captures the configuration of the reference host as a host profile.

Remediation is necessary to ensure that other hosts in the cluster align with the reference host's configuration. The host profile can be applied, and remediation will correct any non-compliant settings on other hosts.

NEW QUESTION # 94

Which is the appropriate first action to take to resolve dropped network packets on an ESXi host?

- A. Enable Storage I/O Control
- B. Increase the CPU and memory allocation for VMs
- C. Migrate VMs to another data store
- **D. Check physical network switch configuration**

Answer: D

Explanation:

Dropped network packets are often caused by misconfigurations or issues at the physical network layer.

Checking the physical network switch configuration is the first step to ensure that the network settings, such as VLANs, uplinks, and port configurations, are correctly set up. This ensures proper connectivity and traffic flow for the ESXi host and the VMs.

NEW QUESTION # 95

.....

Besides this PDF format, VMware 2V0-11.25 practice exams in desktop and web-based versions are available to aid you in recognizing both your weaker and stronger concepts. These real VMware 2V0-11.25 Exam Simulator exams also points out your mistakes regarding the VMware 2V0-11.25 exam preparation.
