100% Pass Quiz 2026 Salesforce Plat-Dev-301: Salesforce Certified Platform Developer II - Multiple Choice Latest Test Guide

Our Plat-Dev-301 exam questions boost 3 versions: PDF version, PC version, APP online version. You can choose the most suitable version of the Plat-Dev-301 study guide to learn. Each version of Plat-Dev-301 training prep boosts different characteristics and different using methods. For example, the APP online version of Plat-Dev-301 Guide Torrent is used and designed based on the web browser and you can use it on any equipment with the browser. It boosts the functions of exam simulation, time-limited exam and correcting the mistakes.

Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q189-Q194):

NEW QUESTION # 189

Which two queries are selective SOQL queries and can be used for a large data set of 200,000 Account records?
Choose 2 answers

- A. `SELECT Id FROM Account WHERE Name IN (List of Names) AND Customer_Number_c = 'ValueA'`

- B. SELECT Id FROM Account WHERE Name != ''
- C. SELECT Id FROM Account WHERE Name LIKE '!'-NULL
- D. SELECT Id FROM Account WHERE Id IN (List of Account Ids)

Answer: A,B

Explanation:

Selective queries in SOQL are optimized for performance. Query B is selective because it filters out empty names, which are likely to be less in number. Query C is selective if the list of names is small, and 'Customer_Number_c' is indexed or can be used as an external ID field. Working with Very Large SOQL Queries

NEW QUESTION # 190

Refer to the component code and requirements below:

- ☐ A)
- ☐ B)
- ☐ C)
- ☐ D)

- A. Option B
- B. Option D
- C. Option A
- D. Option C

Answer: A

NEW QUESTION # 191

A developer is creating a Lightning web component that displays a list of records in a lightning-datatable. After saving a new record to the database, the list is not updating.

What should the developer change in the code above for this to happen?

- A. Add the @track decorator to the data variable.
- B. Create a new variable to store the result and annotate it with @track.
- C. Create a variable to store the result and call refreshApex().
- D. Call refreshApex() ON this.data.

Answer: C

Explanation:

In Lightning Web Components (LWC), the data displayed in a component is not automatically refreshed when a new record is saved to the database. To refresh the displayed list of records in a lightning-datatable after a save operation, developers should use the refreshApex() function. This function is imported from the @salesforce/apex module and is used to refresh the cache and re-execute the Apex wire method to fetch the latest data from the server. The @track decorator is no longer necessary in most cases due to reactive properties being the default behavior in LWC as of Spring '20 release. Also, calling refreshApex() on this.data directly or creating a new tracked variable will not initiate a refresh of the cached data.

NEW QUESTION # 192

Instead of waiting to send emails to support personnel directly from the finish method of a batch Apex process, Universal Containers wants to notify an external system in the event that an unhandled exception occurs.

What is the appropriate publish/subscribe logic to meet this requirement?

- A. Publish the error event with a Flow.
- B. No publishing is necessary. Have the external system subscribe to the BatchApexErrorEvent.
- C. Publish the error event using the addError method.

- D. Publish the error event using the EventBus. publish () method.

Answer: B

Explanation:

Use BatchApexErrorEvent for notifications. It's automatically triggered for unhandled exceptions in batch Apex. No need for manual publishing. External systems can subscribe to this event to receive notifications.

NEW QUESTION # 193

Universal Containers stores user preferences in a Hierarchy Custom Setting, User_Prefs__c, with a Checkbox field, Show_Help__c. Company-level defaults are stored at the organizational level, but may be overridden at the user level. If a user has not overridden preferences, then the defaults should be used.

How should the Show_Help__c preference be retrieved for the current user?

- A. Boolean show = User_Prefs__c.getValues(UserInfo.getUserId()).Show_Help__c;
- **B. Boolean show = User_Prefs__c.getInstance().Show_Help__c;**
- C. Boolean show = User_Prefs__c.Show_Help__c;
- D. Boolean show = User_Prefs__c.getValues().Show_Help__c;

Answer: B

Explanation:

To retrieve the Show_Help__c preference for the current user from a hierarchy custom setting, the getInstance() method should be used. This method retrieves the custom setting data for the user or the organization default if no user-specific setting is found.

NEW QUESTION # 194

.....

The accuracy rate of Plat-Dev-301 test training materials of VCE4Plus is high with wide coverage. It will be the most suitable Plat-Dev-301 test training materials and the one you need most to pass Plat-Dev-301 exam. We promise that we will provide renewal service freely as long as one year after you purchase our Plat-Dev-301 Dumps; if you fail Plat-Dev-301 test or there are any quality problem of our Plat-Dev-301 exam dumps and training materials, we will give a full refund immediately.

Plat-Dev-301 Test Simulator: <https://www.vce4plus.com/Salesforce/Plat-Dev-301-valid-vce-dumps.html>

In the end, you will build a clear knowledge structure of the Plat-Dev-301 Test Simulator - Salesforce Certified Platform Developer II - Multiple Choice exam, Salesforce Test Plat-Dev-301 Guide.
