問題 #18

With the Aruba CX switch configuration, what is the first-hop protocol feature that is used for VSX L3 gateway as per Aruba recommendation?

- A. Active-Active VRRP
- **B. Active Gateway**
- C. VRRP
- D. SVI with vsx-sync

答案: B

解題說明:

Explanation

Active Gateway is the first-hop protocol feature that is used for VSX L3 gateway as per Aruba recommendation. Active Gateway is a feature that allows both VSX peers to act as active gateways for different subnets, eliminating the need for VRRP or other first-hop redundancy protocols. Active Gateway also provides fast failover and load balancing for L3 traffic across the VSX peers. The

other options are incorrect because they are either not recommended or not supported by Aruba CX VSX. References:

問題 #20

Which component is used by the Aruba Network Analytics Engine (NAE)?

- A. JSON-based scripts
- B. Lisp-based agents
- C. Ruby-based scripts
- D. Current State Database

答案: A

解題說明:

JSON-based scripts are the components used by the Aruba Network Analytics Engine (NAE). NAE is a feature that provides network monitoring and troubleshooting capabilities using JSON-based scripts called agents. Agents collect data from various sources, such as switch CLI commands, SNMP queries, REST APIs, etc., and analyze them using predefined rules and thresholds. Agents can also generate alerts, notifications, actions, or reports based on the analysis results.

問題 #21

What are the requirements to ensure that WMM is working effectively'? (Select two)

- A. The APs and the controller are Wi-Fi CERTIFIED for WMM which is enabled
- B. The AP needs to be connected via a tagged VLAN to the wired port
- C. The Aruba AOS10 APs installed have to be converted to controlled mode
- D. The Client must be Wi-Fi CERTIFIED for WMM and configured for WMM marking
- E. All APs need to be from the AP-5xx series and AP-6xx series which are Wi-Fi CERTIFIED 6.

答案: A,D

解題說明:

These are the correct requirements to ensure that WMM (Wi-Fi Multimedia) is working effectively. WMM is a standard that provides quality of service (QoS) for wireless networks by prioritizing traffic into four categories: voice, video, best effort, and background. To use WMM, both the APs and the controller must be Wi-Fi CERTIFIED for WMM, which means they have passed interoperability tests and comply with the standard. WMM must also be enabled on the APs and the controller, which is usually the default setting. The client device must also be Wi-Fi CERTIFIED for WMM and configured for WMM marking, which means it can tag its traffic with the appropriate priority level based on the application type. The other options are incorrect because they are either not related to WMM or not required for WMM to work. Reference:

問題 #22

When setting up an Aruba CX VSX pair, which information does the Inter-Switch Link Protocol configuration use in the configuration created?

- A. hello interval is 1s by default
- B. hello interval is disabled by default
- C. hello interval is based on the value set by dead interval
- D. hello interval 100ms by default

答案: A

解題說明:

Explanation

The reason is that the Inter-Switch Link Protocol (ISLP) is a protocol that enables VSX stack join and synchronization between two VSX peer switches. ISLP uses a hello interval to exchange control messages between the switches.

The hello interval is a parameter that specifies the time interval between sending hello messages. The default value of the hello interval is 1 second. The hello interval can be configured from 1 second to 10 seconds.
