AIGP Dumps Guide Exam Instant Download | Updated Exam AIGP Material

IAPP Certification AIGP Exam is very popular among the IT people to enroll in the exam. Passing IAPP certification AIGP exam can not only change your work and life can bring, but also consolidate your position in the IT field. But the fact is that the passing rate is very low.

IAPP Certified Artificial Intelligence Governance Professional Sample Questions (Q98-Q103):

NEW QUESTION # 98

A regulator has ruled that the AI model used by some features of your product should not be used in their jurisdiction. What is the most robust way of reacting to this situation?

- A. Shut down the service in the jurisdiction to pressure the regulator to change their position.
- **B. Implement a feature flag to enable or disable the features based on a user's country of origin.**
- C. Re-train your AI model and deploy it immediately to show you can react quickly to regulator's requirements.
- D. Create a second, separate version of the application and deploy it to users in the jurisdiction.

Answer: B

NEW QUESTION # 99

Why is it important that conformity requirements are satisfied before an AI system is released into production?

- **A. To comply with legal and regulatory standards, ensuring the AI system is safe and trustworthy.**
- B. To ensure the AI system is easy for end-users to operate.
- C. To ensure the visual design is fit for purpose.
- D. To guarantee interoperability of the AI system across multiple platforms and environments.

Answer: A

Explanation:

The correct answer is D because conformity requirements are primarily intended to ensure that AI systems meet applicable legal, regulatory, and safety standards before deployment. AI governance frameworks, including the EU AI Act and international standards, require conformity assessments to verify that systems are safe, reliable, and compliant with risk management, documentation, and performance obligations. These assessments help identify and mitigate risks prior to market release, particularly for high-risk AI systems that may impact individuals' rights, health, or safety. Conformity ensures accountability, transparency, and trustworthiness, which are central principles of responsible AI governance. The other options relate to usability or technical considerations, but they do not address the primary purpose of conformity assessments, which is regulatory compliance and risk mitigation prior to deployment.

NEW QUESTION # 100

What is the technique to remove the effects of improperly used data from an ML system?

- A. Model inversion.
- **B. Model disgorgement.**
- C. Data cleansing.
- D. Data de-duplication.

Answer: B

Explanation:

Model disgorgement is the technique used to remove the effects of improperly used data from an ML system. This process involves retraining or adjusting the model to eliminate any biases or inaccuracies introduced by the inappropriate data. It ensures that the model's outputs are not influenced by data that was not meant to be used or was used incorrectly. Reference: AIGP Body of Knowledge on Data Management and Model Integrity.

NEW QUESTION # 101

CASE STUDY

Please use the following to answer the next question:

A local police department in the United States procured an AI system to monitor and analyze social media feeds, online marketplaces and other sources of public information to detect evidence of illegal activities (e.g., sale of drugs or stolen goods). The AI system works by surveying the public sites in order to identify individuals that are likely to have committed a crime. It cross-references the individuals against data maintained by law enforcement and then assigns a percentage score of the likelihood

of criminal activity based on certain factors like previous criminal history, location, time, race and gender.

The police department retained a third-party consultant to assist in the procurement process, specifically to evaluate two finalists. Each of the vendors provided information about their system's accuracy rates, the diversity of their training data and how their system works. The consultant determined that the first vendor's system has a higher accuracy rate and based on this information, recommended this vendor to the police department.

The police department chose the first vendor and implemented its AI system. As part of the implementation, the department and consultant created a usage policy for the system, which includes training police officers on how the system works and how to incorporate it into their investigation process.

The police department has now been using the AI system for a year. An internal review has found that every time the system scored a likelihood of criminal activity at or above 90%, the police investigation subsequently confirmed that the individual had, in fact, committed a crime. Based on these results, the police department wants to forego investigations for cases where the AI system gives a score of at least 90% and proceed directly with an arrest.

What should a police officer explain about the use of the AI system at the time of arrest?

- A. Information about the public sites surveilled by the AI system.
- **B. Information about how the individual was identified by the AI system.**
- C. Information about use of the AI system in prosecuting the case.
- D. Information about the scoring protocol of the AI system.

Answer: B

Explanation:

The officer should inform the individual how the AI system was used to identify them, ensuring transparency about the basis for the arrest decision.

NEW QUESTION # 102

CASE STUDY

A global marketing agency is adapting a large language model ("LLM") to generate content for an upcoming marketing campaign for a client's new product: a hard hat designed for construction workers of any gender to better protect them from head injuries.

The marketing agency is accessing the LLM through an application programming interface ("API") developed by a third-party technology company. They want to generate text to be used for targeted advertising communications that highlight the benefits of the hard hat to potential purchasers. Both the marketing agency and the technology company have taken reasonable steps to address AI governance.

The marketing company has:

- * Entered into a contract with the technology company with suitable representations and warranties.
- * Completed an impact assessment on the LLM for this intended use.
- * Built technical guidance on how to measure and mitigate bias in the LLM.
- * Enabled technical aspects of transparency, explainability, robustness and privacy.
- * Followed applicable regulatory requirements.
- * Created specific legal statements and disclosures regarding the use of the AI on its client's advertising.

The technology company has:

- * Provided guidance and resources to developers to address environmental concerns.
- * Built technical guidance on how to measure and mitigate bias in the LLM.
- * Provided tools and resources to measure bias specific to the LLM.
- * Enabled technical aspects of transparency, explainability, robustness and privacy.
- * Mapped and mitigated potential societal harms and large-scale impacts.
- * Followed applicable regulatory requirements and industry standards.
- * Created specific legal statements and disclosures regarding the LLM, including with respect to IP and rights to data.

Which stakeholder is responsible for the lawful collection of data used to train the foundational AI model?

- **A. The tech company**
- B. The marketing agency's client
- C. The marketing agency
- D. The data aggregator

Answer: A

Explanation:

The correct answer is B - The tech company. The party that develops and trains the foundational model is responsible for ensuring the lawful collection of training data.

From the AIGP ILT Guide - Foundational Models & Data Governance:

"Responsibility for the lawfulness of data collection typically lies with the party that trains the model- usually the provider or developer of the foundational model." AI Governance in Practice Report 2024 confirms:

"General Purpose AI providers are required to ensure that training data is lawfully acquired, including compliance with intellectual property and privacy requirements." The marketing agency is only a user or downstream integrator, not responsible for original data collection.

NEW QUESTION # 103

.....

Everyone has their roles in society, and they are busy with their jobs and family. So the time and energy are very precious for the preparation of AIGP actual test. While, now you are lucky. AIGP cert guide will give you some instructions and help you do study plan for your coming test. If you are a fresh man in this industry, do not worry, IAPP AIGP PDF training will help you. The questions and knowledge points are very simple and easy to get. You can download the AIGP test engine and install it on your phone. When you take the subway, you can open it and do test practice. To take full use of the spare time by AIGP test engine, you will enjoy a high efficiency study experience.

Exam AIGP Material: https://www.itbraindumps.com/AIGP_exam.html

You can practice our sample materials for free, you don't need to pay a cent unless you want to get complete AIGP exam materials: IAPP Certified Artificial Intelligence Governance Professional and trust us, IAPP AIGP Dumps Guide In an increasingly competitive social life, we should keep up with the unpredictable world, regain our knowledge, and pursue decent work and a higher standard of living, IAPP AIGP Dumps Guide Best of luck in exams and career!!

There are more, but I'm sure you get the idea, He loves the challenge Reliable AIGP Exam Cram of building web applications that look amazing while at the same time performing like an installed application.
